> south?

The deal with Hiwire isn't free. Clear Channel actually has to pay Hiwire for its "services". Recently, Clear Channel corporate has informed the stations that they will be responsible for those charges out of their own operating budgets. Many stations do not want to take the bottom-line hit. Others feel that they could make alternate arrangments that would be cheaper/better than Hiwire.

>I understand there isn't any revenue in streaming, but isn't there a setup that deals with those concerns?...Eliminates the problems of ads being sold by the station and being broadcast in areas where they shouldn't be...<

The deal with Hiwire (which CC owns a piece of) didn't fall through, but it also didn't address ALL the concerns.  Most notably, I suspect that Hiwire doesn't pay the music-performance royalties for its stations, and that's probably what quashed the deal.  Reality probably hit the CC finance folks once the royalty bills started rolling in.

Hmmm... When did radio become "free"?  I guess we have to ignore, program costs, promotion, utility bills, capitol costs, employees, services (ie. Marketron, Arbitron, Billboard, etc.) and debt service on purchasing that license in the first place.

There is a cost per listener that over-the-air radio has and it *is* cheaper than uni-cast streamed audio.  You can figure it can be as much as 10 to 1,000 times the cost of over-the-air broadcasting depending on how you build out your streaming infrastructure and your over-the-air costs.  If you want to cover your costs then it makes more sense to do what KPIG did and offer the service as a subscription.

I think CC and others that are pulling stations off the net are a bit near-sighted as they should be seeing it as a device for promotion for much the same reason they develop web sites.

Steve....I heard some mention about a year ago, that Clear Channel owns some part of Verizon. This may not be true.....but it would not surprise me at all. I just looked at their site http://www22.verizon.com/?loc=GN  and it looks suspiciously like many of the CC pages!

[ Moderator's note: nope, Clear Channel Entertainment ownes the venue in Kansas City, and Verizon just apparently purchased naming rights. ]

>
> But with Northcoast PCS, there is no airtime. Northcoast provides flat-rate unlimited local calling for $35 per month, much like its counterparts MetroPCS and Cricket in other parts of the country. So what if it's a free call? On Northcoast, you wouldn't be paying airtime for the call anyhow!
>
> Compare and contrast with WKDD in Akron, which is owned by Clear Channel. Their number #981 is set up on Verizon Wireless's network. I haven't asked, but I'm pretty sure those calls aren't being put through for free. Verizon doesn't do all that much advertising on the station; nor did Airtouch, VZW's predecessor in northeast Ohio, so I would question the value of doing a trade-out.

I think you missed his point. Nowhere on your website do you indicate which radio station "The Last Radio Station" is. I believe he meant broadcast stations that also webcast, not Internet-only "stations." Reread his message:

My information, which comes from someone who works for Clear Channel,
is that the Hiwire contract has expired.

Most CC stations ceased streaming within the past week, although the
decisions are made at the local level and some continue to stream.

Those dial star-something things are, as far as I know, always dealw witht
he cellular company in exchange for the mention on air. They are advertising
deals, generally hated by PDs. Whatever the individual deal done with the
station and the carrier, the thing is commercial.

Nope. It is paid by the carrier. The programming department at the staiton
probably hates the added clutter of the mentions. The sellers probably think
they have invented the promotion strolke of genius of the year, too.

CC's is a national trade, as I gather it.

Oh..ok. thanks! They must do that a lot. I noticed in Charlotte, NC they do
it there too.

It's actually not a trade. CCU does not really benefit by having a button on
a cell phone service that may only reach 5% to 10% of the market. The
cellular company does benefit, mostly through all the top of mind enhancing
messages all day long.

Verizon doesn't do all that much advertising on the
> station; nor did Airtouch, VZW's predecessor in northeast Ohio, so I
> would question the value of doing a trade-out.

You wouldn't necessarily want to do a trade-out with a cash-paying customer. Ideally you would do the trade with a non-advertiser, thereby not reducing revenue.

Then why would CC do a major regional buy (as they have here) with AT&T Wireless...especially when Verizon is the OTHER legacy cellular carrier in the region?

That couldn't be *the* Joe Franklin who became a late-night fixture on
New York TV, could it?

I know of no cost in radio that is a function of the number of listeners
one reaches. The costs of programming, sales, engineering, etc. are much
the same whether there are 10,000 people tuned in or 100,000.

Streaming, of course, is a different animal altogether.

The Clear Channel concert venue in Indianapolis has been named "Verizon Wireless Music Center" for years.
Clear Channel does not own any of Verizon't stock, but they have had long-term naming contracts for some time.
As for the *981 phone numbers, they are generally provided to the station at no cost in return for the mention, "or call Star Ninety-Eight One on any Verizon wireless phone".

The very same.  Joe Franklin now hosts a music show on WOR-Radio 710 Saturday night into Sunday morning starting at midnight.

Why did Martin Block get death threats? Was he really a nasty guy?

>I think CC and others that are pulling stations off the net are a bit near-sighted as they should be seeing it as a device for promotion for much the same reason they develop web sites.<

If you think they're so "near-sighted," then *you* offer to pay their streaming bills.  A "device for promotion" that costs the price of several limbs of the human body, and that returns not one thin dime from that investment, is doomed before it even gets off the ground.  Broadcasters are, first and last, business people...and as a business model, streaming is, right now, a loser.

Some programming providers charge based upon listenership.

That said, no matter how you slice it, there is a cost-per-listener in radio. No one ever said that such cost did not go down as the number of listeners increased.

I'm searching for any on-line training course on webcasting (Internet radio broadcasting).

I have searched through the Web but I can't find any one.

Hope some of us at this newsgroup can give me some references.

Thank you in advance.

anyone in the chicagoland area that was pissed that energy 92.7&5 got slashed can get their groove back on, b/c "party 103.1fm" is becoming the new dance hits radio station.  it is even being ran by the same guy that did "energy 92.7&5"

article:

Concurrently, WYXX/Morris, IL � which Big City still owns - drops its simulcast of Viva and brings back the dance-oriented programming that had been airing on WDEK, WKIE & WKIF/Chicago until Jan. 6, when SBS began operating the trimulcast via an LMA with Big City and flipped the trio to Spanish AC. WYXX is now billing itself as "Party 103.1" and is being overseen by former WDEK, WKIE & WKIF PD Chris Shebel. WYXX is still on the block, and it is not known if or when Big City will divest the property � its last.

Amateur Radio Newsline™ Report 1327 – January 17, 2003

Amateur Radio Newsline report number 1327 with a release date of Friday, January 17, 2003 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Australian telecommunications regulators oppose the Amateur Radio fix for 40 meters and hams on Fiji provide aid in the wake of cyclone Ami.  These stories are first on Amateur Radio Newsline report number 1327 coming your way right now!

(Billboard Cart Here)

**

SPECTRUM ISSUES:  AUSTRALIAN REGULATORS FAVOR 40 METER STATUS QUO

A disagreement over the future of the 40 meter band between Australia’s national amateur radio society and that nations telecommunications regulators. The Australian Communications Authority -- the A.C.A. favors the status quo. The Wireless Institute of Australia says its time for a change.  From Brisbane, Q-News Graham Kemp, VK4BB, picks up the story:

--

The 7 MHz issue.  Currently A.C.A. is against the motion at WRC 2003 -- which is of course at variance with the current allocation in Australia.  At present the A.C.A. are steadfast in their opposition to the motion  notwithstanding numerous attempts at lobbying them.  The WIA position is in support of the IARU motion and WIA will continue  to lobby A.C.A. to support the full 300 kHz allocation at 7 MHz on a world wide  basis.

WIA President Ernie has asked: "If anyone can think of any additional justification that we can provide to A.C.A. to make them change their minds please let the A.C.A. Liaison Committee know and we will try and push the matter with A.C.A. again".

--

What impact the A.C.A.’s stand will have on the outcome of WRC 2003 cannot be assessed at this time.

**

## RESCUE RADIO:  CYCLONE AMI HITS FIJI

A Cyclone named Ami has torn across parts of Fiji, destroying  homes and unleashing floods across northern islands.  And it appears that once aghain, Amateur Radio has come to the rescue,  It all happened on January 14th. Amateur Radio Newsline’s Jim Meachen, ZL2BHF, has what we know so far.

--

Packing sustained winds in excess of 90 miles per hour and gusts of 125 miles an hour, the Cyclone Ami whipped up mountainous seas, cut communications and left the  tourist hub of Labasa, on the main northern island of Vanua Levu, under four feet of water.  All normal lines of communications with Vanua Levu were cut at about 17:00 GMT as the storm approached. Vanua Levu is where a quarter of Fiji's 800,000 people live.

According to news reports, emergency officials did manage to restore partial communications with Labasa and the town of Savusavu late on Tuesday using Amateur Radios circuits.  Over them they learned that Labasa was under four feet of water after a nearby river overfload its banks.  Also that there had been extensive damage throughout the area.

But even these communications efforts were hampered by extensive flooding. Also, the extent of the involvement of hams is still unclear since news reports did not give the names or call signs of the operators handling the emergency operations.

Here in New Zealand the government has already sent an air force surveillance plane to assess damage.  Another aircraft was scheduled to arrive in Fiji the same day and, carrying aid experts and some relief supplies.

For the Amateur Radio Newsline, I’m Jim Meachen, ZL2BHF, reporting from Auckland, New Zealand.

--

The cyclone is the second to hit the South Pacific in as many weeks. Thousands of inhabitants of a remote part of the Solomon Islands chain northwest of Fiji survived powerful Cyclone Zoe, which hammered the area with 190 mph winds.

**

## RESCUE RADIO:  HAMS AID IN WAKE OF TYPHOON ZOE

And speaking of Cyclone Zoe, ham radio is helping in recovery efforts following that storm after it hit the Solomon Islands a few weeks ago.  Jeramy Boot, G4NJH, is in Nottingham England has more:

--

Students and graduates of the Solomon Islands Amateur Radio Training School have been on the air from the capital Honiara in the wake of Cyclone Zoe.

The storm hit the islands of Tikopia and Anuta in the Solomon's remote Temotu Province last week. The amateurs are volunteers at the National Disaster Management Organisation and are providing assistance to the staff of three at NDMO HQ during the current state of disaster in the Solomons.

Using donated equipment received last year fromoverseas amateurs and CB operators, the first on the air was Moffet, H44MD. He was told that three 100-watt HF transceivers were donated by an American amateur and sent by air mail three weeks before the cyclone.

--

As we go to air, reports say that the Solomon Island radio school graduates are still providing post cyclone aid.  (GB2RS)

**

COMMUNICATIONS LAW:  BIG BROADCAST TOWER WIN IN NH

Back here in the United States, a big tower case win for a broadcaster could have a trickle-down effedt for ham radio.  This, after the New Hampshire Supreme Court has rejectes a city's zoning ordinance limiting the height of new communication towers to 42 feet.  It says that regulation conflicts with federal law.

The ruling clears the way for Koor Communication Inc. to obtain local construction permits to begin constructing broadcast towers for WQTH-AM in Lebanon, New Hampshire.  According to Radio World Online, Koor Communications first filed for variances to the ordinance in 1999 seeking to construct four antennas to the height of 266 feet in accordance with its FCC license and Construction Permit.  The broadcaster's attorneys argued that Lebanon's restrictions effectively prohibited the construction of new radio stations.

Koor Communication lost several lower court decisions.  This lead to the appeal to the state's highest court.  That court has now said the lower court findings were incorrect and it reversed their rulings. (CGC Commuinicator, RW-ONLINE)

**

ARRL:  BOARD IS MEETING

The American Radio Relay League's Board of Directors is holding its first meeting of 2003 as this newscast goes to air.  For a full wrap-up on what actions the Diirectors might take, go to the news pages on the ARRL website. Its easy to find at www.arrl.org.  (ARRL)

**

ENFORCEMENT: HAM JAILED FOR SPYING FOLLOW-UP

Two interesting follow-ups to last weeks story on convicted spy Robert Hanssen, K9QVL.  The first came in a note from the FCC which takes issue with our account.

It says and we quote: "the assertion that we need a complaint to pull Hansen's ticket or anyone else's ticket is dead wrong."  Endquote.

But thats all the spokesman says.  No other information was provided.

The other item is even more interesting.  After the story ran, we began getting reports that Hanssen's call had been deleted.  We went over and checked the FCC's database.  It was still there.  It was also on the Buckmaster websire, but ther was a surrprise when you inputted the K9QVL call over on QRZ.com.  It came back stating that the K9QVL listing was no longer in the QRZed database. (ARNewsline™)

**

ENFORCEMENT:  FCC RESCINDS ND8V WARNING LETTER

The FCC has canceled its recent warning letter issued to Michael Gurnsey, ND8V, and has told the Parchment Michigan ham he can resume operation on the 20 meter band.

As reported last week, the agency's Riley Hollingswoth, K4ZDH,  had written a very sternly worded letter to Gurnsey.  It stated that it would initiate stern punitive action against him if it received any more complaints that he was appropriating certain frequencies on the 20 meter band.  It also told him to stay off 2o meters until the issue could be resolved.

But on January 3rd the Hollingsworth wrote to ND8V once again.  This time it told Gurnsey that he could disregard the warning letter and resume 20 meter operation.  It also went on to thank him for his cooperation in resolving the matter.  No further information was provided by the FCC.  (FCC)

**

## ENFORCEMENT:  NY HAM FACING REVOCATION

The FCC has written to a New York city area ham telling him he may face license revocation proceedings.  The Commission’s Daryl Duckworth, NN0W, explains:

--

Duckworth: “A Warning Notice and Notice of Intention to Designate a Revocation and Suspension Proceeding was issued to Alexander Sandbrand N2NNU for operation outside of his Technician class priveleges on numerous occasions and after warnings.”

--

Sandbrand lives in Yonkers New York.  That's a few miles due North of Manhattan.  Back on August 17th of 2001 the FCC issued Sabndbrand a first Warning Notice regarding operation outside of his license privileges.  The Commission says it now has information indicating that at least nine times since his receipt of that initial warning that Sandbrand operated out of band.

And in a related item, the ARRL Letter reports that Sandbrand called FCC rulers enforcer Riley Hollingsworth after receiving the first Warning Notice.  He reportedly complained that it wasn't fair that he had to pass additional examination elements to operate on High Frequency phone.  Hollingsworth supposedly told Sandbrand that if he wants to operate on H-F, he has to take the test like everybody else.  (FCC, ARRL Letter)

**

## RADIO LAW:  TEEN ARRESTED AND CHARGED IN DIREC TV CASE

A 19-year-old college has been taken into custody on charges that he pilfered information about a new security system used by satellite broadcaster Direc TV and distributed it over the Internet.  FBI agents in Los Angeles say that they arrested Igor Serebryany and have charged him with stealing information related to DirecTV's latest access cards.  These are the access cards Direc TV uses to regulate what services its subscribers will receive.

According to several news reports, Serebryany who is identified as a University of Chicago student, allegedly took the information from a Los Angeles area law firm that was doing legal work for Direc TV. He ithen is supposed to have distributed it to web sites dedicated to the hacking of DirecTV's security systems.

According to the criminal complaint against Serebryany, DirecTV spent more than $25 million developing the high security "Period 4" card.  This, after the three previous versions had been successfully hacked by pirates.  Serebryany faces up to 10 years in prison, a fine, or both, if convicted.  (Published news reports)

**

## RADIO LAW:  FCC SIMPLIFIES FILING PROCEEDURES WITH ECFS EXPRESS

The Federal Communications Commission has launched ECFS Express. This is a simplified version of its Electronic Comment Filing System or ECFS.

According to an FCC news release, ECFS Express is designed specifically with the consumer in mind. The FCC claims that it is easy to use, focuses on topics rather than docket numbers, and requires minimal input by consumers seeking to participate in the Commission's public rulemaking process. People wishing to comment simply click on a topic, fill in their personal information, write their comments and hit "send."

To access ECFS Express, users need only click on the "File Comments" logo found on the front page of the FCC's Web site at www.fcc.gov The original version of the Electronic Comment Filing System, which includes all docketed Commission proceedings is still at the FCC website as well. (FCC)

**

COMMUNICATIONS LAW: A WARNING TO DOMAIN NAME SELLERS

A warning to Internet domain-name sellers. Keep better track of your customers or Congress will be forced to step in.

The warning comes from California Representative Howard Berman. He claims that domain-name sellers have an obligation to keep accurate records of their customers to ensure they can be contacted if they are improperly using trademarked names or engaging in other illegal activity.

According to Berman. Internet users must provide a contact name, address and other information when they buy a domain name. But the Congressman says that few name sellers run checks to make sure that the contact information is accurate. Berman says that this lax oversight allows scam artists and cybersquatters looking to sell domain names to their rightful owners or others to hide their true identities. This he says, provides a barrier for law-enforcement officials investigating such crimes.

Berman says that he would like to see all the top-level domains start to implement these types of checks on their systems. He also warns that if self regulation does not work that Congress may have to step in. (Published news reports)

CONVENTIONS AND HAMFESTS: VIENNA VIRGINIA IN FEBRUARY

Turning to the hamfest and convenbtion scene, if you are in or near Vienna Virginia on Sunday, February 23rd, 2003, then plan to stop by the Vienna Wireless Society's 27th annual Winterfest. The venue is the Northern Virginia Community College in Annandale. Look for lots of equipment along with helpful information on how to get started in the hobby. More information is in cyberspace at www.viennawireless.org (KG4OJT)

**

## CONVENTIONS AND HAMFESTS: HAM-EX 2003 CANADA IN MARCH

A bit to the North, the Ham-Ex 2003 exposition is slated for March 22nd at the Brampton Fall Fairgrounds in Brampton, Ontario, Canada. Sponsored jointly by the Peel and Mississauga amasteur radio clubs the March 22nd event will feature manufacturers displays, equipment vendors, Canadian ham radio exams and everything that goes into a great hamferst or convention including a gala banquet and lots of prizes. For more information please visit the shows website. Its in cybersace at www.peelarc.org (press release)

**

## BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org and being relayed by the volunteer services of the following radio amateur:

(5 sec pause here)

## THE WAR ON TERRORISM: NYC REBUILDS WITH A NEW TV TOWER IN NEW JERSEY

A broadcast tower almost a half mile high to replace the structure lost when terrorists felled New York’s World Trade Center could rise across the Hudson river in New Jersey. This, as an alliance made up of eleven broadcasters release a report as to why they favor proposed site in Bayonne over one in Jersey City. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has more:

--

In a 17-page letter to New Jersey's environmental commissioner, the broadcasting alliance says the new tower would restore quality television reception for about three quarters of a million people in the metropolitan area. This is especially important to the regions poor and elderly who cannot afford to pay for cable or satellite reception. And the alliance called the Bayonne site far superior in terms of size, security, environmental concerns, cost and construction timetables.

And the groups president, Edward Grebow said the $200 million project would also be a boon to construction workers in the region. He also noted that the city of Bayonne wants to make the tower a central element in plan to transform the location into an area of offices, homes, stores and marinas. In addition to its television antenna system, the alliance suggests that the structure might also be used for scientific studies. This could include long term investigations into weather, climate and air pollution.

If constructed the new tower would not only become the world's tallest free-standing structure. It would also be the worlds tallest broadcast tower built at near sea level. For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.

--

While New Jersey has the support of the regions broadcasts, other locations are still believed to be under consideration by local politicians and community leaders.  (ARNewsline™ from listener reports)

EMERGING TECHNOLOGY:  GENERATING ELECTRICITY WITH HOT AIR

Meantime, another would-be tallest man-made structure could soon be towering over the Australian outback.  This, as part of a plan to capitalize on the global push for greater use of renewable energy.

By 2006, the Australian power company EnviroMission Ltd hopes to build a 3,300 foot high solar tower in southwest New South Wales state. The 200 megawatt solar generating station will cost nearly $563 million dallars to build and will be the width to a football field.

The technology behind its operation is very simple.  The sun heats air under the tower’s glass roof.  As the hot air rises, a powerful updraft is also created by the tower that allows air to be continually sucked through 32 turbines, which spin to generate power.

EnviroMission hopes to begin construction on the solar tower before the end of the year.  It says that it plans on generating enough electricity to supply 200,000 homes around the beginning of 2006.

Currently, the world's tallest free-standing structure is the Canadian National Tower in Toronto. Its about 1650 feet high.  (W8HDU)

CHANGING OF THE GUARD:  DON MACKAY, ZL3RW -  S.K.

The changing of the guard in Amateur Radio continues.  This, with word that NZART Honorary Life Member and Past President Don Mackay, ZL3RW has passed away.

MacKay died at his home in Christchurch on January 14th after a long illness. Among his many accomplishments was his  work in the introduction of Amateur service repeaters to  New Zealand.  This, at a time when that nations Post Office was opposed to such operation.

ZL3RW used his experience in emergency communications to sway the agencys decision in favor of permitting repeater operation.  For many years it was this aspect of Amateur Radio that ensured their continuation.

Don MacKay is survived by his sister Margaret.  A service in celebration of his life was held Saturday January 18th in the city of Christchurch.  (NZART)

**

## HAM RADIO IN SPACE:  NO PACKET TO THE ISS

Packet users are being requested to not send e-mail messages to the all ham crew on board the International Space Station at this time.  This, according to the AMSAT News Sercice which reports that they are not answering e-mail, and are realkly not expected to do so in the near future.  No specific reason was given, but according to news reopprts the current all ham crew is very busy with many non ham radio related on-orbit duties.  (ARISS)

**

## HAM RADIO IN SPACE:  ISS ALABAMA EXHIBIT FEATURES HAM RADIO

Ham radio will play a part as the City of Mobile, Alabama is hosts a four month exhibit of the International Space Station.  This at the new Science Exploreum building.

The exhibit consists of a full scale mockup of the main parts of the ISS along with other aspects of living and working in space.  According to N4UXY the Mobile Amateur Radio Club " W4IAX " will host a ham radio station that will attempt to talk to the real space station durinvg the exposition.  The club also plans to demonstrate other aspects of the Amateur radio to an expected 80,000 visitors.

The show began on January 9th and ends on April 5th. More information is on the web at www.exploreum.net  (N4UXY)

**

## CONTESTS:  2003 WINTER 6 METERS CONTEST

The 2003 winter 6 meter contest is will commence at 2300 U-T-C on Friday February 7th and conclude at 03:00 U-T-C on Saturday February 8th.  The rules are very simple.  Each in-country QSO is worth one point.  Out of country contacts score as two points.  Hawaii and Alaska count as separate nations in this one.

Scoreing is total Q-S-O points multiuplied by the number of grid squares worked.  Entries go by e-mail to w4wrl@aol.com before March 15th.  They can also be sent snail-mail to Wayne Lewis, 3338 South Cashur Drive, Florence, South Carolina, 29501.  (VHF Reflector)

**

## DX

In D-X, PA3GIO will be active as ZK2GI from Niue from about the 18th to 26th of January.  He will operate SSB only with 100 watts and a dipole antenna.  If you work him, Q-S-L as directed on the air.

Also, KM1E is active from the Bahamas as C6AGN.  He’s on 160 through 6 meters from now through the 4th of March.

And lastly, some good news about famed D-X’er Ron Wright ZL1AMO who suffered collapsed lungs in late November.  According to Judy Rausch, AA7UC, of the

International D-X Network, Wright returned to his home on January 13th to complete his recocery. (AA7UC, INDEXA)

**

## THAT FINAL ITEM: CELEBRATING A NEW LICENSE CLASS

And finally, a big success for a big operating event celebrating a new license. That’s the word out of the United Kingdom as reports on the first ever Foundation Class Q-S-O party begin to filter in. Again to England and GB2RS news presenter Jeramy Boot, G4NJH:.

--

The M3 'QSO Party' on 40 metres on the 1st of January was a huge success with hundreds of newly-licensed M3 amateurs and their friends wanting to take part. Richard Jolliffe, G3ZGC, said: "I planned just to join in but when I switched on there were two M3s looking for a net controller. So as one of the Newbury club's Foundation Licence instructors I volunteered.

The pile-up was certainly the largest I have ever heard and I had to go to letters in the suffix and ask for M3 Alfa stations and work through the alphabet. In two hours I worked 112. At least half as many again were 'gotaways'."

Richard added, "What was very noticeable was that the standard of operating was fantastic by the M3s. It was noticeable how appreciative most of them were at having passed their exams. Many messages of thanks were passed to their local clubs. An excellent event."

Douglas Nixon, M3BKC, was one of the numerous Foundation Licensees joining in the fun. He said, "Richard did a splendid job as net controller during the hectic conditions that followed at times during the next two hours. Roger, G4RUW, also from Newbury, took over at 1200, followed by John, G4TSN, from Nottingham. Many thanks to all concerned."

Jeramy Boot, G4NJH
--

Obviously, the concepts behind the U-K Foundation Class license are rock solid and it is most likely the way other nations will go as they seek too increase participation in the hobby. (GB2RS)

For sale:

The "Radio Crazy" is back. No "AM bashers" or negative nabobs!

Joint venture. Now come all before the dishonorable Meyer Gottesman and pay tribute. HI!

Partial ownership of 1 KW fulltime AM in small NE Mississippi city for sale.

Active or inactive investors with at least $10,000 are welcome. You can NOT own more than 49 percent. That rule applies to the "Radio Crazy" also!

All investors would be on the board with full voting rights.

The total asking price is $85,00. NO repeat NO real estate is included. You heard it first here, kiddies!

Station is on the air over 50 years. I guess that qualifies it to be called (a) A junk heap? or? (b) A legacy station.   Ahhhhhhhhhhhh (b) is more politically correct! HI!

Just because I am poor doesn't mean I can't also be stupid!! HI!

Tel: (478)741-1710. Macon, GA. Eastern time.

We will accept funds only from those who have it!

73,

Meyer Gottesman

For sale:

The "Radio Crazy" is back but this time with an FM deal!

Partial interest in class "A" FM in Arkansas for sale. (Joint venture).

Active or inactive investors with at least $25,000 each are welcome. All investors would be on the board with full voting rights if desired.

The total asking price is only $195,000 and there IS real estate included. To my knowledge, this is the 2nd cheapest asking price for any commercial FM on the market in the nation!

Station is class "A", 6 KW ERP. Was billing about $12,000 a month in its "heyday". TBA (Formerly called LMA is possible).

Tel: (478)741-1710 in Macon, GA or email of course.

Those interested will get the city of license. It is in N. Arkansas in a beautiful region.

73,

Meyer Gottesman, W6GIV

HI,

I`m looking for information and tips about splitting and combining few power amplifiers in range from 80-120 Mhz. Power is about 300-500W for amplifier.

Input signal from driver stage must be divided to 2, 3 or  5 power amps and than combined again for output to antenna system.

Any information about software, strip-line design or any alternative is welcome.

Thanks in advance..

Here's a more complete story on the changes at what were Big City's stations as the company slowly sinks in the west:

At the beginning of the month, Big City sold its Latin AC WXXY (Viva 103.1) to Hispanic Broadcasting Company.  HBC's operating the station until the sale goes through and has also started simulcasting the station on its WLXX-AM, the former tropical-format station.  HBC also owns WOJO (Que Bueno 105.1) and WIND (La Tremenda) in the Chicago market.  As indicated, WYXX, the southwest end of the Viva metrocast, was not included.

At the same time, Big City sold its WKIE, WKIF and WDEK stations, the dance music "Energy 92/7 and 5," to SBS.  The stations are now carrying a Spanish CHR format called "La Nueva Onda," which must be pleasing the people at WDEK COL DeKalb to no end (but I guess reaches the Rockford market).  Meanwhile, WYXX has flipped to dance music until--well, here, according to www.djheadlines.com, are actual liners the station's using:

Streaming until whenever somebody buys us!! - PARRRRRRRTY 103.1

No commercials 'cause we're for sale! PARTY 103.1

PARTY 103.1 - No requests, No DJs, Uh...Just Songs!

And (especially apt considering COL Morris is a rural community):

There's nothing wrong with your cow! Cows milk better with Party 103.1! Mmmooooo...

Could this be the beginning of more marginal clusters being broken up around the country?  Stay tuned...

>who can tell me what a "cue scratch" is? What did Gates make? How about
>Sparta? Why would you find a board with nails sticking out of it in the
>newsroom? What was "Pulse?"

Let's see: electronic tape editing, as I remember it, was punching record at the edit point. A cue scratch was when a cut's start was scratched from cueing. Gates made almost everything for broadcast -transmitters, turntables, processing, consoles, etc. Sparta made cheaper versions of the same thing. The board of nails was to hang news copy. Pulse was a rating service.

What do I win?

Rich

My first job as a DJ in commercial radio was at a directional AM station and in those days the F.C.C. required someone in possession of a first-class license to operate a DA.  I didn't have one.  So they paid someone who did to babysit me.  He mostly snoozed and pencil-whipped the required transmitter readings at the end of his shift.  It was a joke.  I was perfectly capable of operating all the equipment.  This was unnecessary, even in 1965.

You obviously go back farther than I, and I just told you how far back I go.

A station I worked at was non-directional during the daytime and switched to a directional night pattern after sunset.  Since a 3rd class license was all that was required when the station was operating in non-directional mode, they didn't feel it was necessary to pay the premium that guys with a 1st class license received when the station was on at night.  Therefore, despite having a "first phone," I got $3 an hour when the sun was up and $4 an hour only after switching to night pattern.  Cheap bastards.

Great to see the original, Jim.

This was brought to my attention when a friend showed me a link to a post
from WNIC's Chris Edmonds on http://www/keener13.com/agingdj.htm

Thanks!

Kevin Sanderson

Didn't know just when to jump in, and my newsreader has killed all the previous messages in this thread, so this is as good a place as any...

Cue Burn, fairly obvious to any of us who ever used a turntable (could have been made by gates, by the way).

Electronic editing, Ok, I'm guessing the questioner means "punching in" with the record button on a specific track at a specific point on a r to r tape.

Razor blades and tape...still have em, although they're very dusty.

Tones on tape, would that be the tertiary or secondary tone?

Anyone old enough to remember the old MAGNECHORD cart machine?  If you're an old-timer you may even remember the Magnechord that was 36" tall, 24" wide and played ONE cart.  (might be a slight exaggeration, but working from fried memory here).

Gates, of course a broadcast electronic company that made everything from transmitters to turntables. Sparta made some of the same products, only junkier.

Here are a couple of new questions to add to the topic(s).

Do you remember the first time you used or saw...

LIVE ASSIST COMPUTER? (eg "smarts", "Audisk", etc)
SCHEDULING SOFTWARE? (eg "century 21 super scheduler")
COMPUTER GENERATED SPOT LOG? (original 'darts', etc)
CD PLAYER?
MINI-DISC?
DAT?
AUDIO EDITING SOFTWARE? (eg. original version of SAW)
AUDIO STORAGE ON HD? (eg original B.E. AudioVault/Core, Audisk)
FIRST EXPOSURE TO 9 gb Hard Drive? (we could 'never' fill one of those up! haha)

My how times have changed since my first on air gig back in '79.

Rick "DaVoice" Charles
who was 15 when he started, so not old!

|
| Likewise, except it was all cheap junk.

I wouldn't say that all of it was. The quality varied widely, even among individual samples of the same product. One station I worked for still is using one of two four-pot mixers (for remotes and such) and has a Sparta 1 kW transmitter as its backup. In 1980, that transmitter was replaced with a Gates MW-1A, which has since been given a sendoff because it was so awful (at the end, it was unable to manage >65% negative modulation).

On the other hand, when the present owner of that station bought it about ten years ago, that owner, a longtime friend of mine who knew about the Sparta cart machine that had been in the newsroom, gave me the pleasure of personally destroying it.

Mark Howell <geezer@radio411.com> had written:

| My first job as a DJ in commercial radio was at a directional AM
| station and in those days the F.C.C. required someone in possession of
| a first-class license to operate a DA.  I didn't have one.  So they
| paid someone who did to babysit me.  He mostly snoozed and
| pencil-whipped the required transmitter readings at the end of his
| shift.  It was a joke.  I was perfectly capable of operating all the
| equipment.  This was unnecessary, even in 1965.

Even as late as 1985, KTRH in Houston (50 kW, DA-2) had first-licensed ops *at* *the* *transmitter*, pulling 12-hour shifts. I don't know whether the FCC had rolled back the first-ticket requirement by then. I think it was sometime around July or August that the ops were reassigned to duty at the Houston studios.

When this happened, you would think the backup would have been a phone line (remember, this was 1985) so at least audio would have gotten on the air.

No...the backup was two reels of tape of easy-listening music.

This became a major cause of embarassment when a 79-cent capacitor in an audio processor failed...at 6:30 in the morning. On a weekday. Drive-time for an all-news station. On that day, instead of the KTRH news wheel, there was...music. Really, really bad music.

A couple of people lost their jobs over that one, notable even for a station whose calls were often referred to as "Keep Those Resumes Handy".

They may have had a critical array. These had to have ops on dutuy at least through the late 70's. Not sure about the 80's.

I remember the Magnecord cart machine, but I never worked at a station with one.
I had a friend that worked at a station that had one (still in use in 1970) and I saw it there.
The oldest I personally used were Spotmasters: You slammed the cart into the machine, cocked the trigger (that raised the pinch-roller into position)

then hit the START button to fire them. We were fortunate that they did have remote start buttons on the console.

I read this on an earlier post but I will also admit that I, too worked at a station that had a 3-bay BE cart machine and all 3 decks were wired into the same pot on the board. If the heads got dirty and missed a cue tone, the cart cycled in the machine and replayed the spot on the air. Also, when they returned back to the start and shut off, you could hear it on the air if a quiet spot/record was playing at the time.

Why do we complain about Audio Vault, Prophet and Enco? I have been on the air for almost 30 years and today's equipment is easier for the jock, easier for the engineer and easier for the owner (cheaper than those "hardware" automation systems).

So why do we refer to those days as the 'good ole' days??

Critical against then-CBL, but not against KRMG or the 1 kW in Texarkana. I believe the first-ticket on-site requirement had been dropped in 1983 or 1984.

Actually it was only the nighttime pattern that was critical. The daytime pattern had been changed about 25 years earlier to improve the signal in "deep east" Texas. That may also have been around the time the array was moved from Baytown to Dayton (its present location).

Now the station at 1070 (is it KENR again?)...*that* was a critical array.

Because we were younger then.  Life seemed simpler and we weren't as jaded as we are today.  Things weren't as easy then, and in small stations things were sometimes damn near impossible.  But we all took pride in our work, and it took some ingenueity to get it to sound good.  Working through a stop-set with only one working cart machine and making it sound seamless.  Nobody wants to to that, but I have done it, as I suspect others have in this group.  The kids today couldn't do that, nor would they be expected to.  I worked in the business from 1979 to 1993, and some of my fondest memories are of the little two-bit stations where I started out, where we tried to sound like WLS but with no decent equipment (or talent).

And as the original post in this thread stated, most of us knew the owner. Yes, today's radio station is certainly more efficient and easier to operate, but not everything is better today.  Today's corporate outpost stations often do a lame job of things like covering local severe weather, and local radio news where I live is limited to reading a few stories out of the newspaper, or maybe a press release or two.  Thank you Cumulus and Clear Channel.

I'm a DX'er with technical interests, including calculating AM patterns.
The old WMEX 1510,
1941 to 1978, operated from North Quincy, MA, at about 42:16:29, 71:01:54
(read from USGS map).
Does anyone know the antenna parameters  (ratio, height, phase, spacing &
orientation)?
I belive it was 50kd/5kn and 4 towers.
I hope to graph the pattern & compare with current (many re-incarnations
later, at Waltham site) pattern.
Thanks in advance.

For the money, I would go with the Omnia 3. One station I take care of has
the 2200, another the Omnia 3. The Omnia 3 is a much better value and can be
made to sound very loud. I would put ot head to head with a 5 band 8200 any

day. We had the 2200 before the Omnia 3 came out or both stations would have
had it instead. Good luck,

Kevin Berlen

I've been in radio for several years, managing and owning but sat many hours with my father, educated at Emerson Radio School, had all necessary licenses and still only sat behind a mike while cuing an engineer through a glass window in another studio.  Now that's Ol' Time Radio...lol

I dropped a manned site for a 4-tower array in '75. The issue was stability
of the array.

A critical array had to be held to tighter parameters (% maximum varience
from licensed values) than some; again, stability in maintaining parametrers
was the issue.

Also called "cue burn." :)

In wonder if this was more because of the heavier tone arms used back then. Nowadays a good tonearm can track at 1.5-3 grams.

Heh-heh. Remember taping a penny to the tone arm so it wouldn't bounce around on a slightly warped record?

Pulse was a ratings service which competed with what is now known as Arbitron. (At the time it was simply, ARB -- American Research Bureau.) I don't know if Pulse was nationwide but I thought it was. I believe the methodology was approximately the same but the numbers would be wildly

different from the ARB numbers in the same market. Pulse was around for
quite awhile, I think.

>>
Does anyone know the antenna parameters (ratio, height, phase, spacing & orientation)? I belive it was 50kd/5kn and 4 towers.
>>

It only takes two towers for WNRB to protect WLAC and KGA with 50 kW nights.

The other two of the four present towers are there to protect a non-existent, but "notified" station in Canada.

WNRB (ex-WMEX) protects WLAC to about 75 watts, equivalent and KGA to about 50 watts, equivalent, nights.

WNRB protects the non-existent Canadian station to about 10,000 watts, equivalent, nights.

WMEX is the "historical" occupant of 1510, as is KGA, with respect to WLAC.

WLAC, although it is indeed of higher class than WNRB, is not "historical" with respect to WMEX.

WLAC protects WNRB to about 200 watts, equivalent, and KGA to about 90 watts, equivalent, nights.

KGA protects WLAC, and only WLAC, to about 90 watts, equivalent, nights.

WMEX's night operation in the 50's was indeed 5 kW.

Pulse predated ARB. They had a national service in major markets, and would
also do "quick surveys" of markets for one station.

Hooper predated Pulse. I recall Hooper going away in the early 70's, maybe in '72.

Pulse used a door to door (and later, telephone) 24-hour recall method of picking up data.

In September, 1963, ARB announced its first radio market measurement, Detroit, for sometime in 1964. The method was the diary, as we know it today.

Pulse folded in 1978, I believe. The last book to be issued was San Juan, Puerto Rico.

I had one of those; picked it up used in the late 60's for about $100 just for the heck of it to see how it worked.

Another favorite was the 55 cart vertical elevator in early (60's) automation gear. For the uninitiated, it had a vertical rear-fed rack for 55 carts, and a vertical, spiral grooved shaft in the front along which a motorized deck went up and down and picked carts to play. Any cart that somehow moved foreword (such as with vibration, etc) got sheared off by the elevator mechanism as the machine operated. A number of times I had to remove pieces of a shattered cart and scads of tape from the mechanism.

Who remembers the Ampex Cue-mat from the early 60's? Competition for the tape cart, the Cue-Mat was essentially a 5" floppy disk without the plastic sleeve. You fed the magnetic disk in, and it cued and played like a cart, without the moibus loop and all the evils that the loop presented. I first saw one at KYA in about 60, and I assume it was a prototype as I understand the device was not put on sale until several years later.

Wonder why they didn't just use the disk with a sleeve? I would have
provided more protection for the disk....

My first job in radio was at a station that did not have cart machines.
Instead, they had three Magnacord PT-6 tape decks that had remote start
switches at the console. Spots were on reel-to-reel tape.

As I recall these machines were anything but gentle on tape. They could stretch a piece of Mylar tape in an instant, making it nice and round like a piece of spaghetti.

I later jumped out of the frying pan into the fire, taking a job at a place that had a pair of Ampex "Cue Mat" machines. Anyone remember them?  They uses a huge "floppy disk" about 12" in diameter, which you stuffed into a slot.  The disk turned like a record, and a head read the information.  At least it did that sometimes….  When the disks got old and dirty, creased or otherwise deformed, these machines sounded like they were playing under water.  It is probably a good thing that these things never became popular.

Chuck

Seems obvious now, but this was in the very early 60's.

Sven ...

<<In wonder if this was more because of the heavier tone arms used back then.  Nowadays a good tonearm can track at 1.5-3 grams.>>

That was part of it.  The other part was the relative crappiness of the vinyl  used to manufacture the record.  IIRC, Motown and Tamla records were particularly succeptible to cue burn.  And RCA made some special ultra lightweight records that often required piling extra coins on the tonearm just to keep it from bouncing off the record.

Thought I'd take a moment to plug a nostalgia radio site for my old alma mater: KROY, 1240AM in Sacramento. We've put up a salute to the golden age of top-40 that you might find fun. It's primarily geared to Sacramentans of the era but it might kick off some memories of other great stations of the time. Check it out: http://1240kroy.com

We had one of those sitting in the back room in the early '80s. By then it didn't work and someone had removed the playback unit from it, so I never saw it work. Looked like a huge 1-column Audiophile (another piece of worthless crap).

Me, too. 3rd ticket with Element 9 broadcast endorsement. I got that baby
when I was 17 and man, was I proud of it! But I never could figure out what
good the darned thing would have been without Element 9.

For that matter, none of it seemed terribly important. Even then.

 A nice big fat 50-cent piece would have probably worked. Just sit back
and watch that thin plastic thread come oozing out of the groove as the
needle slices right through.... :) :) :)

Is this the new station under construction? Music Mann 279???

I hope they get it on the air soon! Seems like they've been having nothing
but trouble. :D

... it would appear that the array was four towers, and was asymmetrical, with not all four used in either day or night operation.

The existence of 1510 in New London probably had something to do with that old Boston array.

1510 in New London is now dark, and 1510 in Boston (ex-WMEX) recently went to DA-3, with no protection being required to the Canadian Class B during critical hours.

After 13 years on XTRA, Coach John Contera is gettin' Clear Channel's uncerimonious boot! His ratings haven't tanked, and he always got quality guests and callers for his evening stints! So what's Clear Channel's criteria? It's sad that in this era of sports shouters, an even keeled voice is once again being silenced ! Mayhap they're clearing a spot for Fox's J.T. the Brick in SoCal's market! Hopefully, Coach will find a spot on Sactown's Hot Talk 1140 ! What a New Years' gift that would be for NorCali ! Thanks once again, coach, for 13 quality years of pro, college, & hi-school sports coverage! Your void will be vast & unfillable! 73s from all your loyal listeners up-n-down Cali & points beyond !!!

>True, but they could rewind a 1200 ft reel before you could blink!

Yeah, I remember that Acetate tape would start turning into confetti if you let it whip around for a few seconds after it came of the feed reel.  The place I worked was too cheap to by leader tape, so eventually the first cut on the recording would become damaged.  You almost needed to wear gloves to stop the take up reel.  It was dangerous duty.

Chuck

Yep to all of the above (at WNAH in Nashville). I /think/ the commercial
log documentation was more a matter of individual station policy as
opposed to an FCC mandate.

> One more thing....at sign on, one had to call the transmitter and make
> sure the engineer was there to cut it on....

To give you an idea of how long ago this was, our mod monitor picked up
WVOL/1470 before we signed on...with /the/ Oprah Winfrey doing the
5:55 AM newscast.

When I moved to mornings at WSIX-FM (also in Nashville), I had to call
out to the TV site at 4:45 AM to make sure they didn't forget about our
lil' ol' FM station...and fire it up. :-) This, of course, long predated
Gerry House at WSIX-FM. (In fact, when he arrived, he did PM drive at
the then much more important AM facility).

On an earlier post I made a comment that I used to take transmitte readings
every hour, but in my mind I was sure it was every half-hour.
I stated in 1972 so I don't know if it was station policy or the FCC rules,
but I did take readings every half hour.

You may have heard two WorldSpace channels on XM.

But to put it in context, quite a few XM channels are produced "out of house". A number of the hispanic channels are produced by a Hispanic radio outfit in/near Los Angeles. David Edwardo can tell you about them. Some/all of the Urban channels are produced by Radio One. The news channels come from many sources. And there are probably others.

I doubt if you'll find that WorldSpace owns any part of XM at the moment. CC does, and they recently bought the outfit that does those hispanic channels. OTOH, at least a couple of the channels that were produced by CC radio stations have been deleted from XM and replaced by in-house productions. With 100 channels to fill, you'll probably see a number of different arrangements.

Since Sirius carries NPR, are you saying that we should presume that NPR has some ownership in Sirius? I don't think you would.

An orange high pressure sodium light that continually goes on and off all night is at the end of the bulb's life. Not only does the intermittent striking cause RFI, it will eventually ruin the ballast. The power company or municipal authority maintaining the lights is probably unaware that the bulb needs replacing. Try contacting those people.

Dear dial jockeys,

Before tuning in each evening, take a moment to unwind at Thrillpick,
a free website two friends of mine have been putting together in

between their high-cholesterol meals. Parodies and low-tech rants.
Comments welcome. It's at:

thrillpick.0catch.com

I also want to thank you broadcasting enthusiasts for replacing the
vacuum tubes.

Marconily,

Peter Glavodevedhzhe,
100KW

Hi everyone,

If there are any WorldSpace listeners out there who like Yesterday USA, you should know that there is some talk of YUSA being broadcast on WorldSpace, but, your input could be of great help.

For those of you who don't know about Yesterday USA, it is a radio network which broadcasts OTR 24 hours a day. For more information, visit http://www.yesterdayusa.com .

If you would like YUSA to be broadcast on WorldSpace, email njohnston@worldspace.com , and let them know.

Cheers
Henry

Calling Radio Engineers!!!

Has anyone used the Omnia 3 fm?  How does it stack with Orban8200,
2200, and/or 8400?

How does it compare with Omnia brothers FM 6 and 4.5?
Is it all that and a bag of chips???

Wondering.

Can you take that same STL audio, skip the Optimod processing and encode it
to Vorbis OGG so we'd know what DAB would sound like if done right?  96kbit
mono should do the trick. ;-)

For sale:

Partial ownership of fulltime AM radio station in N. Miss. 1 KW. On the air since the 1940s of the last century.

Joint venture, group deal, whatever!!!! LOL!

Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

City of over 14,000 population. One other AM there of lesser power.

No real estate included. Tower lease would be $250.00 per month.

Total asking price of station is $85,000 cash. A steal!

email:  wrecktech@yahoo.com

Tel: (478)741-1710.

The "Radio Crazy" is back at it again!!

73,

Meyer Gottesman, W6GIV
Macon, GA

Reposted without permission, but that's the way of the Internet, isn't it?

Subject: You Know You're An Aging Radio DJ When.....

You were first hired by a GM who actually worked in radio before becoming GM.

You excitedly turn the radio up at the sound of "dead air" on the competitor's station.

Sales guys wore Old Spice to cover the smell of liquor.

You were playing Elvis' number-one hits when he was alive.

Engineers could actually fix things without sending them back to the manufacturer.

You worked for only ONE station, and you could name the guy who owned it.

You remember when normal people listened to AM radio, and only "hippies" listened to FM.

Radio stations used to have enough on-air talent to field a softball team every summer.

You're at least 10 years older than the last two GM's who fired you.

You used to smoke in a radio station and nobody cared.

You know the difference between good reel-to-reel tape and cheap reel-to-reel tape.

Religious radio stations were locally owned, run by an old Protestant minister and his wife, never had more than 20 listeners at any given time, and still made money.

You have a white wax pencil, a razor blade, and a spool of 3M splicing tape in your desk drawer - - just in case.

You know people who actually listened to baseball games on the radio.

You can post a record, run down the hall, go to the bathroom, and be back in 2:50 for the segue.

The new guy you're training has never listened to an AM station.  He couldn't even name one in his own home town if his life depended on it.

You knew exactly where to put the tone on the end of a carted song.

You spent most of the time on Friday nights giving out the high school football scores. And when they weren't phoned-in, you got really pissed off.

You never thought twice about drinking from the same bottle with another DJ.

You only did "make-goods" if the client complained. Otherwise, who cares?

Somebody would say, "You have a face for radio", and it was still funny.

Sixty percent of your wardrobe has a station logo on it.

You always had a screwdriver in the studio so you could take a fouled-up cart apart at a moment's notice.

Agents were people like James Bond and the Man From Uncle.

The only interaction between you and someone else prior to bedtime is, "Thank you. Please pull ahead to the second window."

Your family thinks you're successful, but you know better.

You played practical jokes on the air without fear of lawsuits.

You've been married at least 3 times, or, never married at all.

You answer your home phone with the station call letters.

You used to fight with the news guy over air-time. After all, what was more important: your joke about your ex-wife, or that tornado warning?

You know at least 3 people in sales who take credit for you keeping your job.

You have several old air-check cassettes in a cardboard box in your closet that you wouldn't dream of letting anyone hear anymore, but, you'll never throw them out or tape over them. Never!

You still have dreams of a song running out and not being able to find the control room door.

You run a phone contest and nobody called, so you made up a name and gave the tickets to your cousin.

Hi,

I'm desparately looking for a diagram or a manual for the next
Studer-Digitec audioswitchers:

AS-M 1010 (10x10 mono switching matrix)
AS-M 101  (10 to 1 stereo switching matrix)

Is there someone out there who knows anything more about these? Would
someone be prepared to contact me?
I happen to have this gear, but it's not easy getting it to work without a
manual.
Specifically, the 10x10 switcher is driven with a BCD-encoded protocol.
Impossible to make an interface for this machine without any manual.

thanks a lot,

Soepape

###

I believe that even without permission, you should be kind enough to give the source!  This came from TV game show announcer Randy West, and he posted it this week, December 11, 2002 on Don Barrett's outstanding and unique "Los Angeles Radio People" Web site, www.laradio.com

Don't know if Randy came up with this or he got it somewhere else.

I made a order with them 6months ago and they could not fill my order, so they said I would get a full refund that was 2weeks ago and I still have not got it.  I have sent them nast eamil many times saying I want my refund but that did not work.  Has anybody elese had any problems with transmittersrus if so I want to hear about what happened and what u did about it.  I want to know what I should do about getting my refund.

Hmm...I buy transmitters from Continental, BE, or Harris. Never had a
problem. They have always been able to fill the orders on time, and the
products are solid. If you buy in any quantity, they can be quite
flexible when it comes to prices, as well.

Actually, I don't think Randy is the originator of this material.  Some of
these items were included in a Xerox I have from 1983.
The most recent for was, "You might be a DJ if..."  which originally
appeared on this very newsgroup in 1996, and much of the stuff in "Any Old
DJ's" originated From "you Might Be A DJ If...".  In face, Bill Pfeiffer had
it posted on Airwaves.com for over a year.
In addition, this material was published 3 years ago in the book "PD
Chronicles" by the world-famous mystery PD Jack James (writer of a weekly
column on All Access):
Here is the original version....
===================
You MIGHT be a DJ if...

-80% of your wardrobe has a station logo on it.

-You haven't bought Q-tips in over 3 years.

-You still refer to CD's as "records".....

-You look at your paycheck and say, "That's it! I'm getting a real job!"

-An extra hour and a half of sleep is considered a day off!

-The only interaction between you and someone else at dinner time is,
"Thank you, please pull to the
second window!"

-You call a weekend off a "VACATION."

-You can smoke a cigarette in three minutes or less.

-You answer your home phone with the station call letters.

-A salesperson has ever taken credit for your paycheck.

-You know what a "bullet" is.

-You've ever sliced your finger with a razor blade, and cleaned out the cut with Isopropyl Alcohol
and an extra long cotton swab (only applies to those of us who remember reels and carts)...

-You measure your amount of production in "shitloads"

-You can post the song...run down the hall...do a full blown "number 2" and be back in 2:40 for the segue.

-Dinner?...let's see what the receptionist has left in the fridge.

-You have ever dreamt of a record running out and not being able to find the control room door.

-You've ever muttered the words, "Yea, I'll try to get that on for ya!"

-You have more stereo and computer equipment than everyone else you know...combined.

-People who ride in your car exclaim, "How in the hell do you listen to the radio that loud!'

-You consider wearing a shirt you have to iron, "dressing up".

-When listening to music at your home, you only listen to the first 30 seconds of the song, then you switch to something else.

-Going to a club and not getting paid seems like a useless waste of time.

-Everyone you know calls you to play their wedding or birthday party.

-People you don't even know start calling you when a good band is coming to town.

-Cheerleading coaches call you wondering how to get that "special mix" of the Jock Jam that they heard on the radio.

-You turn the radio up excitedly at the sound of "dead-air" on the competitor's station.

-You have at least three un-opened CD's, two T-shirts, 22 stickers, and 5 cups in your car.

-You have about 500 un-labeled cassettes, (air-checks) in a cardboard box in your closet.

-Cueing, segueing, walking on, loose, back-timing, raise, lower, EAS, and dumb-ass program director are everyday parts of your vocabulary.

-You have at least 19 pictures of you with famous people that you haven't seen since.

-You know the names and artist to every song your boyfriend or girlfriend can think of.

-You know the words to every song they can think of.

-You know the re-mixes to every song they can think of.

-You've slept quite comfortably on the promotion director's easy chair.

-You were a half hour late for an appearance and blamed it on the directions you got from the sales person.

-You've had 5 #8 callers in a row.

-Your favorite past-time is conferencing three un-knowing listener's on the same line.

"What is iBiquity Digital? (Seems to a breakthough according to this extract from the website, but I see some disagree which is often the case with new developments - Mike)

In one of the most revolutionary moves since Frank Conrad founded radio broadcasting in a small red-brick garage behind his home in Pittsburgh, Pa., in 1919, iBiquity Digital Corporation (iBiquity Digital) has created the technology that will allow radio broadcasting to enter the 21st century.

With bare wires, crackling spark coils and homemade vacuum tubes, Conrad pioneered an industry that has become the world's primary source of news and entertainment. But much of the sound of radio has remained the same during the years since its invention. iBiquity Digital is taking AM and FM Radio to the next level.

Our breakthrough technology allows digital radio signals to ride the same airwaves as analog AM/FM radio, bringing CD-like sound from any radio station to the listening public and integrating wireless data that will put news and entertainment at your fingertips.

Actually, the call letters for 98.9 and 99.1 are: KEMR and KZMR. Both with spanish formats. KSOL, has moved to 105.7 after buying KARA from empire broadcasting. KSOL is also spanish.

Excellent processor, with the ability to run rings around the Orban boxes!
There is one on the air in our local market.

Bill Kelly

There are none on the air in our market because our collective opinion differs substantially.

> Has anyone used the Omnia 3 fm?  How does it stack with Orban8200,
> 2200, and/or 8400?

I'm not sure specifically what model(s) they use, but Emmis uses Omnia processors on their New York City stations, and these are some of the most distorted, grundgy, and overprocessed FM stations I have ever heard.  In the past year, they even cranked up the processing on their "Smooth Jazz" station to the point that a simple piano-bass-drums jazz tune can't get through their audio chain without producing a blatantly obvious amount of distortion -- even on the 3-inch speaker of a typical table radio.

Of course, when carefully tuned in respect to its limitations, almost any processor can be made to provide a good balance between loudness, fidelity, and quality.  However, the latest digital processors from Orban and Omnia are rarely used in this manner, at least by commercial stations with mainstream music formats.  Instead, these stations purposely take advantage of "brute force" digital clipping that these processors use to achieve absolute maximum LOUDNESS, at the expense of creating this kind of distorted, "grundgy" sound.

So, while Omnia claims their product sounds better than Orban's, and Orban claims their product sounds better than Omnia's, BOTH can be made to sound like RUBBISH if they are used in an inappropriate manner.  Hopefully, as more people begin to realize just how BAD the processing on today's radio stations sounds, the "Loudness Wars" might back down to a more reasonable level... but until then, whatever audio processor you use, please use it responsibly!

I will comment that KEOS at least has an engineer who can actually fix things without sending them back to the manufacturer.

Heck, he rebuilt the transmitter from junk status.

Okay, I'm happy we have Lance. :)

Not ever.

It didn't require a license to be on the air. It required a license to control the transmitter. Since by 1955 or so, so many stations ran their transmitters by remote control from the studio control room (with the announcer taking the readings), that you are right in the sense that at most operations, particularly small or medium-sized stations, it required a license to get a _job_ on the air if, as part of the job, you ran the transmitter.

I go back to the days when transmitter remote control was unheard of, when only the very smallest stations broadcast from a transmitter site, and when except at the small stations, announcers never touched any equipment. Yes, there really were days like those. And it was also almost unheard of for an air person to use headsets except in quite special circumstances. Can't imagine it right? It happened.

Don

Hi!

New javaradio in beta test at:

http://www.javaradiofrance.com

Coverage: 100 kHz to 1300 MHz with all mode.
Situation: based at Orly (just near Paris)
Online: 24/24

Free access, just give a nickname and your location to connect on server.
Troubleshooting? Send a message to jean-marc.cera@wanadoo.fr

Thx!

Sorry I didn't clarify myself on the requirement to have a license-:) When I got into radio.....you would not get hired without at least that 3rd ticket. Hows that?

How does Omnia 3's wideband AGC stack with Optimod 2200's 2 band AGC?  One
would assume that having constant level control on two bands will outperform

(loudness) a unit with a wideband AGC.

Though many say the Omnia 3fm is a LOUD box, is the Oraban 2200 even LOUDER because of the two band agc's???

Budget will only permit these types of products...

Thanks

Me, me, me!!

>who can tell me what a "cue scratch" is?

The scratchy sound on a vinyl record made by spinning it backwards to cue it up.

> What did Gates make?

Transmitters and control boards, plus sold all manner of other audio
gear, some outsourced, under its brand name.

>How about
>Sparta?

Likewise, except it was all cheap junk.

>Why would you find a board with nails sticking out of it in the
>newsroom?

To hang wire copy taken off the teletype machine after it was sorted
into categories.

> What was "Pulse?"

A ratings service.

>God, we're old! ;-)

No s**t, Sherlock.  Any further questions?

We are old indeed.

A "cue scratch" resulted from running the record on the turntable platter to the start of the music, then backing it off a quarter turn or so allowing a fast start when you played the record going by either turning on the turntable motor or releasing your hand from the top of the disc with the turntable spinning underneath. The "backing up" of the needle many times eventually caused a scratch.

When I started, in 1953, our new main console was a Gates and so was the transmitter, carts wern't invented yet so we didn't have any Sparta cart machines nor cheap Sparta consoles. Gates, RCA and Collins were the most common consoles back then. Our tape recorders were Magnecorder Model PT-6's as I recall. All the mikes were RCA-44BX's in the studios (with one cool Western Electric combination ribbon and cardioid--a cool mike, used mosty by Mutual, WOR, and the VOA), with Western Electric and Altec "salt shakers" used for remotes. At that time, there were no solid-state devices of any kind used in broadcasting--nothing but tubes.

This is fun stuff.

I'll jump back in, but only because the questions were posed by yet another "Dave Williams":

Don't know the first;

>From spinning the record back and forth on the turntable, by hand, to find the first part of the audio, and then to back up "just a tad more";

Boards, noteably "The Yard" and lots of other goodies;

Boards, know little about them;

Hang teletype copy paper and tape;

Don't know the last.

How many "Dave Williams" does it take to run a 250 Watt AM station?

B^)

You know, I just recently pulled an old Collins console out of service that dated back to the early 60s! It still works but it's time to move on. Anyone remember 6V6's or 12AX7's? It was an odd contrast to have a computer connected to this board!

I hope a "cue scratch" isn't the result of inviting a baseball player to a game of pool.

> > *  To be on the air use to require a license! LOL....Not anymore!

You didn't need it to be on the air, just to operate the transmitter.
The reliability of older transmitters was in question, so they required a license to operate.
In addition, if you worked at an FM with more than 50kw or an AM with a directional array, you needed a first-class license.
Such was the case with me.  I wound up going to a school in Tampa that taught you the answers to the FCC exam and I got a first ticket.
I new absolutely nothing about how the transmitters worked, let alone the phasing equipment yet I had an engineer's license.

>newsroom? What was "Pulse?"

I know what all of these are except the nails on the board in the newsroom (to hang headphones?)
What's the answer??

Let me preface this by saying I don't work in radio at all.  But...

Didn't Gates make transmitters or was it reel-to-reel tape decks?

And the board with the nails in the newsroom was to put the copy from the news wire on while it waits to be put into a newscast or just read on the air.  When I worked a couple semesters at my college's station (as a diversion from my Education courses), we had a nail for National, State and Local News and nails for Sports, Weather and Entertainment.

There was a really good radio station i used to listen to in San
Francisco which
called itself "The City".  Would appreciate it if some one would pass
along the call letters.. Trying to find it on the web.
Thanks

Hi Everyone,
I'm selling a few bits and pieces on ebay....
Soundscape, Midiman midi patch bay and UHF power divider. (High power LC type).

Power divider...
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=296&item=1941843233&rd=1

Midiman...
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=23792&item=925728439&rd=1

Sounscape...
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=15199&item=925985493&rd=1

Based in Ireland. Will post anywhere.

Thanks for taking the time to read!

Tony

Hi Mary

go through the ad agencies and see if they have that commercial and credits
on
a webpage
Here is a  webpage that is similar to the pricey agency redbook 'cept it's
free
http://www.agencycompile.com/directory/results.asp?type=client&operation=and
&criteria=McDonalds&Submit.x=28&Submit.y=3

How long ago did Mcdonands drop the sign that said "Over 50 billion sold "?
Boggles my mind ---that's a whole fifty pounds of meat.

Part ownership of fulltime AM radio station in Idaho for sale.

The "Radio Crazy" is back!

$85,000 full asking price. No real estate. Station on air since the 60s of the last century!

Application on file with FCC to incrase to 50 KW days, nondirectional with 16 watts nights. Also non-DA.

This would become the 2nd most powerful daytime AM signal in Idaho!

Presently 1 KW fulltime on class IV (Now called class "C" by the Friendly Charg-U Corporation!)

Active/inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights, if desired. All funds would be held in escrow by an FCC attorney. I am not buying a one way ticket to Brazil!! LOL!

Call (478)741-1710 or email:  wrecktech@yahoo.com for more information.

73,

Meyer Gottesman, W6GIV
Macon, GA

aka "The Radio Crazy"

I don't care, but no-code makes it easy to have a 100% ham crew as a PR move.

If you need code, each would have spent some time preparing for the exam, which indicates an actual personal interest; more time than a PR department would be willing to spend.  It would be a ``waste'' beyond reason.

My own opinion is that the code is quite musical, sent right, as a matter of aesthetics. Nobody at all will know that in a couple generations. But there's no point in insisting on a tradition that nobody's choosing.

KLAC 570, a CCC station, is abandoning talk format which evidently failed to pay the bills and returning to 'nostalgia.' So, there go: Bloomberg on the Money, Gil Gross, Michael Jackson, Bill Cramer, Suze Orman, Dr. Edell, etc. We are to hear a lot of Sinatra. Hmmm. .. wonder if they will restore their AM stereo?

It was KKCY.  No longer exists, however, so a web search is useless.

That was a beautiful jingle used by a number of stations, including KVI Seattle
and KOB Albuquerque somewhere about 1960-64.  KVI even gave out 45rpm records
of the jingle to their faithful listeners.

>>
Application on file with FCC to incrase to 50 KW days,
nondirectional with 16 watts nights. Also non-DA.
>>

Exchanging a 1,000 watt full-time operation on 1400 for a 50,000 watt (day), 16 watts (night) operation on 1420 seems a little strange, at first.

However, a brief examination of the use of 1420 in that region would seem to make the following moves make sense:

1) 50,000 watts, days, to establish a daytime prority, thereby blocking any similar move by the dominant station in that same region, KUJ in Walla Walla, WA, and

2) getting as much power nights as is possible with two or three towers, hopefully enough to block out the interference which will be received from the new 10,000 watt (day and night) station which is allocated to Calgary (and also any interference which may be received from KUJ's 5,000 watt night operation).

>From http://www.carolinesouth.com

What Is Worldspace? Quite simply it is one of the most exciting developments in radio technology in recent times! It is a portable radio with the normal FM, Medium Wave and Short Wave bands PLUS a satellite band which enables you to listen to digital quality international radio stations AND specialist music channels throughout Europe, Africa and Asia.

How easy is it to receive the satellite channels? It is very simple. In addition to the usual telescopic aerial for FM and Short Wave reception, and the internal medium wave aerial, there is a convenient flap antennae for the satellite reception. Just flip it up and point it at the satellite and up comes a large selection of radio channels.

The receiver must be able to 'see' the satellite. In Europe this means pointing the receiver towards the South. It is very uncritical, which means that you do not need to be an expert to set it up, and the signal stays even if you turn the receiver through a wide angle and tilt it. This makes it ideal for maritime use. The receiver also works through a glass window, and if you want to take the receiver further inside, it is very easy to detach the satellite 'flap' antennae and attach it to the receiver with a 5m extension lead which comes as a standard accessory with the Hitachi receiver pictured here. It is a robust and high quality receiver produced by one of the world's leading electronics manufacturers.

There is a digital readout and memory buttons so that you can easily choose your favourite radio stations whether they are on the Worldspace band or the conventional FM, Medium Wave or Short Wave bands. It works off batteries or mains electricity and is completely portable. There is a headphone output and a line output so that you can listen to Worldspace through a Hi-Fi system as a tuner. Most of the music channels broadcast in digital stereo.

Where can I hear the Worldspace Programmes? The Worldspace receiver works around the world with it's conventional FM, Medium Wave and Short Wave bands, just like any other quality radio receiver. The Worldspace bands will pick up a wide variety of international radio stations and specialist music channels throughout Europe, Africa, Asia and shortly Central and South America with the launch of the Ameristar satellite.

Radio Caroline is among a spectrum of prestige broadcasters listed below that can all be heard on the three beams of Worldspace's Afristar satellite which gives good digital quality reception throughout Europe, Africa, the Middle East and West Asia (see coverage map on the left.)

Many of the stations can also be heard on Worldspace's Asiastar satellite. For more details on this service and the Worldspace system visit the Worldspace Web-site.

The extensive international reach of the Worldspace system makes it ideal for frequent travellers, expatriate communities, members of the armed forces, yacht owners and crews and anyone who wants to own a state of the art radio which receives all of your favourite local stations and a wide selection of channels exclusive to Worldspace.

News, sports, finance and specialist music channels including pop, rock, dance, classical, opera, country, Jazz, R&B, African, Latin American, Golden oldies and much more. Check out the list of channels available on Worldspace's Afristar satellite below.

What radio channels can I hear on the Worldspace band?

Radio Caroline*  The legendary pirate radio station continues with it's unique mix of quality album music old and new. The musical antidote to the repetitive play-lists of latter day local commercial radio!

BBC World Service** The world leader in international news, information and entertainment.

National Public Radio (NPR) * a leading provider of news and entertainment radio programming in the United States.

CNN-I The radio version of the US's pioneering TV news channel, CNN.

Bloomberg  The radio version of this leading financial news provider.

World Radio Network (WRN)  25 of the world's leading public broadcasters including English language programmes from Australia, Belgium Canada, China, Denmark, Holland, Hungary, Ireland, New Zealand, Poland, Russia, Sweden, USA, Wales and the Vatican.

Radio Voyager  Hot American Contemporary Hit Radio

Exclusive Worldspace Non Stop Music Channels - Orbit Classic Rock - Maestro Great Classical Music - Riff Cool Jazz - The Hop Golden Oldies - Bob Alternative Rock - 24x7 Dance & techno - Potion The best R&B and soul - Up Country All Country music - Ultrapop The hottest chart hits - Ngoma  Hot African music - Oyeme - Tropical Latin rhythms

International Pop Channels - Radio 1 (Lebanon), Capital (Ankara), HitMix FM (German/English)

The Weather Channel - Rolling weather bulletins for Europe, including regular shipping forecasts

French Language Channels - Europe 1, WRN-Fr, Canal EF, RFI, Bloomberg French

Italian - Radio Dimensione Suono, Italy's leading national adult contemporary radio network

Spanish - REE  External service of Spain's national radio

Switzerland - Swiss Public Service International broadcaster RSI/RTS

Arabic Channels - Medi (Casablanca), Haneen, Killamus.

African Channels - Kaya (Johannesburg) , Congo BZV, KBC (Kenya), Walf (Senegal), Yoon WI

Indian Languages - Metro East FM, based in Nairobi broadcasting to Africa's Asian population. Radio Asia - Paris based Tamil station serving Africa.

* Radio Caroline and National Public Radio are optional extras available with a modest annual subscription fee. See below for a special all inclusive offer with the purchase of a new Worldspace receiver.

** African stream of BBC World Service. Some local African news replaces local European news programmes.

>>

KKCY/98.9 is now part of the dual-channel operation of K-SOL.

The "other half", 99.1, was originally KSCO-FM (Santa Cruz), later KLRS-FM (also Santa Cruz, under Fuller-Jerrfey, IIRC), and then "Double 99", as a rocker (can't remember the calls), before KSOL moved from 107-something to 98.9/99.1.

Current calls are: KSOL, San Francisco and KZOL, Santa Cruz.

KSOL is 6 kW, omni, with a 400 meter high antenna, but KZOL is 1 kW, directional, with an 800 meter high antenna (on Loma Prieta, the dominate peak, and an extinct volcano, high in the Santa Cruz Mountains).

KLAC 570, a CCC station, is abandoning talk format which evidently failed to pay the bills and returning to 'nostalgia.'  So, there go: Bloomberg on the Money, Gil Gross, Michael Jackson, Bill Cramer, Suze Orman, Dr. Edell, etc.  We are to hear a lot of Sinatra.  Hmmm. .. wonder if they will restore their AM stereo?

Digital broadcasting is going to be a triple-nightmare.

1) It will obsolete virtually every radio in current service (millions of them in cars)
2) Anyone with even a basic understanding of Engineering will tell
    you that digital wireless signaling is inherently rich in harmonics and is a
    "real bitch" to reduce transmitted RFI and shield from the same.
3) Digital broadcasting requires much higher RF Power to ensure receivers
    "hear" the signal - one missed byte and it goes dead.

Digital Radio (and it's cousin HDTV) is the MOST FLAWED broadcast plan to come down the road. Consumers will reject it. It's more expensive. In some cases you will need to pay a *monthly fee* to receive the broadcast. It will destroy the whole fabric of AM and FM radio for the majority of consumers.

In short - IT STINKS.  The worst idea since "New Coke" and the Yugo Car.

For the Worldspace web page  http://www.worldspace.com/

Be aware that their South American coverage is in "someday" status. Probably
a long time coming.

I've never quite understood why Worldspace is headquartered here in
Washington, DC, USA, since they don't broadcast to this part of the world.

There was some initial connection between them and XM Satellite Radio, which
covers the USA, but that disolved long ago. XM is also in Washington, DC.,
as is National Public Radio, and of course the VOA.  These four
organizations employ a number of air personnel who used to be on our local
stations.

No, you use smooth basis functions. The meanings are digital but the digital medium is nicely engineered analog.

The meanings finally convert back to digital, and then decoded again, in the receiver.

In principle, you'd be transmitting digital if your scheme were just to have J Vernon McGee reading one's and zero's in voice, and your receiver used voice recognition software to decode it into binary for a d-to-a converter. The bandwidth would be a little low, is all.

Compatibility would not be a problem that way either, and you wouldn't need the sideband tripling.

Jean Shepherd used to send Morse code on a kazoo, which is also digital, WOR's first digital experiment in fact, a mode not in the FCC list.

Of course - but it seemed a little odd that such an outfit would be here. After I sent my message I looked at their Board of Directors listing.  Now I understand the DC location.  Most of the Board are DC-area people, except for the honcho of the Nobel family interests.  You've heard of the Nobels - the prize and all. They probably have a lot of money in WorldSpace.

Most of the rest of the Board members don't sound like people with a lot of money One - my ex-Congressman / Senator - was never in politics for the money.

Yes but its still a good question, why are they incorporated in the USA?

I quote from http://www.worldspace.com/about/history.html
WorldSpace Corporation was founded in 1990 by Noah A. Samara, Chairman and CEO, with a vision to provide digital satellite audio, data, and multimedia services primarily to the emerging markets of Africa and Asia. To implement this vision, WorldSpace conceived of and built the first ever satellite radio infrastructure in the world. In the past 12 years the company has built three satellites and launched two to provide audio, data, and multimedia broadcasting coverage to Africa, Asia, The Middle East and Western Europe."

No mention of the USA there...

Mike

In article <asqjjh$6qo$1@xuxa.iecc.com>, "David Eduardo"
<amdavid@pacbell.net> responded to this statement:

> > Digital broadcasting is going to be a triple-nightmare.
> >
> > 1) It will obsolete virtually every radio in current service (millions
> > of
> > them in cars)
>
> No it won't. Stations will have analog and digital on same frequency.
>

Only until the analog side is sunset, at a time to be determined in the
future, IIRC. Eventually stations are supposed to go "all digital...."

Then again, I read an article in Current that talked about stations
maintaining the analog/digital hybrid mode in perpetuity (at least on
the FM side, don't know about AM).

If *that* is true, then we're not getting "digital radio," are we? We're
getting an analog signal with two digital sidebands saddlebaged onto the
carrier.

Smells like a way to break into wireless ISP service, or a way to crack
the "pay per view/listen/download" market. DTV stations are already
doing this, and two technologies are being rolled out:

WebHopper (a Clear Channel idea) offers 256kbps download speeds to
residential customers and 768kbps download speeds to business folks.
Theirs is more like a one-way DSL or cable modem.

iBlast, (a product funded by a large consortium of media companies who
hold 260+ stations between them) can allegedly serve up 75GB a day per
station.

Wonder how well the technology will port to IBOC - ahem - "HD Radio."

This is what they mean when they talk about "convergence" - it has
nothing to do with being a broadcaster, this is for sure.

Bummer!  Does that mean my favorite little radio, the Sony SRF A100, gonna be obsolete?  Alas, I thought I was a trailblazer, acquiring it in the heady salad days of AM Stereo.  It even has an A/B switch just in case the world decided to go Kahn/Hazelitne! :)

I guess it'll land on the same scrap heap as my WW2 era Farnsworth with the 42 Mc. FM band!

(sniff, sniff, boo hoo!)

Anyone familiar with a station in the last few years that used the name
"The Wire" out of Dothan, Alabama?  I'd appreciate any info - Call Sign,
Freq, etc.

Thanks,  Dave

>No it won't. Stations will have analog and digital on same frequency.

If you were right, I wouldn't object to HD radio, but the digital part of the signal extends into the adjacent channnels.  There is nothing "In Band On Channel" about it.

I have no objection to the concept of digital radio.  I just think this is the wrong way to go about it.

And surely the transmitters in their satellites can't be licensed in the USA, can they??

I wouldn't be too surprised if "three letters" had something to do with WorldSpace.  The three-letter group might start with C or D or N or V or ....

WorldSpace will rent you a private digital data channel. Data receivers on commercial computer I/O boards for a PC are available.

http://www.worldspace.com/productsservices/directmedia/hardware.html

I have absolutely ZERO inside information to cause this suspicion.

There is no timetable or noce of intention to make stations go all digital.

Analog is 24/7 on AM and FM. Digital is 24/7 on FM, and daytime only on AM
at present.
>
> Then again, I read an article in Current that talked about stations

There is no regulation. IBOC is optional, and probably always will be since
it requires the station to pay a fee.
>
> If *that* is true, then we're not getting "digital radio," are we? We're

> carrier.

No, we are getting separate digital and analog signals on the same
frequency. Each is created by a separate transmitter or exciter and
combined.
>
>
> Wonder how well the technology will port to IBOC - ahem - "HD Radio."

Not enough bandwidth to do that and program at the same time, especially on
AM.

No, that was tone modulation.  This is kazoo.  Suppress the carrier and you have
spark.

Did anyone say that the tone had to be pure sinewave???

There is no relationship between the ownership of XM and Worldspace; due to some unseemly events at Worldspace, XM bought out their shares well before the official launch of the service.

Hey!

I thought you'd like to hear a recording of a performance we gave of "The Whithering of Willoughby and the Professor: Their Ways in the Worlds." It was broadcast during the WKNH Radio Theatre's "Sounds of the Season", a live radio show, which aired on Sunday December 1, 2002 from 6-8PM, before a studio audience at the Night Owl Cafe in Keene, New Hampshire.

As you listen, keep in mind that my talented husband, Joe Bevilacqua did all the voices ***live*** on the air in front of an audience. Pretty darn amazing! (Well, he has been doing variations of these characters since he was 12 years old.)

I did all the sound effects, including the sound of the camel's bleat. The Professor's echo is courtesy of a coffee can placed in front of Joe's face. The script was co-written by Joe with Robert Cirasa. The theme music was written by David Garland. The live broadcast was produced by Janine Preston (aka "Ginger").

Our "Willoughby" segment runs 11 minutes.

You can hear the performance (and even see a few photos of it!) by going to
our homepage:

http://www.comedyorama.com

and clicking on the LISTEN NOW icon.

Happy Holidays!

Lorie Kellogg

>only needed two AM radios, each tuned slightly off.  If an upgrade that
>relies on equipment you already own can't work ...

Motorola had more money and more political clout. It was the "best government money can buy" thing. I ran Kahn for several years at XTRA, San Diego. It was wonderful.

Rich

Amateur Radio Newsline=E2=84=A2 Report 1321 =E2=80=93 December 6, 2002

Amateur Radio Newsline report number 1321 with a release date of Friday,
December 6, 2002 to follow in 5-4-3-2-1.  =20
=20
The following is a Q-S-T.  North Korea takes its only ham off the air and=
 the
first digital voice Q-S-O across the Atlantic.  These stories are first o=
n
Amateur Radio Newsline report number 1321 coming your way right now. =20

(Billboard Cart Here)=20
=20
**

INTERNATIONAL =E2=80=93 N. KOREA:  LAST HAM FORCED OFF THE AIR=20

The Peoples Republic of Korea appears to no longer want Amateur Radio ope=
rating
from its soil.  It made its intention clear when it asked its only ham it=
o pack
his gear and send it out of the country.  Jeramy Boot, G4NJH, in Nottingh=
am
England has the details:

--
Ed, P5/4L4FN, the only radio amateur operating legally from North Korea, =
has
had to close down. On the evening of the 22nd of November, Ed was called =
into a
meeting with the North Korean Radio Regulation Board. Without any explana=
tion
he was politely asked to stop all transmissions and to pack up all his ra=
dio
equipment.=20

Ed spent the following day dissembling his antennas and packing boxes. Th=
at
afternoon government officials sealed all the boxes and Ed has been told =
to
take everything out of the country when he leaves North Korea for a two-w=
eek
holiday on the 10th of December.=20
```

Jeramy Boot, G4NJH
--

With Ed now off the air, ham radio is gone from North Korea and nobody ex=
pects
it to be resumed anytime in the near future.  It also puts North Korea ba=
ck
near the top of D-X=E2=80=99ings most wanted list. =20
More on this story is at www.amsatnet.com/p5.html. (RSGB)

**

EMERGING TECHNOLOGY:  DIGITAL HAM AUDIO SPANS THE ATLANTIC

Two ham radio communications pioneers have achieved a major breakthrough.=
  The
first two-way digital voice transmission across the Atlantic via Amateur =
Radio.
 Norm Seeley, KI7UP tells us who did it and how it was accomplished.

--
Doug Smith, KF6DX, and Didier Chulot, F5MJN, have successfully transmitte=
d and
received HF digital speech signals between  Sevierville, Tennessee  and P=
aris,
France.  It happened on Friday, November 22 nd. =20

The first historic contact took place on 21.218 MHz in the 15 meter band.
Chulot spoke with Smith for several minutes using a high-frequency digita=
l link
within a 3-kHz bandwidth. Signal strengths were S-5 to S-7 and readabilit=
y was
solid in both directions.=20

The feat was accomplished using Ten-Tec transceivers and digital audio sy=
stems
from Thales Communications. =20

--
DEMO AUDIO HERE
--

The Q-S-O demonstrated the advantages of digital audio for two way radio.=
  This
includes noise-free, FM-like reception and the potential for simultaneous=
 voice
and data exchange.

With an eye toward the digital future of Amateur Radio, I'm Norm Seeley, =
KI7UP.
--
    =20

The Ten-Tec/Thales system used in this experiment is based on a new
international broadcasting standard for digital radio adopted last year b=
y the
International Telecommunications Union.   The FCC has approved a similar
standard for broadcasting in the United States.  An Amateur Radio version=
 is
expected to appear on the market sometime in 2003.  (KF6DX, Ten-Tec)

**

EMERGING TECHNOLOGY:  PPW PROPOSES ELECTRONIC INFRASTRUCTURE TO WARN PUBL=
IC OF
DANGER

A group of U.S. communications security experts has recommended  that Ame=
ricans
be alerted to impending danger over their wireless devices.  Amateur Radi=
o
Newsline's Fred Vobbe, W-8-H-D-U, takes a look at this new concept in eme=
rgency
notification:

--
The Partnership for Public Warning says that a national wireless system c=
ould
send alerts to citizens via their pagers, mobile phones or computer scree=
ns. =20

The Partnership for Public Warning is a newly formed thirty-member adviso=
ry
body that includes representatives of government agencies, relief agencie=
s and
even a ham radio operator.  And on Monday, November 25th it released a re=
port
that says conventional media broadcasts may spread alerts too slowly in
instances of pending natural disaster or terrorist threat. =20

P-P-W says that the newly formed Department for Homeland Security should =
take
responsibility for leading development of a national all-hazard public wa=
rning
architecture.  This, in partnership with other federal agencies, state an=
d
local governments, industry, universities and other stakeholders.  The
technology itself would be produced by private industry with the alert sy=
stem
operated by governments and selected other organizations following a stri=
ct set
of alert protocols.=20

P-P-W says that improved warning systems and procedures  will reduce loss=
es
from natural and man-made disasters, and will speed recovery.  Most impor=

tant
is that it will save lives.

For the Amateur Radio Newsline, I'm Fred Vobbe, W8HDU

--

President Bush cited quick responses to attacks as a priority of the new
Department of Homeland Security which will consolidate parts of 22 depart=
ments
to better prevent attacks in the wake of the September 11, 2001 terrorist
attacks in which some 3,000 people died. =20

information about the Partnership For Public Warning is on the web at
http://www.partnershipforpublicwarning.org/ppw  (Published reports)

HAM RADIO GROWTH:  GOOD NUMBERS TO US

The folks on that "other band" might call this =E2=80=9Calmost good numbe=
rs.=E2=80=9D  This
with word that the number of radio amateurs licensed by the Federal
Communications Commission is at a five-year high.  But there are some cav=
eats.=20
Bill Pasternak, WA6ITF, has more:

--
According to the CQ Magazine website, FCC numbersshow a total United Stat=
es ham
population of 684,498 as of October 31st.  And breakdowns provided by Joe
Speroni, A-H-Zero-A, say that the primary growth has come among Amateur E=
xtra
Classand General Class licensees.  Extra is now breaking the 100,000 poin=
t for
the first time.

Technician Class figures have essentially held steady.  Also we had 20,00=
0 new
hams entering the hobby in the year ending October 31st.=20

License renewal statistics were also encouraging with the renewal rate cl=
imbing
from an abysmal 45% two years ago to a better, but still unacceptable, ra=
te of
55% in the past year.=20

Better numbers, but not the best.

For the Amateur Radio Newsline, Bill Pasternak, WA6ITF, in Los Angeles. =20
--

More on licensing figures are on the web at www.speroni.com/fcc (CQ)

**

## HAM RADIO IN THE PUBLIC EYE: THE ATLANTC MONTHLY

The November 26th edition of Atlantic Monthly Magazine On-Line has some g=
ood
words about ham radio and its role in homeland security. In an article t=
itled
America's Secret Weapon in the War on Terror, one of the groups singled o=
ut for
attention is the nations corps of Amateur Radio operators. Its described=
in
the article as an ever-ready line of emergency communications.

The story goes on to say that America boasts 650,000 licensed ham-radio
operators. It quotes he ARRL's Mary Hobart as saying that about 1,500 of =
them
are fully certified in emergency communications and are prepared to rush=
to
the scene of a forest fire, flood, or hurricane with a jump bag full of
portable radio equipment. And says Hobart, That can be crucial.=20

Atlantic Monthly notes that when phone lines, radio towers, and even =
=20
satellites go down, ham operators -- broadcasting each to eac=
h
other , and operating on batteries or generator -- stay on the air. And =
says
Atlantic Monthly, after the terrorist attacks of 911 when New York's cell
phones turned into paperweights hundreds of hams, some from as far away a=
s
Texas and California, turned out to provide radio lifelines for emergency
workers and relief agencies.

The article is must reading for everyone involved in Amateur Radio public
relations. It can be found at the U-R-L listed in this weeks Amateur Rad=
io
Newsline print edition.

The complete article is at

http://www.theatlantic.com/politics/nj/rauch2002-11-26.htm  (KS2G)

**

## ENFORCEMENT:  FCC INVESTIGATING INTERFERENCE TO EMERGENCY TRAFFIC IN LOS ANGELES

The FCC is looking into allegations that two Los angeles area hams interf=
ered
with a distress call on an area repeater.  The FCC's Daryl Duckworth, NN0=
W
explains:

--
"The Enforcement Bureau has opened a case involving allegations of delibe=
rate
interference to emergency communications on the N6SAP repeater in the Los
Angeles area.  Anton W. Johnson, N6OAY, and Ledge Musselman, KC6NCN, are =
being
asked to explain the allegations of the operations on October 2.

Information is also being sought from the repeater licensee. Scott Press.=
=20

This mater is being taken very seriously by the Enforcement Bureau since
emergency communications is one of the foundations of Amateur Radio."
--

The FCC claims that Johnson and Musselman interfered with attempts to rel=
ay
emergency traffic on the 147.435 repeater at about 9:45 a.m. on October 2=
nd.=20
Press is being asked to explain what action he is taking in this matter. =
He is
also been directed to summarize any conversations he may have had with th=
e
licensees against whom the allegations have been made.  The FCC says that=
Press
must also provide any written correspondence he may have sent to Johnson =
and
Musselman.  All three were given twenty days from he date of the FCC lett=
ers to
respond.

**

## ENFORCEMENT: THE STORY OF THE EX-AA8DP

A follow-up now to last weeks report of the capture of Steve Anderson, th=
e ex
AA8DP.  Anderson was wanted in connrection with an alleged attack on a po=
lice
officer.  He  was arrested in the hills of North Carolina following a man=

hunt
that has lasted over a year.  Amateur Radio Newsline's Henry Feinberg, K2=
SSQ,
has the story of how Anderson was caught:

--

A tip to the Fox Television program "America's Most Wanted" and forwarded=
 to
federal investigators has led to the arrest of Kentucky fugitive Steve
Anderson, the ex-AA8DP.  Anderson, an alleged white supremacist who resig=
ned
his Amateur Radio license almost two years ago and then operated an unlic=
ensed
radio station from his home, had been at large since October 14th of 2001=
. =20

According to the Louisville Courier-Journal, Anderson was arrested in the
mountains of southwestern North Carolina by the Bureau of Alcohol, Tobacc=
o and
Firearms and the North Carolina State Bureau of Investigation.  The A-T-F=
's Don
York told the newspaper that     America's Most Wanted received a tip abo=
ut
Anderson's whereabouts after airing its second segment on him about a mon=
th
ago. The tip was forwarded to the A-T-F, which worked the case with North
Carolina authorities.

Anderson is accused of shooting an automatic weapon at Deputy  Scott Elde=
r.=20
This, after Elder had pulled Anderson's truck over north of Middlesboro
Kentucky for a traffic violation. Elder was unharmed after Anderson alleg=
edly
opened fire, but  his police cruiser was struck about two dozen times.  P=
olice
said Anderson then drove into the mountains, and a search of his property
turned up explosives and guns.=20

Anderson had attracted attention of authorities several years ago by play=
ing
host to a small Ku Klux Klan rally during which a cross was burned.  He a=
lso
allegedly operated a shortwave radio station out of his home, where his
commentary against minorities, immigrants and the government drew the att=
ention
of the Federal Communications Commission.  The Anti-Defamation League
complained to the FCC about Anderson's broadcasts which were taking place=
 in
the Amateur bands. Rather than explain his actions, Anderson sent in his =
AA8DP
license for cancellation.  It was accompanied by a rather convoluted mess=
age

that said he did not recognize the licensing authority of the FCC which h=
e
called an agent of a foreign power. =20

Anderson continued to broadcast but bowing to extensive pressure from the
nations ham radio community, he took the transmissions out of the Amateur
service bands.  They stopped after he disappeared following the alleged a=
ttack
on Officer Elder.

For the Amateur Radio Newsline, In Henry Feinberg, K2SSQ.
--

As previously reported, the ex-AA8DP had been a member of the Kentucky S=
tate
Militia until April 2001.  That  group dismissed Anderson because he refu=
sed to
shut down his unlicensed radio operation.  (ARNewsline(tm) from published
reports)

**

## THE INTERNET VS. HAM RADIO:  HOTMAIL AND JUNO BLOCK ARRL E-MAIL FORWARDIN=
G

If you get your e-mail using the American Radio Relay League's @arrl.net =
vanity
address, and use Juno or Hotmail as your account you know that you were c=
ut off
for a few days.  It wasn=E2=80=99t the ARRL=E2=80=99s doing.  Blame it on=
 the twi internet
service providers.

According to an ARRL bulletin the two companies notified the League on No=
vember
25th that they had stopped accepting e-mail messages forwarded to users o=
f
their services from the arrl.net e-mail server.  According to representat=
ives
of the two companies, this was part of heir solution to the Internet-wide
problem of spam. =20

The ARRL, through the vendor for the arrl.net server began  working with=
 both
companies to resolve this matter.  The ARRL and Hotmail reached a accord =
the
fllowing day and service was restored.  Juno was back late on Monday Dece=
mber
2nd.  During the peak of the service outage, forwarded e-mail to nearly 6=
,000
ARRL members  was curtailed.  (ARRL)

**

## RADIO LAW:  NEW CODES DEVELOPED TO HELP STUDY RADIO RELATED HIGHWAY ACCID=
ENTS

State highway departments will soon get help tracking how many traffic
accidents are caused by drivers chatting on their handheld cell phones or=
 C-B
sets, using their pagers or checking their personal digital assistants.  =
In
January, every state will receive a booklet of revised codes that describ=
es
causes of vehicle crashes, including distractions from electronic communi=
cation
devices. The codes were developed by traffic safety and crash data expert=
s,
including the Governors Highway Safety Association and the Federal Highwa=
y
Administration.  =20

A spokesperson for the Governors Highway Safety Association, says that th=
e
updated crash codes will allow the organization to develop data that
demonstrates whether electronic distractions in cars are a serious safety
problem.  A March report by the National Conference of State Legislatures
suggests device-related distractions killed an estimated 600 to 1,000 mot=
orists
in 2001 and could kill 2,000 a year by 2004.  (Published news reports)

**

## RADIO EDUCATION:  HAM RADIO COURSE OFFERED AT PENN STATE

Amateur Radio is a part of the training being offered this fall to freshm=
en at
the Pennsylvania State University.  According to Brad Parola, KB3HQE, Vic=
e
President of the Penn State Amateur Radio Club, part of the course during=
 the
first half of the Fall semester included exposure to Amateur Radio.  Stud=
ents
were shown how to tune radios like the Ten Tec Pegasus, shown how to rece=
ive
PSK 31 signals, and were given a tour of the world famous Rock Springs An=
tenna
Test Range run by Dr. Jim Breakall WA3FET. Early in October, those studen=
ts who
were interested were given the opportunity to take their Technician class
tests.  So far 15 students have passed an Amateur service exam.  (KB3HQE)

**

BREAK 2

This is ham radio news for today=E2=80=99s radio amateur.  From the Unite=
d States of
America, We are the Amateur Radio Newsline with links to the world from o=
ur
only official website at www.arnewsline.org and being relayed by the volu=
nteer
services of the following radio amateur:

**
RESCUE UPDATE:  ZL1AMO CONDITION REPORTED UNCHANGED

We have an update in the medical condition of famed D-X'er  Ron Wright ,
ZL1AMO.   Jim Meachen, ZL2BHF, has the latest:

--
A bit of good news this week.  Wrights daughter Terri says the family vis=
ited
Ron in the hospital and he was sitting up in a lazy boy chair.  This is t=
he
first time any of the family had seen seen him out of the bed since he wa=
s
hospitalized.  Terri Wring says that Ron is also trying to communicate wi=
th
those around him and he looks a lot better than on previous visits.   =20

As reported last week, Wright suffered collapsed lungs while visiting Fij=
i.  He
was air lifted by an emergency air ambulance to Auckland New Zealand wher=
e he
was initially reported to be in critical condition and on life support. =20

The INDEXA =E2=80=93 the International D-X Association --  has establishe=
d a fund to
assist Wright and his family with the cost of air evacuating him from Fij=
i to
Auckland.   Donations go to the  ZL1AMO Air Ambulance Fund, in care of Bi=
ll
Jennings, W4UNP, P. O. Box 607, Rock Hill, South Carolina, 29731.  Sorry,=
 but
INDEXA says that contributions to this fund are not tax deductible.

>From Auckland New Zealand =E2=80=93 down under =E2=80=93 I'm Jim Meachen,=
 ZL2BHF, reporting
for the Amateur Radio Newsline
--

Updates on the fund and Wrights condition are being posted to the web at
www.papays.com/opdx.html  ( ARNewsline(tm), INDEXA, AA7UC)=20

**

## THE SCIENCE PAGE: WHALES YES =E2=80=93 NAVY NO

A federal judge has tentatively blocked the Navy from deploying a new ear=
ly
warning system because it might harm whales.  Amateur Radio Newsline's Br=
ucce
Tennant, K6PZW, has the rest of the story:

--

A Federal court has said no to a new high-frequency SONAR system  designe=
d to
detect enemy submarines at long range because it could further endanger t=
he
worlds whale population. But in making his ruing, the judge also said the=
 Navy
may use the sonar during wartime and must be allowed to train with it
beforehand.=20

In partially siding with environmentalists, the judge ordered both sides =
back
to court to begin formulating a plan balancing environmental and military
concerns. Environmental organizations say the Navy's powerful sonar syste=
m can
strand, maim or kill marine mammals.  The Navy disagreed.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

A few days earlier, a different judge ordered the National Science Founda=
tion
to stop firing high-intensity sonic blasts into the Gulf of California be=
cause
they harm whales.  So far there has been no comment from either the Navy =
or the
N-S-F.  (Published reports)

**

## HAM RADIO IN SPACE:  UO-22 IS BACK WITH US =E2=80=93 FOR NOW

G7UPN reports that U-O-SAT 22 is back on line and open for business.  At =
least
for the time being.

Chris tells the AMSAT News Service that new software has been loaded to t=
ry and
keep the downlink operating most of the time.  But says G7UPN, UO-22 is a=
n
older veteran satellite.  This means it may give problems in the near fut=
ure.=20
More information is in cyberspace at www.amsat.org  (ANS)

**

### INTERNATIONAL =E2=80=93 JAPAN:  JA SAYS NO TO PLT

Japan has said no to the introduction of Power Line Transmissions or P-L-=
T in
that nation.  Following extensive trials, the Ministry of Public Manageme=
nt,
Home Affairs, Posts and Telecommunications has decided not to permit thei=
r
roll-out for fear of interference to other services.

The Japan Amateur Radio League had  been actively working with the  gover=
nment,
radio astronomers, broadcasters and others  to assess the impact of P-L-T
systems on the radio spectrum.  The results of this P-L-T study in Japan =
is a
real eye-opener.  It showed conclusively that Power Line Transmission sys=
tem=20
emissions are harmful to High Frequency communications operating in the r=
ange 2
to 30 MHz.  Because of this Japan's telecommunications regulators have re=
fused
all requests from P-L-T manufacturers to operate these systems.  (JARL, Q=
-News)

**

### INTERNATIONAL:  GETTING ON THE AIR DOWN UNDER=20

Still in that region of the world, were you aware that New Zealand is one=
 of
very few countries in the world where licensed amateurs visiting from ove=
rseas
can immediately operate? =20

Well it is and a visiting amateur can get off an airplane, walk into the
terminal building and start operating on 144 MHz and above by simply sign=
ing
his own call sign portable Zed-L.  This, without the hassle of getting a
license and without paying a licence fee.

For more information on operating in New Zealand as a tourist or visitor =
take
your web browser over to www.nzart.org.nz  (NZART)

**

### ON THE AIR:  COMMEMORATING DIANA

Back here in the U-S-A, the first successful moon bounce experiment was
conducted by the Army Signal Corps on January 10th 1946.  And to commemor=
ate
the event, the Ocean Monmouth Amateur Radio Club will operate from the hi=

storic
Diana radio site on January 10th 2002.  The Ocean Monmouth group plans to
operate using Morse and SSB in the General and Novice Technician sub band=
s of
the 80, 40, 20, 15, 10 meter bands.  For more information on the Diana Pr=
oject
and for QSL info please visit the OMARC web site at www.qsl.net/n2mo  (OM=
ARC)

**

## DX

In D-X, F6COW is reporteed tobe operating from the 9S1X club station in t=
he
Congo.  He will reportedly be there until the 9th
of December.  (GB2RS)

Also, F6BLQ will participate in the ARRL 10 Meter Contest on the 14th and=
 15th
of December, also as 9S1X.  His operation will be  on SSB only.  (GB2RS)

And ST1MN is a new ham in the Sudan.   He will be active on all bands unt=
il the
end of June 2003.  Q-S-L as directed on the air.  (GB2RS)

A lot higher in frequency, FT1ZK, is active on 6 meters every afternoon =
from
Amsterdam Island.  The operator is named Caroline and she has a beacon
transmitter active on 50.086 MHz and running 24 hours a day. She will be =
on=20
Amsterdam Island until January 16th. QSL via F5JCB.  (VHF Reflector) =20

**

## THAT FINAL ITEM:  THE CANALS OF VENUS - DEBUNKED

=20
And finally this week lets turn our eyes toward the planet Venus.  Just o=
ur
eyes.  Not our telescopes.  Because if we do use a telescope we might mak=
e the
very same mistake made by a very famous astronomer regarding canals on th=
at
mist shrouded planet.  Q-News Graham Kemp, VK4BB, takes us into the cosmo=
s for
this one:

--
Turn of the century astronomer Percival Lowell is well known for promotin=
g the
incorrect notion that water canals had been built on the surface of Mars.=
  He

also drew a map of the "canals"  on Venus; the only problem was that no o=
ne
else could see anything resembling canals because Venus is always shroude=
d in
clouds.

Turns out that Lowell had narrowed the aperture of his 24" telescope down=
 to
about 3" to attenuate the bright light from Venus.  That little known fac=
t -
recently publicized - caught the attention of optical experts who realize=
d that
Lowell had unwittingly turned his telescope into a reverse ophthalmoscope=
, an
instrument used to examine the interior of the eye.  Instead of mapping t=
he
surface of Venus, Lowell was apparently mapping the shadows of blood vess=
els
and other structures on his own retina!

Sky & Telescope magazine explains the situation in detail, presents Lowel=
l's
sketch of the Venusian "canals," and a photograph of retinal blood vessel=
s.=20
The two patterns are strikingly alike.

>From Q-News Australia, I'm Graham Kemp, VK4BB, for the Amateur Radio News=
line.
--

You can see the pictures Graham reefers to in the online edition of Sky a=
nd
Telescope magazine.  Just take your web browser over to
http//skyandtelescope.com/news/current/article_648_1.asp  (Q-News)

**

> Not with HD on the horizon for first quarter in LA... IBOC/HD and AM stereo
> are incompatible.

Not if the tertiary digital sidebands (+/- 0 to 5 kHz) are not used. In that case, IBOC and C-Quam AM Stereo -- or even Kahn POWER-side -- can be transmitted simultaneously.  But I don't know of anyone who would want to listen to such a thing.  Analog AM -- mono or Stereo -- on its own can sound excellent, and low-bitrate digital can at least be made to keep its audio degradation to a tolerable level.  But try to put them together, and it's just a mess.

And given the choice, anybody with good ears would prefer hi-fi "AMAX" AM Stereo over IBOC/"HD Radio", which does offer a wider audio response, but is so polluted with 'artifacts' and simulated treble harmonics that it ends up sounding congested, wishy-washy, and metallic.  Here is a side-by-side comparison of the two, with the actual IBOC audio of 710 WOR compared with that of a local AM Stereo talk station, as received on a Sony SRF-42:

http://rvcc2.raritanval.edu/ktek9053/hdvsamax.mp3

To my ears, WOR's "HD Radio" digital audio sounds remarkably similar
to a RealAudio webcast at a whopping 20 kbps, as the following example
shows -- it is audio taken directly from WOR's STL, processed to
simulate going through their Optimod, and then encoded to RealAudio:

http://rvcc2.raritanval.edu/ktek9053/wor-hd.rm

Ditto on the Khan system.
We ran it on 1050 CHUM Toronto Canada when AM Stereo first started.
It was more stable and sounded better than CQUAM.
But after CQUAM got the nod in the US, we switched to CQUAM.
Most CHUM Group AM's still run CQUAM Stereo, even though many are talk now.
I have three AM Stereo receivers, all Sony, including a home receiver,
the stereo walkman and the SRF 100 portable.

My gripe is these orange sodium street lights. Especially the intermittent ones that go on and off all night. They ruin AM reception. They should all be removed and declared illegal.

Unless you have a zephyr or other type encoder/decoder I strongly suggest
you record the VO and send the file via broadband.

"I was clueless! Can any of you great radio fans out there give me story of the origin of the term?"

The Sig-Alert was named after radio personality, engineer and KMPC co-owner Lloyd Sigmon, who came up with the idea in the mid-1950s. The original system used a special decoder connected to a tape recorder to automatically record traffic bulletins sent out by the LAPD on its dispatch frequency, so that they could be played back by local stations. (http://www.snowcrest.net/marnells/sigalert.htm) The present Emergency Alert System uses much the same store-and-forward concept for weather and most other warning messages, though now the recorder is a digital RAM buffer built into the decoder unit.

TURN DOWN THE POWER IF SOMEONE COMPLAINS
SPEEDWAY DINGED $8K FOR 1 WATT
The FCC has fined the operators of California Speedway for operating one watt on 104.7 without a license. The power was measured at 250 times over the legal limit, which the Speedway is disputing. The Speedway claims that the station was only operated during events and believed that the equipment is FCC compliant. They claimed that the manufacturer told them to turn down the unit's output control if it received any complaints of interference during use of the equipment. The Speedway was fined $8,000 down from $10K based on the Speedway's past record.

As always, Google it.

Go to www.google.com and enter Sigalert.

The third item will give you the origin of the term.

Y'r welcome.

GHaar

Yup.

Easy to maintain, fairly reliable, but vulnerable to RFI in high-RF environments.

Q What are Sig-Alerts?
.
A. "Sig-Alerts" are unique to Southern California. They came about in the 1940s when the L.A.P.D. got in the habit of alerting a local radio reporter, Loyd Sigmun, of bad car wrecks on city streets. These notifications became known as "Sig-Alerts." Later Mr. Sigmon developed an electronic device that authorities could use to alert the media of disasters. Caltrans latched on to the term "Sig-Alert" and it has come to be known as any traffic incident that will tie up two or more lanes of a freeway for two or more hours. And, yes, Mr. Sigmon is still around and very proud of his namesake.

If you search the net, and search under LPFM equipment, you will find suppliers.

Three things to remember -- and others (the "pros" in here may augment this) - if you're in the United States:

1. Don't transmit without a license.

2. If you are applying for an LPFM license and are waiting for a construction permit or action on the application - DO NOT BEGIN BUILDING YOUR STATION! You are only to do that *after* you have the construction permit in hand. It doesn't hurt to start planning - but don't start building.

3. If you are perusing catalogs for transmitting equipment - and you are going to use it as part of an LPFM station - the transmitter MUST be "FCC Type Accepted". The FCC will not grant exemptions to this.

Good luck.

Hello,

I am the CE of a small FM educational.  We don't have much money, but have recently purchased a new transmitter and upgraded our processor from CBS gear to something a little more modern (1980's).

We're running a DBX 168 (average level processor), a CRL SEP-800 (4-band limiter), a Hnat Hindes stereo generator/clipper and a Mod Sciences Composite Clipper.

Our transmitter is a Nicom NT-300 we have a Belar FM monitor and Stereo monitor.

The Belar FM monitor (FMM-1) is indicating an average level of 90% modulation.  We have been able to clip the audio to the point where the monitor can look like tone (with less than a dB of deviation). The audio is clean, but we are not as loud as the mod monitor would indicate.

If I increase the average level, the peak flasher starts to go off at 105%.

BUT

Checking the deviation meter on the exciter, even with the peak flasher going off, we are NOT near 75kHz deviation according to the exciter.

The Belar stereo monitor, in the TOTAL mode with the PEAK setting, the modulation looks about 5-10% lower than on the Belar FM monitor.

The Belar FM monitor was recalibrated by Belar in September 2001. Should I suspect it?  I do not have access to scopes right now... when it was reinstalled with the new exciter, I did proof the system with borrowed scopes and it looked good... I am wondering if there is a problem... or... because it is an old monitor... I know some newer mod monitors (like the Belar Wizard and the Mod Sciences monitor) are more accurate allowing an extra dB or 2 of audio and still remaining legal because the peak detectors are more accurate.

Should I increase the modulation to reference 75kHz on the Nicom (where we sound as loud as others) or should I believe what the Belar is telling me?

Are you running any SCA subcarriers?

>We have been able to clip the audio to the point where
>the monitor can look like tone (with less than a dB of deviation).
>The audio is clean, but we are not as loud as the mod monitor would
>indicate.

What is your station's format?

>If I increase the average level, the peak flasher starts to go off at
>105%.

If the monitor was recalibrated a year ago, it's probably reasonably accurate.

What does your audio chain look like? How does your audio get from your studio to your transmitter site? Are the Hnat Hindes and the composite clipper (CP-803?) located at the studio or the transmitter?

I'm not familiar enough with the Nicom to know whether or not it might ring. Try feeding a 100 Hz square wave into it and look at a trustworthy receiver (not the FMM-1) to see if what comes out still looks like a square wave. If you see any overshoot, and you are sure the receiver isn't producing it, then it's likely coming from the exciter.

Of course, you'll need an oscilloscope to do this.

What are you running for a studio console? Does it contain any transformers?

Are you playing CD's? Vinyl? Hard disk audio? If hard disk audio, is it linear or MPEG? If MPEG, at what bit rate?

There is a trade off between loudness, brightness, and distortion. If your equipment is properly set up, you should be able to optimize any one of these at the expense of the other two. If the audio is clean to start with, you will be able to achieve more loudness at the same apparent brightness and distortion than if you start with dirty or compromised audio.

The Belar indicates peak modulation, not loudness. Subjective loudness is a very complex issue (Bob Orban has made a name for himself in the world in part because of that very truth).

> The Belar FM monitor was recalibrated by Belar in September 2001. Should I suspect it?  I do not have access to scopes right now... when it was reinstalled with the new exciter, I did proof the system with borrowed scopes and it looked good... The only difference between your Belar and the newer monitors is that it does not intentionally ignore given amounts of peak overshoot. I would trust its reading (especially if it has been recently calibrated) over any meter on the exciter itself.

> Should I increase the modulation to reference 75kHz on the Nicom (where we sound as loud as others) or should I believe what the Belar is telling me?

I would get a "second opinion". Contact one of the engineers at a nearby commercial station and get him to look at your signal with his frequency agile monitor. If your Belar disagrees with what he is seeing, do a Bessel null calibration on it. You will be able to look after your own house from then on.

I have noticed this alot with normal traffic signals around here,while
listening to a local "peanut whistle" FM station.. If I stop at an
intersection,under the light,the station fades out,and nothing but
*BZZZZZZZZZT* fades in.
Havn't noticed it with the LED lights yet...Hmm.
Quite interesting to hear all the lights at an intersection change...
*BZZZTTTTT*  *BRRRRRGGGHHHH*   *FZZZZZZZZZZ*   *CLUNK* *POP*
*BZZZZZZZTTT*

I'm starting to be able to figure out which light is changing and
whatnot just by the sounds!...  (Is that pathetic or what?!)

Robert J. Cirasa and I have just written a short story, based on the OTR series "Dimension X" and featuring my Willoughby and the Professor characters which appear in a new anthology book, entitled: It's That Time Again! The New Stories of Old Time Radio, scheduled to be published in mid-December 2002. The story we wrote is called "Willoughby Goes and Gets It." The concept for the story was to work within the more na�ve and wide-eyed science fiction style made popular in the 1950s while using original characters from our own current national public radio series, "The Whithering of Willoughby and the Professor." The result, we believe, is a both post-modern tribute to "Dimension X" and a story that holds up on its own merits. The book was edited by Ben Ohmart.

You can get a copy of this book at:

http://bearmanormedia.bizland.com/index/id18.html

Should make a great Christmas gift!

Joe

More details:

It's That Time Again!

The New Stories of Old-Time Radio

The first anthology of NEW fiction based on the beloved OTR characters and shows we know and love.

1. Our Miss Brooks - "One Principal Too Many, One Principal Too Meanie" by Clair Schulz
2. Tom Mix - "Tom Mix And The Mystery Of The Bodiless Horseman" by Jim Harmon
3. Candy Matson YUkon 2-8209 - "The Japanese Sandman" by Jack French
4. The Clyde Beatty Show - "Perils of the Tiger Barn" by Roger Smith
5. The Green Lama - "The Case Of The Bashful Spider" by Bob Martin
6. Sgt. Preston of the Yukon - "A Call From the Storm" by Jim Nixon
7. Quiet Please - "The Cradle Of Peace" by Martin Grams Jr.
8. The Halls of Ivy - "A Matter of Ethics" by Carol Tiffany

9. Captain Midnight - "The Vanishing Ruby" by Stephen A. Kallis Jr.
10. The Bickersons - "You've Got Me, John" by Ben Ohmart
11. Ma Perkins - "The Letter From John" by John Leasure
12. The Black Museum - "The Ticket Stub" by Michael Leannah
13. Honest Harold - "Attack Of The Crawling Things From Outer Space" by Justin Felix
14. Dimension X - "Willoughby Goes and Gets It" by Joe Bevilacqua & Robert J. Cirasa
15. Lum & Abner - "A Pine Ridge Christmas Carol" by Donnie Pitchford
16. Frontier Gentleman - "One Card Draw" by Michael Giorgio
17. Pat Novak, For Hire - "A Poole of Blood" by Stephen Jansen
18. Yours Truly, Johnny Dollar - "The Paddy Rose Matter" by Patrick W. Picciarelli
19. Rogue's Gallery - "The Case of the Missing Bandleader" by Bryan Powell
20. Inner Sanctum - "Concerto in Death Major" by Christopher Conlon

For sale:

Part ownership in fulltime AM radio station in Idaho.

Small market. Only station in town.

1 KW. Owner says that his consultant can get them upgrade to 50,000 watts days NON-DIRECTIONAL!! Lower power at night but sufficient to cover city of license. That would make it the 2nd most powerful AM daytime signal in Idaho!

Joint venture. Active or inactive investors with at least $10,000 each are welcome. All investors would be on the board with full voting rights if desired.

Please call (478)741-1710 in Macon, GA or email to:

wrecktech@yahoo.com

I am a semi-retired broadcast engineer. Last position was Chief Engineer for a 5 KW AM in New York City. 'nuff said? !!!

73,

Meyer Gottesman, W6GIV

Hey,

The station I work for uses a Sony Model WRR-805 UHF Synth Tuner with Mic. and are looking for a manual for it.

If you know where a site that may have this, or know where I could locate one, please reply  by e-mail:

Pata@rnntv.com

Thanks!

Pat Alder

Are you absolutely positive this isn't coming from the traffic signal
controller, which among other things employs microprocessors, triacs,
and RF metal detector loops? I, for one, have heard interference from
traffic signals long before the LED signals were employed.

Hi,

If you have any airchecks from the Tri-cities, Washington, from the
60s and 70s, please email me. I'd love to know what you have. Any

stations and formats would be fine:  KALE, KORD, KOTY, KONA, KIOK,
etc. Also would like airchecks of Pittsburgh, PA., from the 70s too.

If you've got 'em, drop me a line.

Did anybody here get a recording of the last hour of KKSU and the last switch over to WIBW in Topeka?

I am in Des Moines, Iowa and this time of year, there just isn't enough signal from down there. I had the tape rolling, but it's difficult to make much out of it.

Is there any interest here for a network of Production people helping each
other (across the country) deliver better or more appealing commercial
product for their clients ?

I'd like to trade notes with other Prod Directors as to technique, new uses
for old gear, tweaks, tips, etc.

Maybe we could make a few extra bucks along the way

Provided you're talking about writing and producing commercial advertising, then if you ask me, your best bet is take one of the commercial classes with Dick Orkin that Dan O'Day puts on each late-summer.  You can buy the tapes for the previous ones.

Good commercials are not about fancy editing or using the gear in novel ways but relating to people.

If you're talking about something else, please disregard.

I got some segments from 12:25-12:45 and a good chunk of the evening from
4:45-5:35. I'll have to go over it... some short gaps in the broadcast.
There's a bit of interference, especially when I had the monitor on, but I
was able to hear everything clearly.

The interference is at its strongest with the car's antenna directly
underneath the offending traffic signal light. The AM noise/static
that is generated by the LED signal may only radiate within about a
10-foot radius of the signal, but it is still enough to be very

annoying, especially since most intersections have two signal stalks (one on either side of the intersection) so you will hear two bursts of interference on the radio as you drive past.

Amateur Radio Newsline Report 1320 - November 29, 2002

Amateur Radio Newsline report number 1320 with a release date of Friday, November 29, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.  The International space station gets a new crew and all are ham radio operators.  Newly licensed Solomon Island hams take on an emergency communications challenge and good news for a California ham.  These stories and more are coming your way on Amateur Radio Newsline report number 1320 right now.

(Billboard Cart Here)

**

HAM RADIO IN SPACE:  NEW ALL HAM CREW ARRIVES AT ISS

The international Space Station has a new crew which plans to start operating the ARISS Amateur Radio station in about three weeks.  They boarded the staton on Monday the 25th of November.  They plan to be there for about 6 months.  All three are licensed hams.

Look for Ken Bowersox KD5JBP, Nikolai Budarin RV3FB and Don Pettit, KD6MDT. They will use the Space Stations calls ... RS0ISS over Europe and NA1SS for the United States. Contacts can be heard on the downlink frequency of 145.80 MHz.

They replace Peggy Whitson, Valerie Korzun and Sergi Treschev. Valerie, RZ3FK, was very active, on the air almost every day, while Peggy conducted many memorable school contacts. (ARISS)

**

RESCUE RADIO: SOLOMON ISLAND NEWS HAMS PROVIDE DISASTER RELIEF

We reported their graduation last week. And while the signatures on their ham licenses may not yet be dry, a group of Solomon Island hams are already off on their first rescue radio adventure to Malaita Island:

--

Thats right Roy. Q-News reports that three graduates from the Amateur Radio Training School of the Solomon Islands have gone by ship to provide emergency communications for flood affected areas on Malaita Island, near Guadalcanal. With them are with 19 tons of rice along with officials of the National Disaster Council.

These new Hams will operate a ham radio station at the Red Cross clinic on South Malaita island. They will report on the distribution of supplies to the National Disaster Council HQ in the Capital of Solomon Islands.

This is the first humanitarian deployment of the school's initial graduates. It also provides the Solomon Island hams their first real experience in helping people with radio knowledge of Amateur Radio.

For the Amateur Radio Newsline, I'm Bill Pasternak, WA6ITF.

--

The three hams making the trip are identified as H44MKA, H44WSB and H44SF. As we go to air they should be operational from a Red Cross clinic set up on the south end of the island. More information is on the web at www.h44A.com (Q-News)

**

RADIO POLITICS: HAM CCR BILL DIES AS CONGRESS CONCLUDES SESSION

The 107th Congress has adjourned without taking any action on an ARRL sponsored legislative measure to free Amateur Radio of land use restrictions commonly known as C-C and R's. The ARRL indicates it

plans to try again when the 103rd Congress convenes early in 2003.
(ARRL)

**

RADIO AND THE LAW:  CALIFORNIA SUPREME COURT SIDES WITH HAM

Still with antennas and land use, we have an update on the court battle of  Mark Abrams, WA6DPB versus the city of Rancho Palos Verdes California.  Amateur radio Newsline's Bruce Tennant, K6PZW, has the good news:

--

The good news is that the California Supreme Court has upheld the right of a California property owner to use antennas on his property for any reason he wants.  It did so on  Friday, November 15th when it denied the request of the the City of Rancho Palos Verdes to hear an appeal of the decision of the California State Court of Appeals in the case of The City of Rancho Palos Verdes vs. Mark J. Abrams.  This means that the decision of the Court of Appeals is now state law.

The earlier decision of the said that Amateur Radio operators are entitled to an "exalted" status, thus giving amateurs new hope for getting antenna arrays approved.   And Abrams says that there are many precedents that can be extrapolated from this ruling, but he says that the case clearly establishes that a city in California cannot tell a resident what to do with an  antennas once they approve the actual array.

According to Abrams, the legal precedent applies only to California. But he says that when most states are looking to set a precedent, they will look to either California or New York.  And since there is no precedent in New York on this subject, it makes California the one to serve as a guide to other states.

For the Amateur Radio, I'm Bruce Tennant, K6PZW, in Los Angeles.
(WA6DPB)
--

Abrams tells Amateur Radio Newsline that he is now going to file with the Federal Court of Appeals to declare the City's appeal of his injunction against the City of Rancho Palos Verdes as moot.

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the WE4B repeater of the Palmetto Amateur Radio Club serving Miami Florida.

**

RESCUE:  ZL1AMO REPORTED ON LIFE SUPPORT

The Radio Society of Great Britain reports that well-known DX'peditioner Ron Wright, ZL1AMO, has been taken ill. According to Wright's daughter Terri, her dad suffered collapsed lungs while in Fiji. He was air lifted by an emergency air ambulance to Auckland New Zealand where he was initially reported to be in critical condition and on life support.

A later report from Terri Wright says that her father is currently in stable but guarded condition. The RSGB says that Wright had been operating from Fiji as 3D2RW. Regular updates on Wrights condition are being posted to the web at www.papays.com/opdx.html (RSGB, ZL2BHF)

**

ENFORCEMENT:  EX-HAM ARRESTED FOR ALLEGED ATTACK ON POLICE OFFICER

A former ham who resigned from Amateur Radio has been arrested in the hills of North Carolina following a manhunt that has lasted over a year. Steve Anderson, the ex-AA8DP, is accused of shooting at a police officer.

Anderson was a member of the Kentucky State Militia, a civilian paramilitary group, until April 2001. As previously reported, that militia group dismissed Anderson because he refused to shut down his unlicensed radio operation. (Published news reports)

**

ENFORCEMENT:  ATT FINED FOR TOWER VIOLATIONS

The Federal Communications Commission has released an order imposing a $117,000 fine against AT&T Wireless Services, Inc. for safety-related violations of the Communications Act and the Commission's antenna structure rules. This action follows routine antenna structure inspections and related investigations conducted by Commission field offices throughout the country.

Before issuing the fine the FCC determined that AT&T Wireless committed seven separate violations of the antenna structure requirements as outlined under Part 17 of the Commission's rules. Included were failure to register, light, and paint antenna structures, and failure to post antenna structure registration numbers at the base of the antenna structures. (FCC)

**

ENFORCEMENT:  VICTORVILLE CA PIRATE STILL ON THE AIR

Another unlicensed station has been discovered in California. According to Chris Compton writing in the CGC Communicator, he noticed a pirate operating on 90.9 MHz in Victorville while driving through the town not that long ago.

Compton, who is a Director of Engineering said that the unlicensed transmitter was taking out KGZO on 90.9 MHz in Shafter. The pirate was also heard doing commercials for his Nextel Store in Victorville.

Now here's the best part. When Compton called the unlicensed operator, the person responded that he had a "demonstration license" from the FCC and that it was good for one year. He told Compton that the licensed allowed him to "demonstrate" the line of transmitters he was selling along with custom built antennas for the FM band. He then asked Compton if I wanted to buy one.

The first monitoring of the pirate was in September. Compton said that he reported the situation to the FCC. He adds that he was in Victorville not long ago and the pirate was still on-the-air. (CGC Communicator)

**

RADIO POLITICS: JONATHAN ADELSTEIN SWORN IN AS FCC COMMISSIONER

FCC nominee Jonathan Adelstein has been sworn in to fill the Commission's remaining open slot. Adelstein will finish out the term of former Commissioner Gloria Tristani, which ends in June.

According to the ARRL Letter, the White House nominated Adelstein last February. But the nomination of the Democrat and a prot,g, of South Dakota Senator Tom Daschle had been held hostage for most of this year because of political wrangling over several judicial nominations. (ARRL)

**

CONVENTIONS AND HAMFESTS: HAM RADIO UNIVERSITY 2003

LIMARC -- The Long Island Mobile Amateur Radio Club - will hold the 2003 edition of its very popular Ham Radio University on Sunday, January 19th. Location is the East Woods School in Oyster Bay New York with the doors opening at 8 A.M. Eastern Standard Time.

Ham Radio University is a day-long session of intensive training in just about every aspect of Amateur Radio. The focus will be "hands on" with many demonstrations. And this year there will be special forums geared to the non-ham as well as the experienced ham radio operator.
There will also be a V-E testing session for those who would like to take an FCC exam and a Special Event Station set up and operational on the High Frequency bands.

Ham Radio University is a cooperative effort between over twenty clubs and organizations in the New York City- Long Island area. It is also the American Radio Relay League, New York City-Long Island Section Convention. For more information about Ham Radio University please contact George Tranos by e-mail to N2GA@arrl.org. (LIMARC)

**

## GATHERINGS AND MEETINGS: MORSE CAMP IN THE U-K

A Morse code training camp is planned for the weekend of the 11th and 12th of January 2003 in the United Kingdom. The venue will be The Beacons, Simons Lane, in the town of Frodsham. For further details please contact either Catherine Pearson at RSGB HQ or Kath Wilson, the RSGB Regional Manager for North West England. Pearson can be contacted on by e-mail: toar.dept@rsgb.org.uk. Wilson can be reached at dwilson@btinternet.com (GB2RS)

**

## BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

## HAMVENTION 2003: "THE YEAR OF THE YOUNG"

The 2003 Dayton Hamvention will have "The Year of the Young" as its overall theme. Planners say that the show's focus will be on the young ham and on bringing 12 to 18 year olds into the Amateur Radio hobby. More information will be posted on-line at www.hamvention.org as soon as final plans are made firm. (Dayton Hamventionƒ)

**

## EMERGING TECHNOLOGY: MICROSOFT EASES RESTRICTIONS ON NEW XP MEDIA CENTER

Microsoft says that it will relax restrictions on how users of its new multimedia Windows XP Media Center operating system will be able to copy and distribute TV programs. As a result of the changes, users will be able to view unprotected TV programs copied onto DVD on any PC with Windows XP Media Center Edition. TV programs with built-in copyright controls will still prevent users from making copies.

Originally, Microsoft had developed the software so that users could only watch television programs stored on the hard disk or copied onto a DVD on only one machine. That being the PC used to record the original content. (Microsoft)

OUR HERITAGE:  REMEMBERING THE RADIO OPS OF WWW2

The event that lead to the United States becoming involved in World War 2 will be commemorated by Amateur Radio.  This, as a group of survivors of the Japanese sneak attack on Perl Harbor visit the USS Hornet and take to the air this coming December 7th.

The SSB Frequencies will be 7.260,  14.320, 21.320  and 28.320 MHz. CW operations will be found on 3.530,  7.030,  14.030, 21.030 and 28.030 Mhz. Operating hours will be from 0900 to  1700 Pacific Standard Time.  A special QSL Card will be made available for those who make contact.  (KB6SSN)

**

INTERNATIONAL - CANADA:  VC2C ON 60 METERS

An update on whats become an international version of the U-K five megs experiment.  Word from Canadian that station VC2C was recently given special permission by the Canadian radio authorities to operate on the 60 meter band.  It took to the air between the 21st and 25th of October. During that time, VC2C made two-way C-W contacts with four G stations, one GM and one GI operator.  All contacts took place on 5.280 MHz.  (RSGB)

**

INTERNATIONAL - NEW ZEALAND:  NZART CALLS FOR ELECTIONS

New Zealand's national ham radio society, the NZART has placed a call for nominations for those who want to serve on the Council and as the organizations President.  NZART says that New Zealand hams have until December 31st to file their nominations.  (NZART)

**

ON THE AIR: WSWSS 2 METER NET GOES PSK-31

A popular weak signal net is going digital check-in.  David Peters, KI6FF, says that the Western States Weak Signal Society 2 meter Southern California Technical Roundtable net held Tuesdays at 8:30 PM Pacific on 144.130 MHz is going PSK 31 only for check-ins.  Once the evenings roster is complete the net will move to SSB and help people who need to get their equipment and software setup and checked out. (VHF REflector)

**

DX

In D-X, word that G0UIH will be in Australia and active as VK2IAY/P until the 15th of December. During this period, Steve will operate from several different rare IOTA island groups. Look for him on or around 14.260, 18.145 or 21.260 MHz on SSB only.

And NK3T will be active from McMurdo Station Antarctica as KC4 slash NK3T until late January or early February. QSL via his home call.

Also, special event station ER60SB will be on the air from the 23rd of January through the 2nd February 2003. This to commemorate the 60th anniversary of the Battle of Stalingrad. QSL via ER1DA either direct to Valery Metaxa, ER1DA, P.O. Box 3000, Chisinau, MD-2071, Moldova or via the bureau. (This weeks DX courtesy GB2RS)

THAT FINAL ITEM: FIGHTING BACK WITH A PHONE

And finally, here's one from the pages of the French e-magazine La Companion that we found surfing the Internet. Its the story of fighting back with a cellular telephone. Amateur Radio Newsline's Norm Seeley, KI7UP, has the curious details:

--

Maybe its all net-lore, but supposedly a female bus rider in a Paris suberb was annoyed by a loud-mouthed cellular telephone phone user a few rows in front of her. The fellow so boisterous that she could not even hear her companion seated right next to her.

Then the cellular bully supposedly made the mistake of mentioning his cellphone number during the conversation. A few minutes later, the lady picked up her own phone, called the man and asked him to: "...be quiet please".

But he refused. In fact he was so incensed by the call that he started to use all kinds of unsightly language. That is until he finally realizing where he was and that everyone on the tram was staring directly at him.

Undaunted, he supposedly stood up, uttered a few more choice words and exited at the next stop. The woman and her companion received a round of applause.

For the Amateur Radio Newsline, Norm Seeley, KI7UP

--

And what else needs be said! (Tommorrows Technology)

Does anyone recognize the following lines from a radio jingle?
I doubt that I have them verbatim and they are not complete.

He's gonna play the top 10 and the bottom 50...

You know his name, it's oh so nifty...

So let's start to swing and let's start to sway...

Hey there, fellows!  Hey there, gals!  Here's one of your real DJ
pals...

Appreciate any information - dates, source, stations?
E-Mail direct or post here.

Thanks!

Dave Williams

I listen over the net to the following radio shows while I am doing other things around the house. Helps me to learn more about all that is going on in our efforts. Perhaps you will find the programs of interest, also.

Cultural Baggage - "The Unvarnished Truth" on Drug Prohibition hosted by Dean Becker is broadcast and netcast every other Friday evening from Pacifica Radio: KPFT, Houston, 90.1 FM http://www.kpft.org/

Below is a list of the guests in this one hour radio show so far, along with a link to the show's archive for your listening enjoyment in low bandwidth (ok for modems) RealAudio .ram format. Besides the guest(s), each show features news, commentary, interviews with newsmakers, listeners calling in to ask questions of the guests and more.

More information on the past shows and announcements of future shows are at http://www.cultural-baggage.com/kpft.htm

----

Friday, Nov. 22

Nora Callahan, Director of The November Coalition http://www.november.org/ , publisher "Razorwire" and national organizer (with Common Sense for Drug Policy) of the ongoing "Journey For Justice" http://www.journeyforjustice.org/ that seeks the end of the drug war and the freeing of thousands of prisoners sentenced to mandatory minimums.

http://www.rwonline.com/reference-room/special-report/01_rw_ams_1.shtml

One of the things I noticed was ...

"AM audio fidelity also would be improved with the elimination of asymmetrical modulation processing, which inherently distorts the audio waveform and often can introduce inconsistencies in loudness between male and female voices. "

I guess if you have "The higher modulation capability would provide up to 6 dB of greater loudness, improving the effective signal-to-noise ratio in the receiver. " then asymmetric operations won't be as important, but I believe the new AMS system would preclude such processing.  Otherwise, AM stations would use it to make their stations even louder.

OTOH if AM stations were to switch to symmetrical modulation processing, the sound could approach high quality albeit a tad quieter. But then again they could clip it to death and have it really loud.

Just my 2�, your opinion may vary.

Eric,

Thanks for your reply
Sounds like good honest advice to me.
Where are you located?

My intent is to find the (probably) small group of people that can trade notes in positive ways to improve the quality of what they're doing.

In my small town of Astoria OR I possess the good fortune of making (almost) everything work for clients.
we have six reps, all keep me busy. I am fortunate in acheiving close to 100 per cent client satisfaction.

It takes a large portion of my time but I love it.

I start with the facts then decide production direction. I am trusted by clients.
They have a lot more faith in me that I do.
Sometimes those ideas are like giving birth.
I don't have anybody to trade notes with here.
It's the first technical job I've experienced where I'm the guy everyone else goes to for advice.
I've got a lot to learn yet, therefore the thought of trading ideas.

Thanks
Roy

How would one find out the name of the background music used in a national ad? It is an ad for McDonalds, and the music sounds like it is from the musical "Cats."

Thanks

Tom

The place to start is the question "WHERE?"... There are 5kw AMs available in many markets.  There are also some FMs available.  The only problem you are going to run into is that all frequencies have been taken (for many years) in major metro areas.  In those areas, expect to spend a big pile of dead presidents to buy a station.  (That's about the only way to get one these days..)

Considered cable casting?  Go to your local cable provider, and ask how much to rent FM space there.

Hi,

I do believe that the only efficient computer based radio system for broadcasters would be a "database driven networked software system", including "assets management". All "major" DTR (DeskTop Radio) firms use this technology. Presently they are quite an expensive proposition. I know how to build such a system for much much less.

I would like to start a DTR firm and I am looking for partner(s)/investor(s).
A new line of products may be available for the next NAB exibit.

The system will include:
   Audio players, recorders, and editors
   ON AIR Automation
   Database MetaData (info about audio files) management
   Network capability
   System remote control capability
Our target price would be around: $100 -> $500 per site

Amount needed: $10 000

DTR FIRMS:
   http://www.dalet.com (solutions -> radio solutions)
   http://www.netia.net/site_netia/mainus/radio/radio_assist7/radio_assist.php
   http://www.radioman.fi (products -> Jutel RadioMan)
   http://www.david-gmbh.de/English/index3.htm
   http://media.vcs.de/en (products -> Dira)
   http://ptophetsys.com (ProphetRadio)
   http://www.mediatron.com

Hardware:
   http://www.broadcasttools.com/
   http://www.rdlnet.com
   http://www.videoquip.com/
   http://www1.leitch.com/
   http://www.radiosystems.com  (StudioHub)

I am working since 22 year for a major radio broadcasting network in Canada. I am presently one of the users support for a 440 user DTR (DeskTop Radio) system (one of my jobs...). I am on the selection/evaluation comitties for DTR  systems. I am an engineer in electronics specialized in digital systems (automation, processing and remote control). In 2001 I received the an award (outstanding technical achivement) for the design of a transmitter remote control via satellite used for special news bulletins on the network. I also

design and built a remote control and automation system for all
satellites transmission of a northern radio network. Graduated from
l'�cole de Technologie Sup�rieure in Montr�al, I am a senior member of
l'Ordre des Ing�nieurs du Qu�bec. This professionnal association has
one of the most rigourous code of ethics.

If your are interested in the project, you may write to:
(Excuse my English, I am french)

Hello All

I have a FT 920 with AM filter and MD 100 mike with the MFJ Versa Tuner V that I will Trade for a Yaesu FT 990. I also have the technical supplment for the FT 920. Anyone interested I am in the Atlanta area. I will meet with in a 70 mile radius of Athens GA. My email is oris@dirtball.com.  I am in the Atlanta area. I will meet with in a 70 mile radius of Athens GA.

I Also Have a FT 1000MP that needs work. The frequency display blinks. I was told that there is a problem in the Phase Lock Loop curcuit. Milton Lord at http://www.n4da.com  I will trade for   a FT 990 Or simlar HF rig. I also have a working Icom AT 500 antenna tuner that I will trade for a Kenwood TS 50 or any small 100 watt continuos coverage HF rig. I need a moble rig. I also Have a Henry radio 2KD-5 Amplifier (pair of Emac 3-500, New Power supply Capacitors, 100 in gets you 1250 out) that I will trade for a FT 990 or FT 1000.

I also Have a Pentium III 500 Mhz computer  40 X cd rom Turtle beach CD burner 128 K of ram  sound card Network card  1 gig hard drive keyboard and mouse that I will trade for a HF rig.

Anyone intereAnyone interested I am in the Atlanta area. I will meet with in a 70 mile radius of Athens GA. My email is oris@dirtball.com.  I am in the Atlanta area. I will meet with in a 70 mile radius of Athens GA.

Thanks for Reading and Happy Holidays
Oris

Agreed! AM was great for decades and our highly electronic society with newly added digital technologies are REALLY raining on AM's parade. Time to get down with IBOC (actually DAB, IBOC is a band aid in my opinion) and lose AM (and FM) as soon as possible.

> I don't want to rain on your parade, but this is just one more nail in

Wow...this guy is either a prophet or he worked in radio recently. I'm one of those people (who still works in radio--part time) and HEAR this problem more and more! People in the business don't really understand how even digital audio can be degraded quickly no matter how good it initially sounds. And I hear the compression on air all the time!

ch474@freenet.carleton.ca (Craig Jackman) wrote in message

WHFS(FM) 102.3 MHz, the first FM stereo station in the DC area, used an "Iron Fireman" converted to stereo. 40 years later I can't remember if I bypassed the input transformer or used another means of coupling. Since I had to get Type Approval/Acceptance for the transmitter, the diagrams remain somewhere in the FCC's files. I didn't keep them when we sold the station, and I'm sure the succession of owners since then threw them out with that composite transmitter.

I can't recall anyone complaining about the audio quality of the station's output.

Bob C.

Hello!

http://www.rarebritradio.co.uk

Rare Brit Radio plays music from all sorts of Artists and from
different genres such as;
Britpop: The Beatles, David Bowie and Pink Floyd to more recent ones
Blur, Oasis, Gorillaz, The Coral, Electric Soft Parade....
Hip-Hop & Funk: Tupac, Biggie, Grandmaster Flash, Kool & The Gang....
70s, 80s and 90s classics: Queen, Status Quo, Tina Turner....
.... And that just scratches the surface! There are too many styles
and Artists to list here so if you like what you've read tune in! And
if your favourite Artists aren't being played tell us! The station is
for you after all. Interaction is encouraged, we want to play what you
want to hear! :)
We're also training people from scratch who want to be presenters,
this is a golden opportunity for those wanting to enter the industry.
Contact details are on the site :)

Dylan

The solid-state inverting amplifier was the tactic we filed for Type Approval. Later on, when the rules became less restrictive and did not micromanage the composite chain, we experimented with the 111C coil. It didn't have quite the stereo separation the amplifier did, but it met spec and the noise was better.

> I can't recall anyone complaining about the audio quality of the station's
> output.

What about noise? I recall that those last few db to push it south of -60db came with very great effort. There was lots of tube swapping and mechanical isolation gyration to keep that noise down.

One thing that hasn't been mentioned about the Iron Fireman was its half-frequency output. That meant that one used it only in a suitable legacy RCA transmitter (like the BTF-10B we had) or devised some sort of outboard doubling stage.

As it turned out, the BTF-10B survived our Iron Fireman, so we had fun converting the doubler stage to on-frequency so that we could employ a Collins 310Z-2 replacement exciter. Of course, keeping the BTF-10B putting out 10KW with its funky triodes, big cavities with big sliders, grid assemblies, cranky tuning motors, mercury vapor rectifiers, and on and on was an adventure novel in itself.

They're already fired. Prophet can't answer the phone, and it's the only
thing inhabiting most CC studios. Beware, robot radio.

Different strokes for different folks.

The radio broadcasting situation in Africa is surely entirely different from
that in the USA.  The radio situation in OZ is surely quite different from
that in the USA, etc., etc.  Even Canada hasn't had the great proliferation
of modest-power AM stations squeezed together that we find in the USA, yet
Canada is trying to go Eureka DAB.

> Just curious -- where can one get a part 15 C-Quam transmitter, and how
> much does it cost?

http://www.amstereoradio.com/

Click on "Projects", then scroll down to the bottom of the page.

$100.00 US, fully assembled and tested, or build one yourself using the schematics and PC board prints available online.

It is crystal-controlled, using a crystal of 4 times the frequency you wish to transmit on -- so, for a 1500 kHz signal, you would use a 6.000 MHz crystal.  Output power depends on what final RF amp transistors you use, and what voltage you feed them with; with standard 2N222-type transistors and a 9-volt supply, it is within the typical 100 mW FCC Part 15 limit.  Versions up to about 2 watts have been built for users outside the USA (these little AM Stereo transmitters are in use all over the world, from South Africa to New Zealand to the UK).

The audio bandwidth is only limited by the audio you put into it, and by the receiver you use.  When rebroadcasting FM Stereo audio through this transmitter and a hi-fi AM Stereo reciver, the 19 kHz pilot tone is visible on the spectral analysis graph of the received AM audio!

With only minor circuit modifications it will work just as well on virtually any frequency from Longwave to Shortwave.  With other circuit tweaks it can transmit using the Kahn/Hazeltine or Magnavox AM Stereo system, instead of the Motorola C-Quam system, for testing of older "multi-system" AM Stereo receivers, or for the old two-radio trick with Kahn ISB-type AM Stereo.

Anyway, what you hear from "KJFE" still falls far short of the true quality that this transmitter is capable of delivering.  Here is an extreme hi-fi example recorded from a Realistic TM-152 AM Stereo radio (popular in the 1980s) specially modified with the latest Third Generation C-Quam decoder chip from Motorola (the MC13028) and with the bandwidth-limiting ceramic filter bypassed:

http://rvcc2.raritanval.edu/ktek9053/cquam.mp3

If only all AM radio sounded this good.... however, even regular mono AM can sound excellent, given the right combination of transmitter, audio processing, and receiver.... such as in this case, 1070 WKMB in Stirling Country, NJ using a vintage Collins transmitter with homebrew "Rontimod" audio processing (teamed up with a Gates Statesman limiter), as received on an Optimus hi-fi AM mono radio:

http://rvcc2.raritanval.edu/ktek9053/wkmb/wkmbhifi.mp3

This is the type of sound that FM has been trying for decades to achieve:  loud and punchy, yet crisp and clean -- brought to you by a

250-watt AM daytimer.

Peter Ward (ptaak@yahoo.com) writes:

> Wow...this guy is either a prophet or he worked in radio recently. I'm one of those people (who still works in radio--part time) and HEAR this problem more and more! People in the business don't really understand how even digital audio can be degraded quickly no matter how good it initially sounds. And I hear the compression on air all the time!

I've been called a lot of things in my 18 years in this personal hell I call radio, but prophet is a first.  Really I'm flattred, and I don't know if I'm blushing or it's just warm in here.  I'm still here, Production Supervisor for a 5 station cluster, and I like it enough I think I'll stay a little while longer ... fighting the battle for better quality audio on the airwaves.

[ Moderator's Note: Maybe Peter is claiming that you are the product of some sort of automation system. I wouldn't be so quick to assume what he meant by "prophet." ;) ]

Tom Desmond <tdesmond@sprynet.com> wrote:

"Just curiosu -- where can one get a part 15 C-Quam transmitter, and how much does it cost?"

It's probably a C-QUAM broadcast exciter run barefoot.  Carver used one at some trade shows to demonstrate the TX-11a tuner (complete with a miniature free-standing tower and "CRVR" sign). Whether this actually meets Part 15 limits is an open question.

Let every state go its own way.

Which remembers me of the early days of TV when in Europe each country
had its own system. It is still confusing with France and the UK having
different (color) systems from Germany, Holland, Belgium etc.

<<People in the business don't really
understand how even digital audio can be degraded quickly no matter
how good it initially sounds.>>

One cause for poor quality is that commercial producers often obtain components for their productions (voice tracks, music tracks, SFX, etc) in the form of MP3s and then mix them into a finished production and them re-compress that spot into new MP3 to send out to the various stations. That's why I try to ascertain what is going to happen to the voiceovers I produce at home and send to clients. I prefer to send uncompressed files such as WAVs or AIFFs, especially if I know that the resulting spots will be distributed as MP3s. That way if my VO is going to get compressed it will happen only once and not until the end of the procedure. If a VO I do is going to be dropped directly into a TV spot or an A/V it isn't as much of an issue. But in any case, if the producer insists on getting his files in the form of MP3s it is not really up to me to argue with him about it.

Following up on my earlier report that the IBOC signal on WETA-FM
interfered with stereo reception of the Onkyo TX-8511 receiver, I'll
tell you my solution. I purchased a Panasonic SA-HE100 receiver
at the same price ($300) at the same store (Circuit City). The sound

quality is not quite as good, but more pleasant to my ears than
the Yamaha RX-496 that I also tried out. The FM tuner section
is very good, and isn't affected by the IBOX signal. It was
recently rated #1 (and a Best Buy) in Consumers Reports
among mid-price home entertainment receivers.

The specs aren't as good as on the Onkyo or
Yamaha--the rated thd is 0.9%, and the signal
consistency isn't given. But since I'm really interested
in how it sounds not how it measures on the bench,
I'll agree with Consumers Reports' blind testing of
the performance and say it's excellent. The only
negative I've seen so far is that it gets _very_ hot, with
only a small grill on the top and a temperature-controlled
fan in the back. The fan hasn't come on yet as far as
I know, s I don't know what its effect would be. All in all,
I'm happy with the distortion-free FM.

Wrong - Rich - You have this confused with the folding fishing reel
thing. You may be thinking of Cal Worthington and His dog spot - But
could also be thinking the 60's Mod Squad - though did not think Ron was
old enough yet. Could be a restaurant thing from returning troops
though, I doubt this.

Maybe it is one of the if I tell you I must kill you deals - so don't
tell me - OK

Don't think it impossible that automation systems won't be able to
talk to you sometime in the future and tell you what they really
think! You would probably hear things like "man, I play the same 20
songs ALL DAY" and "they make me work at 7 stations without an extra
hard drive" and finally after they get feelings and emotions "crush,
kill, destroy"!

The Denny's commercial for their new menu items is a perfect example of this.  It sounds like a really bad MP3.

Oh no! Not another "savior"! Like we need another after the Internet,
AM stereo and deregulation. Another savior will shoot out the last
tire at this rate.

France does, but the UK uses the same color system (PAL) as most of Europe.
The UK and Ireland do use a different sound carrier frequency.

> What pray tell is a "Rontimod"?

Here's the story...

Many AM and FM radio stations use an audio processor sold by Robert Orban, called the "Optimod".

However, many moons ago, Ronald Michels -- 1070 WKMB's engineer and son the station's late founder Herb Michels -- decided to make up an audio processor all by himself.  It still sits there today in WKMB's equipment rack, a simple metal box with a single unmarked knob on the front panel, and a single LED bargraph meter to show the audio level. Everything else is pre-configured by the circuitry.  Since he felt it actually provided better results than an Optimod, Ron decided to poke a little fun at Mr. Orban, and he called his home-brew processor the "Rontimod".

As a result, no other radio station in the country sounds like WKMB does.  Their audio is just something you have to experience in person -- preferably on a hi-fi "AMAX" radio.  The Rontimod's sound harkens back to the days when AM music stations were "loud" and "punchy", yet also "clean" and "detailed".  In comparison, the Optimod has rather muddy mid-range, and just sounds too "sterile".

Yes, the Rontimod does "pump" a little with a strong bass beat. But, we grew up with AM music stations sounding like that, and that "punchy" sound is actually beneficial on AM because it allows you to hear the "effect" of bass and percussion sounds that would otherwise be outside the audio range of a typical narrow-bandwidth AM receiver. In comparison, with an Optimod these parts of the music will simply *disappear* if your AM radio doesn't have a wide enough audio response to hear them directly.

Of course, the Rontimod also uses a healthy dose of pre-emphasis -- a.k.a. treble boost -- so if your AM radio has any degree of high frequency response, on WKMB you will hear the treble sounds more clearly than on any other station. But, it is still within reasonable limits, so on a true wide-bandwidth radio, WKMB will not sound too strident in the treble range.

All I could picture in my mind when the suits were talking about the displays on the new digital car radios were web page banner ads.

Internet presence has certainly bailed out broadcasting from its doldrums, hasn't it?

I recall that a certain New York City rhythm and blues and/or soul and/or jazz radio station uses a certain song to set up its hourly station ID - that songs is King Pleasure "Moody's Mood For Love" with the key lyric "there I go, there I go."

My recollection says it's WLIB. Does anyone know with any certainty which station this is?

thanks for any help.

Steve

I decided to do a test to see how much of an effect these LED light shave. There are a number of them near me, and I tested by putting on a 13 watt night signal from ~ 30 miles away and very prone to interference.  No interference was detected on any of the lights.  Go figure.  High tension wires blew the signal completely away.

Check out the broadcasting quality of "Eclectic Hits Radio." It has great recorded quality with its great hits of the 60s, 70s, 80s, and 90s. This along with the "Eclectic Buzz" and 'Tip of the Day' makes for great online listening. Log on the above URL, check it out, then spread it far & wide!!!! You'll be glad you did!!

Rick Martin of the 'Eclectic Buzz'
hays@city-net.com
http://www.toastmasters.org/ Great broadcasting communications ability improved through Toastmasters International.
http://www.1360wptt.com/  Same broadcasting/recording greatness with WPTT-AM 1360 'The Point.'

Amateur Radio Newsline™ Report 1317 – November 8, 2002

Amateur Radio Newsline report number 1317 with a release date of hFriday, November 8, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Some good numbers for ham radio here and across the seas.  The hobby is growing once again.  Find out the details on Amateur Radio Newsline report number 1317 coming your way right now.

(Billboard Cart Here)

**

RESTRUCTURING:  GOOD NUMBERS IN THE USA

The numbers are in and they speak for themselves.  Restructuring is finally having a very positive impact on ham radio growth here in the United States. Amateur Radio Newsline's David Black, KB4KCH, has the good word:

--

Last year at this time there were nearly 683,000 hams licensed by the FCC.  As of October this year, there are 2235 fewer--but numbers are not always what they seem.  The reality is that ham radio in the United States is growing once again.

First, the General and Extra class have increased substantially since the 13 and 20 word per minute Morse code exams were eliminated April 15th of 2000.  In fact, the number of people holding these licenses has increased by well over 25,000 for each license class.  And that's great news for ham radio equipment suppliers since they rely on higher dollar high frequency  transceiver sales for much of their yearly income.

The Technician class is holding its own, too.  The number of new Tech license holders is keeping pace with the number of hams either upgrading or dropping out of amateur radio.  The net change is close to zero.

Only the Novice and Advanced classes are seeing significant drops in numbers. No new Novice or Advanced class tickets have been issued since April, 2000. And while existing licenses can be modified and renewed, it appears as if that's just not happening among Novices.  They appear to be fading away, and quickly -- there were 65-thousand Novices in 1997 -- only about 37-thousand, though, today.

The bottom line is that for the last 12 months ham radio has seen an average of 16-hundred brand new ham licenses issued each month.  That's an improvement of 160 a month over the previous year.  And that improvement is very good news for ham radio.

As to the state with the largest number of hams?  It's still California which can now claim being home to more than one seventh of all the nations hams.

Latest figures show there are more than 100,000 hams now living in California.

The state with the fewest hams? North Dakota -- only 1575 hams there.

Reporting from the Amateur Radio Newsline's South-East Bureau in Birmingham, Alabama, I'm David Black, KB4KCH.
--

The bottom line is this.  Restructuring seems to be doing the job it was intended to do.  Its now up to those in the hobby to work to swell its ranks even more.  (W5YI)

**

RESTRUCTURING:  5000TH UK FOUNDATION LICENSE CELEBRATED

The United States is not the only place where ham radio is growing.  In the United Kingdom Andrew Finch, M3FMA, is only 11 years old and suffers from dyslexia.  But nothing was going to keep the young scout from becoming a ham. And now he is the 5000th person to obtain that nations new and very popular Foundation Class license.  Jeramy Boot, G4NJH, has more:

--
The Radiocommunications Agency has been so pleased with the numbers taking up the license, that it decided to commemorate the 5000th amateur with a special award. Alan Betts of the Agency's Amateur Radio section, commented:  "The radio amateur community was around 50,000 strong before the new license was introduced, and so this level of interest is very welcome".

He also added "The License has proved very popular with young people and amateur radio is very much an up-and-coming hobby for them".

The presentation of Andrew's prize took place at a ceremony held at the Radiocommunications Agency's monitoring station in Baldock, Hertfordshire on Tuesday the 22nd of October.  Andrew was also presented with membership of the Radio Society of Great Britain by its President, Bob Whelan, G3PJT, who also presented a host of radio amateur goodies and books.

Andrew's day was not over after the ceremony - he was given a tour of the Radiocommunications Agency monitoring station at Baldock. 'Heartbeat FM' from Hertfordshire then conducted an interview with him before he was whisked off for another interview with 'Dream FM' of Chelmsford.

Jeramy Boot, G4NJH.
--

Andrew had told his parents that he was going to begin saving his pocket money to buy a radio.  He won’t have to do that.  Among the gifts he received for becoming the 5000th Foundation license holder was a brand new F-T 817 transceiver donated by Yaesu.  The Foundation License has only been available to U-K residents since earlier this year.  (GB2RS)

**

## EMERGING TECHNOLOGY:  HAM RADIO INVITED TO DIGI RADIO EXPERIMENT

Ham radio has been asked to be a part of an important digital radio experiment. Bill Pasternak, WA6ITF, has the details:

--

Digital Radio Mondiale, or DRM, is a project aimed to revitalize the short-wave, medium-wave and long-wave AM radio broadcast bands.  This, by using digital signals to provide near-FM quality.

Radio amateurs and serious broadcast-band listeners have been invited to become part of the DRM Software Radio Project.  They may also be among the first to access the initial DRM programs when test transmissions begin next month.

James Briggs is the DRM Projects Co-ordinator with Merlin Communications in Dorset England.  Biggs says that the project relies on adding an extra down-converter board to existing receivers and then using software to decode the signal via a PC soundcard.

The interface is simple and the sound -- hopefully -- will be superb.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF.

--

To find out how you can play a part in the DRM experiment take your web browser to www.drmrx.org  (Media Network)

**

## RADIO LAW:  CONGRESS AND CCR’S

Some good news and some bad news in the drive by the ARRL to get Congress to ban deed restrictions on hams who want to put up towers and antennas.  The good news is that several more members of both houses have signed on as co-sponsors in recent weeks.  The bad news is that no action took place on the issue before Congress adjourned for elections and there’s little chance of any action once it returns to close out the year.  The bottom line:  The ARRL says that it will try again when Congress reconvenes in January of 2003.  (ARRL)

**

## ENFORCEMENT:  FCC PROBES JAMMING OF THE HURRICANE WATCH NET

The FCC is asking a Morrison Colorado ham to explain why he allegedly interfered with an onging hurricane emergency net.  The FCC's Daryl Duckworth, NN0W, tells us about the case:

--

Duckworth:  "The Enforcement Bureau opened an inquiry into allegations that Merle W. Garbe, W0SBE, of Morrison Colorado interfered with the Hurricane Watch Net on 14.325 MHz on October 3rd of 2002 during its Hurricane Isadore operation."

--

The FCC letter to Garbe notes that the Hurricane Watch Net is operated to assist the National Hurricane Center in Miami, other government agencies and people in a target area of a hurricane system.  The letter goes on to note that the agency considers this service to be one of the most important purposes of the Amateur  Radio Service .

**

## ENFORCEMENT:  NO RADIO CALL-IN SHOW PERMITTED ON 75 METERS

The FCC is asking a California ham why he allegedly ran a radio call in show on 3.830 MHz and requested shortwave listeners to participate.  The regulatory agency alleges that  James C. Watkins, KI6GU, of Burbank ran such an operation last August 16th and 24th and used a reverse autoptach system to facilitate the call-ins.

Along with the FCC inquiry Watkins was furnished 9 pages of material relating to the complaints against him.  He was given the customary 30 days from the date of the Commission inquiry to respond.  (FCC)

**

## ENFORCEMENT:  BIG FINE AGAINST FLORIDA PIRATE BROADCASTER

The FCC has levied a $10,000 fine against a Florida man who has allegedly been operating a radio transmitter without a license.  Richard Munoz of Naples was issued the forfeiture notice for operation of a radio station on 105.1 MHz without Commission authorization.  Amateur Radio Newsline's Bill Burnett, KT4SB, is in Miami with the details:

--

The story begins on April 20 if this year.  This, when agents from the Tampa Office investigate a complaint alleging that an unlicensed radio station was transmitting on frequency 105.1 MHz in the Naples, Florida area.

A search of Commission records shows that there was no FM radio station licensed on 105.1 MHz in Naples.  So, using a mobile direction finding vehicle, the agents trace the station to the Tree of Life Church in Naples.

The agents then interview several witnesses at the church who identify Richard

Muñoz as the operator of the radio station transmitting on 105.1 MHz. The witnesses also provide the agents a business card identifying Richard Muñoz as the pastor of a Spanish-language ministry called Mission Possible Ministries. A brochure advertises a radio program called “Mission Possible" on 105.1 MHz.

The agents interview Muñoz. He admits that his ministry owns the radio station equipment and is operating it.

The agents ask Muñoz if he had a license for the station. He replies that a friend has submitted an application to the FCC. Also that the friend has advised him that he could operate the station while the paperwork was being processed.

The agents advise Muñoz that he cannot operate the station without a license and directed him to terminate the unlicensed operation. Muñoz requested additional time to notify his listeners that the station had to go off the air. The agents again tell Muñoz that he could not operate the station without a license and order him to take the station off the air. Muñoz directs another person to turn off the transmitter.

But the story does not end there. On April 30th the FCC'sTampa Office receives another complaint alleging that an unlicensed FM station is again operating on 105.1 MHz in Naples. Also that it is causing interference to the reception of an FM broadcast station licensed to operate in that area.

On May 14th, agents again trace the station to the Tree of Life Church and on May 17th the Tampa Office issued a warning letter to Andrew dealing, the head pastor of the Tree of Life Church. The warning letter advises DeLong that operation of a radio station without a license violates Section 301 of the Act, ordered him to cease operation of the unlicensed station transmitting on 105.1 MHz immediately.

Then, on May 24, 2002, the Tampa Office receives a letter from Pastor DeLong. In the letter, DeLong states that Richard Muñoz is the operator of the radio station transmitting on 105.1 MHz. Also that that Muñoz leases space for the radio station from the Tree of Life Church, and that the Tree of Life Church had no control over the operations of the radio station.

Based on the facts before it, On June 5th the Tampa Office issues an Notice of Apparent Liability for a $10,000 forfeiture to Richard Muñoz for operating a radio station without a license in willful and repeated violation of Section 301 of the Act. In his response to the notice, Muñoz admits that he operated the unlicensed station on 105.1 MHz, but requests cancellation of the forfeiture. He tells the FCC that his church, Mission Possible Ministries, had agreed to purchase 50% of the radio station for $15,000 from Daniel Morisma approximately eight months earlier. According to the reports, Muñoz maintains that Morisma told him that there was an application for the radio station on file at the FCC and that the station could go on the air while they were waiting for the application to be processed.

According to Muñoz, Morisma told him that the station should go back on the air because the FCC would not visit again, and that if the FCC did visit again, it would issue a second warning before proceeding with any penalties. Muñoz asserts that the station had been using the time between the FCC’s first and second visit to explain to listeners that they would soon be off the air because they had been lied to and scammed and that the station was a week away

from dismantling when the FCC visited the station the second time.
But the FCC sees it another way. In its order the FCC says that it is unfortunate that Muñoz may have been duped into believing that there was an application for the radio station on file with the FCC and that he could put the station on the air while the application was being processed.
None-the-less says the FCC, Muñoz clearly knew following the inspection by its agents on April 20th that the station was unlicensed.
The bottom line. The FCC says that under these circumstances, it concludes that no reduction of the forfeiture on this basis is warranted.
>From Miami, I'm Bill Burnetrt, KT4SB, reporting for the Amateur Radio Newsline.
--
Muñoz was given the customary 30 days to pay the fine. If he fails to do so the FCC indicates that other punitive action may be taken.

**

WITH THE SCOUTS: JOTA FOLLOW-UP

ARRL Educational Programs Coordinator, Jean Wolfgang, WB3IOS, reports that so far over 125 scouting Jamoboree on the Air or JOTA survey have been received for this years event. The reports show over 9079 Scouts, 2855 visitors, and 657 hams participated. This is a substantial improvement over last year when only 65 surveys were returned!

But says Wolfgang, there are several state we have not heard from. They are Delaware, Hawaii, Idaho, Mississippi, Montana, Nebraska, North Dakota, South Dakota, Utah, Vermont, and Wyoming.

If you participated in JOTA 2002 and have not yet completed the ARRL survey please have a representative of your JOTA event complete and submit the form as soon as possible. You will find it on the web at http://www.arrl.org/FandES/ead/jotalog. (WB3IOS)

HAM RADIO BUSINESS: HAS HAMVENTION 2003 GOT A DEAL FOR YOU

The planners of Hamvention 2003 say -- have they got a deal for you! The Hamvention, in cooperation with the Dayton Montgomery Convention and Visitors Bureau has put together a special V-I-P package. It will do to five of the first 500 who purchase a preregistration ticket before Novermber 15th.

The five lucky winners will be chosen in a randon drawing in early December. They will receive two nights of hotel accommodations during Hamvention, dinner for two at Jay’s Restaurant, a V-I-P badge, a special souvenir package and the most important prize of all. An on-site V-I-P parking pass for the show!

Thats right -- parking almost at the Hara Arena front door.

More information on this special Hamvention 2003 promotion is available by e-mail to tickets@hamvention.org. You can also phone during business hours Eastern time to area code 937-276-6930. (Dayton Hamvention)

**

HAM RADIO BUSINESS: WORLDRADIO EDITOR DEPARTS FOR CAREER IN LAW ENFORCEMENT

One ham who may not be at Hamvention 2003 is Worldradio Magazine editor Rick McCusker, WF6O. This is because McCusker has announced that he is leaving the post in a major career change.

Accordong to McCusker, he has been in training for some time to become a peace officer. He has also been working as a Reserve Depuity Sheriff in his spare time. Now, he has accepted a full time position with the Sacramento California County Sheriff’s Department.

Duruing his tenure at Worldradio, McCusker completely redesigned and modernized the magazine’s look. He took most columns by-monthly permitting the addition of new writers representing emerging technologies in the hobby. His legacy is a well respected publication with a steadilly growing reader base.

McCusker’s last day at Worldradio will be on Wednesday November 13th. At airtime no replacement editor has been named. (ARNewsline™)

**

THE CHANGING OF THE GUARD: KL7Y LOST IN MOTORCYCLE ACCIDENT

Some sad news. Word that famed contest operator Daniel Robbins, KL7Y, of Wassilia Alaska has died in a motorcycle accident while in Hawaii. According to the Honolulu Star Bulletin, the 54 year old Robbins died Thursday October 31st after he lost control of a motorcycle while riding in Kona and drove into a lava field. The Fire Department said that Robbins, who was not wearing a helmet, suffered head and other injuries.

KL7Y was a friend to many inside and outside of the world of ham radio contest operations. He had just completed operating the CQ World Wide SSB contest from KH7R a few days before the accident that took his life. A memorial guest list for his friends to pay their respects has been set up on line at www.contesting.com. (K7JA, contesting.com)

**

ON THE AIR: THE MIGHTY MO CELEBRATES VETERANS DAY

The “Mighty Mo” is coming to the ham radio airwaves for a very special event. Bob Maguire, KA2WXU, reports over the Internet that on November 9, 10, and 11 the Battleship Missouri Amateur Radio Club will be on the air each day from 17:00 to 04:00 U-T-C on 14.263, 21.363 and 28.363MHZ, in honor of Veteran's Day weekend. There is no special event QSL card for Veteran's Day event but if you Q-S-L via KH6BB you will receive a regular Mighty Mo QSL in return. More information is on the web at www.kh6bb.org. (KA2WXU)

**

## ON THE AIR: UARC CELEBRATES 75TH ANNIVERSARY

The Utah amateur Radio Club will celebrate its 75th anniversary with an on-the-air event beginning Saturday November 9th and continuing through November 10th. Operation will be on most high frequency bands with emphasis on 20 meter SSB. The call sign to listen for is W7SP. For a special commemorative card, QSL as directed on the air. (N7HVF)

**

## INTERNATIONAL – INDIA: PIRATES PERSIST

The president of the Amateur Radio Society of India, reports a significant number of pirate operations using call signs VU4A, VU7A and similar other call signs continues. VU2SDN says that a blanket ban exists on operations from Andaman, Nicobar and Lakshadweep islands, and that VU4 and VU7-prefix call signs have not being assigned for 10 years. The only exception was the brief 1993 VU2JPS operation from the Andaman Islands. Quoted in the ARRL Letter, VU2SDN says that call signs that begin with VU2 followed by two or three letters or with VU3 followed by three letters are the only valid call signs for India. (ARRL)

**

## INTERNATIONAL – USSR: A WALL OF SOUND

Radio Liberty's broadcasts to the Union of Soviet Socialist Republics were the target of Soviet noise jamming for several decades. But Media Network reveals that the Russian operators actually left frequencies undisturbed so their friends could hear the programs. Now, you can too with a 30 second audio sample of what jamming sounded like for those of you too young to remember. Its on the Radio Netherlannds website. The URL is http://www.rnw.nl/realradio/features/html/jamming021018.html (Media Network)

**

## DX

In D-X, a surprise U-S to Japan long path opening surprised many South-West region hams the morning of October 31st. At about 15:45 UTC, D44TD was worked as far west as Arizona. while N6XQ was reported to be 599+ into JA-land, Unfortunately for many U-S hams the surprise opening took place while they were away at work and preceeded an X-class flare a bit later in the day. (K7JA)

**

## THAT FINAL ITEM: SOLVING AN AGE OLD QUESTION

For nearly a century, mathematicians have been stumped by one of the math world's most difficult problems. This is a conjecture by French scientist Henri Poincare about the properties of three-dimensional space. And now, it appears as id a British math whiz claims to have solved the problem. Amateur Radio Newslines Henry Feinberg, K2SSQ, has the puzzeling story:

--

Jules Henri Poincare was dubbed by E.T. Bell as the "Last Universalist. A man a who was at ease in all branches of mathematics.

Poincare was also a 19th century professor of astronomy who made fundamental contributions regarding the motions of the planets. He went on to found the field of topology, a branch of geometry, and even competed with Albert Einstein in the study of relativity.

Before Poincare, mathematicians fully understood two-dimensional space, such as the Earth's surface, and could list all the possible shapes of two-dimensional surfaces and use mathematical calculations to distinguish between them. But The math mystery Poincare raised regarded the properties of three-dimensional space. His question, or conjecture, was whether the two-dimensional calculations could be easily modified to answer similar questions about three-dimensional spaces.

He was pretty sure the answer was yes but couldn't prove it mathematically. Nearly 100 years later, math whizzes remain stuck, except for one. His name is Martin Dunwoody.

Dunwoody is described as a British mathematics expert. His answer is barely six pages long and only an outline. And as you might expect, Dunwoody's solution - complete with formulas and diagrams - has been praised and challenged in England.

No, we will not try to explain all the math here. What is interesting is the reaction of the scientific community. Professor Ian Stewart of the University of Warwick, one of Britain's most respected mathematicians calls it the first good shot at this problem in years,. But Colin Rourke, another University of Warwick mathematician, disagreed. Rourke says that when he raised a problem in the solution, Dunwoody admitted on his Web site that it could be difficult to overcome.

Once the math community has accepted the solution, the Clay Mathematics Institute in Cambridge, Mass., must conduct its own review. Only if that proves successful will Dunwoody be rewarded. And if the reaction of the British math professors is any indication, this conrriversy could rage on in math circles for years.

Adding it all up for the Amateur Radio Newsline, I’m Henry Feinberg, K2SSQ.

--

Even if Dunwoody continues to refine his answer and eventually is proven correct, it could be a long time before it's official. First, he must get it published in a mathematics journal, then undergo a two-year waiting period of international review. (Science Today)

Those of you who think you've heard Bob Trout of CBS announcing the Japanese surrender should check out trout.mp3 on this page. The version most often heard is one that was re-created by Trout for the Edward R. Murrow "I Can Hear It Now" album in the late 1940s, but the much rarer clip Jeff has is the real deal, complete with a feed from London that went sour and some cheering in the newsroom that some journalistic purists may find inappropriate. (My guess is that this was why Fred Friendly had Trout record a cleaned-up version for the album.)

Hello radio fans. I hope my question is not considered off-topic or stupid.
I grew up in LA listening to the radio. The am band of the 50s, 60, and 70s fascinated me. When I started driving in the 70s, I found myself listening to the stations like KNX,KFWB,KMPC, KABC,andKFI, which had reliable people on the road and in the air who gave road and traffic reports for those of us stuck on the 5   405   15  10  210 and other congested freeways, advice and alternate routes.
A big traffic tie-up was called a   sig-alert. I heard this on the radio, and knew what it meant. I heard it TV when I finally got home, on ch 2  4  5  7  9 and  11. Even on B&W tv on pioneer tv station in LA in the 50s,  KTLA ch5. I thought I always knew what  "Sig-alert" meant,, until the other day, when a Latino friend and co-worker, who knows I am a fanatic and fan of word origins, asked me about it.
I was clueless! Can any of you great radio fans out there give me story of the origin of the term?
Thank you, Rod Heathcote

Emma Clarke has launched a new website which sells her own voice clips. You can now download generic station branding packages by logging onto www.emmaclarke.com/firedair. All voice clips are also available to download individually. Emma Clarke is one of the UK's leading female voiceovers and can be heard as the "mind the gap" voice on the London Underground.

Irwin X <irwin-shapiro@rcn.com> wrote:
> IBOC is 20khz wide

Nope... in its latest form, which is currently being used on the air, the "hybrid" analog/digital IBOC signal takes up a total of 30 kHz RF bandwidth -- 15 kHz in either direction from the carrier. Thus, the signal an IBOC station on 710 kHz will not only spill over to 700 and 720 kHz, it will also affect the reception of any stations on 690 and 730 kHz with its extended digital sidebands!

In comparison, for the past decade or so, North American AM stations have limited their RF bandwidth to a total of 20 kHz, which equals a maximum audio response of 10 kHz. This was chosen as the ideal compromise between audio fidelity and occupied RF bandwidth. There is still some overlap between channels, but it rarely occurs to the level that reception of a local AM station would be unacceptably degraded -- unlike IBOC, where even stations 30 kHz apart from each other (such as one on 710 kHz and another on 740 kHz) would have overlapping signals, which would make IBOC digital-mode reception of either station difficult to impossible, and would seriously degrade analog reception as well.

IBOC on the FM band has similar issues; stations using IBOC will also overlap onto adjacent frequencies, with a hissing or buzzing noise heard from the digital sidebands. 102.7 WNEW in New York City tested IBOC for a while, and it caused a strong buzzing noise to be heard on 102.5 and 102.9 MHz, even to the point where nearby stations on these frequencies complained to the FCC about how it negatively affected their signal coverage.

I agree... most of the agency spots we get today are through various agency distribution sites, the most notable being Spot-Taxi/FastChannel.
All of the audio is in mp3 format with fairly low sampling rates... Our production rooms each have 1 Otari Reel-2-Reel machine, and no cart machines.  We have Roland digital editors, but most in-house production is done using Cool Edit Pro... In fact only 1 person (the production director)

uses the Rollands.... everyone else uses Cool Edit Pro.
Who would have ever thought that a production room would be virtually
tapeless.  Production/distribution sure has changed in the past 10 years...

It's no good and it isn't going to happen. It might even be illegal,
especially when stations get together the coordinate what they play.

Yes, there's a wealth of music in the public domain. Most of it is
Classical and doesn't quite fit contemporary, or even oldies, formats.
Remember, Public Domain means old. It means it's been around for so
long that it's fair game for anyone. I don't know many stations that
specialize in music  from the turn of the century, even though the
recording quality is perfect for most MP3 uses.

Here's are some of the Public Domain rules according to the University
of North Carolina:

Created after 1/1/78 - Life + 70 years from the death of the longest
living author.

Published between 1923 -  1963 - 28 years + a 28 year renewal.
Recently extended (if renewed) to allow 67 years of protection.

Most other publications are either 67 years or life + 70 years.

The only works not protected are those published before 1923.

You have a long time to wait before current music becomes public
domain. You have an even longer time to wait before WPLJ or WHTZ
begins to play it.

Rich

>supported tower.

>I don't know if this is still accurate but the last I heard was that the
>tallest antenna towers in the US were a 2,063 foot TV tower and a 2,060
>foot FM tower both of which were located in ND. I believe there was also
>one or more over 2,000 feet located in TX.

Correct.  The two tallest are in North Dakota and a third tower over

2000 feet is the KLDE tower in Lake Jackson, TX.

>I have read several times that the FAA has placed a maximum limit on
>antenna tower height. Does anyone know where this regulation is
>published? I would like to read it.

There is no absolute limit on tower height, but the FCC and FAA have established a "rebuttable presumption" that any tower over 2000 feet is a hazard to air navigation, and an applicant must show a compelling need, as well as show that the air navigation hazard is minimal or can be mitigated. See:

http://www.natehome.com/TowerTimes/NewsDetail621.cfm?Id=35,541

This is why many towers are at exactly 1999 or 2000 feet. The skyscraperpage.com site erroneously lists some as 2001 feet, but I believe that this is due to rounding error in conversion, as they default to height in meters.

To make visual comparisons of the heights of man-made structures, including communications towers, go to:

http://www.skyscraperpage.com/diagrams/display.php

and:

- Go to the bottom of this page

- select the "ft" radio button to get height in feet

- select "pinnacle" radio box under "heights"

- multiple select (Ctrl button and left button mouse click) "Comm.", "Observation", and "Office" under "Type"

- select "Built" under "Status"

(make sure that you first de-select "Default" on both lists first)

- press the "Get Diagram" button.

This will show you architectural drawings of the tallest communications towers in the world and some of the tallest skyscraper towers in the world, to the same scale, in a "police lineup" view against a background marked with height lines.

I would imagine that anything that does not have national interest would not be covered by either service. They don't have the channel space. You might try a regular radio for sports.

> Also are they working on a boom box version?

I sincerely doubt that either will come up with a "boom box" before they fold.

Amateur Radio Newsline™ #1315 - October 25 2002

Amateur Radio Newsline™ report number 1315 with a release date of Friday, October 25 to follow in 5-4-3-2-1.

The following is a Q-S-T.  A ham radio operator may have played a part in the apprehension of the DC sniper suspects, the U-K says no more new operators in its 5 megs experiment and the ARRL says no to unlicensed visitors sharing a United States ham radio band.  These stories are first on Amateur Radio Newsline report number 1315 coming your way right now.

**

RESCUE RADIO:  HAM RADIO HELPS NAB THE DC SNIPER SUSPECTS

A ham radio operators may have played a role in the apprehension of two men wanted in connection with the sniper shootings in the Washington DC area.  ABC News interviewed the trucker who called the police to report he had spotted the two suspects.  When asked how he heard about the description of the vehicle, his response was that he heard it while listening to Bozo on WLW radio

Now, Chip Margelli, K7JA tell amateur Radio Newsline that Bozo in real life is Dale Sommers; callsign WB6OM.  Sommers hosts a very popular late night trucker's show on the 700 Kilohertz clear channel station.  His show is mainly music and information of interest to long-haul truck drivers.  The description of the wanted men was just that. As a result the pair are in custody thanks to a trucker who was paying attention to what WB6OM had to say as “Truckin Bozo” over WLW in Cincinnati. (K7JA)

**

INTERNATIONAL: NEW PERMITS FOR THE UK 5 MHZ EXPERIMENT GOING ON HOLD

What happens when a propagation experiment gets a bit to popular? If you are a telecommunications regulator in the United Kingdom you might be inclined to temporarily suspended issuing further permits for hams to take part. And that’s what’s about to happen in regard to the United Kingdom’s 5 Megs experiment. From Nottingham England, here’s Jeramy Boot, G4NJH:

--

The Radiocommunications Agency says that applications for 5-MHz band experimental Notices of Variation or NoV’s have far exceeded their expectations. The R.A. now considers that the risk of congestion on the five spot frequencies allocated may be detrimental to the overall success of the experiment.

Accordingly, the RA has decided not to issue any further NoV’s for applications received after the 31st of October. The position will be kept under review and occupancy monitoring of the frequencies will be carried out. It is hoped that ollowing this exercise - more NoV’s could be issued, or a numerical limit to the number of NoVs can be set based on usage and congestion. It is likely that an announcement can be made later this year for action early in the new year.

Jeramy Boot, G4NJH.

--

The United Kingdom 5 MHz experimental band was made available to that nations individual Full Class A hams by means of a Notice of Variation issued last July. The five 3kHz-wide frequency allocations are permitted for the purposes of antenna and propagation experiments. The Radio Society of Great Britain is in charge of the overall management of the project. (RSGB)

**

INTERNATIONAL: AN IARU UPDATE FROM PRESIDENT LARRY PRICE W4RA

Still in the international arena, we have a follow up to last weeks story on the International Amateur Radio Union. With it, here’s our producer Bill Pasternak, WA6ITF:

--

We received a very nice note from International Amateur Radio Union President Larry Price, W4RA, following last weeks story about the recent meeting in Morocco. According to President Price, the news isn't the IARU observer status at Plenipotentiary Conferences. He tells Newsline that IARU has had this status since the 1998 Conference in Minneapolis. At that time the International Telecommunications Union Convention rules were modified to give the same privileges at Plenipotentiary Conferences as IARU already had at Radio Conferences.

President Price says that the real news was the special station, CN8UIT set up at the conference center in Marrakech. He says that this was a follow on from a similar station set up by the ARRL in Minneapolis and one eight years ago in Kyoto, Japan from the JARL.

Buy the way, the CN8UIT call is based on the French pronunciation of the International Telecommunications Union. For those of you unaware, the International Amateur Radio Union was founded in 1925 specifically to represent our service at international conferences. It has done so -- with great success -- ever since.

With a thank-you to IARU President Larry Price, W4RA, for that neat note, I’m Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.
--

In his note to us President Price says that the IARU has taken part in every major conference in modern years. Also that it will be there for all of us at WRC 2003 in Geneva Switzerland. (ARNewsline™)

**

INTERNATIONAL: ARRL ASKS FCC TO DENY US USE OF EUROPEAN/UK FRS-TYPE RADIOS ON 70 cm

The ARRL is saying no to visitors using unlicensed radios in our ham bands. Amateur Radio Newsline’s Bruce Tennant, K6PZW, has more:

--
The ARRL has asked the FCC to deny a petition that would set aside spectrum in the 70-cm ham band for non ham use. This, for use by visitors from Europe and the United Kingdom to use their Personal Mobile Radio transceivers while in the U-S.

According to the ARRL Letter, the request was filed by Dr. Michael Trahos, KB4PGC of Alexandria Virginia. It asks that European PMR 446 type handie-talkies be allowed to operate license free while overseas travelers were in United States jurisdiction. PMR 446 hand-helds are similar to the US Family Radio Service transceivers but operate on eight channels between 446.0 and 446 .1 MHz. at up to a half watt out.

In his Petition, Trahos said that existing Part 97 Amateur Service rules precluding the use of PMR 446 radios in the US were essentially unenforceable and that granting his petition would have minimal impact on existing amateur operations. The ARRL countered by saying that there are obvious enforcement problems associated with the Petition. It says that putting the unlicensed users on a ham band is a formula for serious interference problems to be created.

For the Amateur Radio Newsline, Im Bruce Tennant, K6PZW, in Los Angeles.

--

As an alternative, the ARRL recommends that European and UK visitors simply purchase inexpensive FRS transceivers to use during visits to the United States.  (ARRL)

### RADIO LAW:  FCC REJECTS AMATEUR'S PETITION FOR RECONSIDERATION ON CC&R ISSUE

The FCC has turned down a Petition for Reconsideration filed by a Florida amateur.  This, of the Commission's 2001 decision to deny the ARRL's Application for Review in RM-8763.  That proceeding concerned the League's effort to have the Commission include privately imposed deed restrictions under PRB-1.

The ARRL says that the FCC dismissed its Application for Review last December 18th.  At that time the FCC noted that PRB-1 more than adequately protects federal interest in promoting amateur communications from overly restrictive regulations.

Not long after, W. Lee McVey, W6EM, of Bradenton, Florida, filed his own Petition for Reconsideration Mc Vey claimed that it presented additional evidence that the FCC had not considered in dealing with the ARRL's petition. But the FCC disagreed.  It says that McVey offered up no new evidence in the matter and has turned his petition away.  (ARRL)

**

### ENFORCEMENT:  INDONESIA PIRATE UPDATE

An update now to our recent story on the problems being caused by pirate stations in Indonesia.  Not only are they making life difficult for hams around the world.  The pirates are also playing havoc with domestic Indonesian ham radio communications as well.  With more, heres Q-News Graham Kemp, VK4BB:

--

Many reports covering Indonesian non amateurs using our frequencies in the 40, 20 and 10 metre bands are making their way to the IARUMS.   There seems absolutely no control over their working and existence by the  local

Government.

It is very difficult for licensed Indonesian amateurs to find a clear frequency in the lower edges of 40mb for their authorised cmmunications. Generally the licensed Indonesians are around 7050,7055 and 7060 kHz for their traffic. 7050 kHz frequency, carries CW lessons for the intending future amateurs. Otherwise, the licensed ones, operate in their own nets and you can clearly identify their call signs in between, as per standard practice, though the entire conversations are in Indonesian.

Another frequency regularly used by a SE Asian group for two-way non amateur communications is 14044 J3Eu mode around 0100 UTC every day. IARUMS need the services of those knowing SE Asian languages to identify them, they may be from XV, 3W or XU area.
--

If you are a resident of South-East Asia and heating this newscast, you are requested to watch 14.044 MHz and help identify the unlicensed users. Please send that information to your nations Intruder Watch Coordinator as fast as you can. (Q-News)

**

## ENFORCEMENT: PIRATE BOARDCASTING IN SAN DIEGO CA

Back here in the U-S-A, Bob Gonsett’s CGC Communicator reports on an entity calling itself Free Radio San Diego which announced plans to begin broadcasting on on 96.9 MHz.. The transmitter location and parameters are unknown but one person reports being in the town of Carlsbad California and seeing a spray-painted stenciled sign on the concrete walkway promoting Free Radio 96.9. Also, the operator of the station does have a web site at www.pirate969.org What action the FCC may be planning on this one is unknown. (CGC Communicator)

**

## ENFORCEMENT: BE CAREFUL ON 146.52

The has FCC issued and then retracted advisory notices to five Mid-West hams telling them that they were talking to long. This, on the national calling frequency of 146.52 MHz.

The letters said -- and we quote: “The frequency 146.52 MHz is customarily used, and is called for under the band plan, as a simplex calling frequency for Two Meter operation. Numerous communications from your station during the above dates have lasted from nearly half an hour to an hour. While band plans are not mandatory under the Commission’s rules, the Commission depends upon them to minimize the situations in which Commission intervention is required, and they comport with good Amateur practice under our rules. Please review Section 97.101 of the Commission’s rules” -- end quote.

The FCC origionally said that the October 16th letters went out following a review of complaints about the operation of their Amateur stations between

September 19th and October 6th.  The retraction was issued on Wednesday October 23rd.  No reason was given for the withdrawal.  (FCC)

**

ENFORCEMENT:  FCC JUDGE FAVORS SCHOENBOHM'S RETURN TO AMATEUR RADIO

The ARRL reports that an FCC Administrative Law Judge believes the regulatory agency should permit Herbert L. Sahoenbohm to once again hold an Amateur service license.  In rendering his decision, Judge Arthur I. Steinberg says that he believes Schoenbohm now appears to hold the requisite character qualifications to be a Commission licensee.

The FCC had designated Schoenbohm's license renewal application for a public hearing.  This based on character issues stemming from a 1992 conviction and alleged lack of candor during subsequent FCC hearings on the matter.  The former KV4FZ lost his bid to renew his ham ticket in 2000.  He applied for a new license in 2001 which lead to the recent recommendation by Judge Steinberg.  A final decision on whether or not to re-license Schoenbohm now must be made by the FCC itself.  Schoenbohm has also passed an Extra class exam that is also pending.  (ARRL, FCC)

**

THE INTERNET:  DENIAL OF SERVICE ATTACK THWARTED

What investigators are calling a sophisticated and large-scale assault against the World Wide Web has been thwarted .  But not before nine of the thirteen servers that manage global Internet traffic were crippled for a short time  on Monday October 21st.

The FBI's National Infrastructure Protection Center said that it was aware of the denial of service attack and is addressing this matter. Service was quickly restored after managers put defensive measure in place bringing the attack to a halt.  Most Internet users did not even notice the hour long attack whose origin is still not known.  (WebNews)

**

ON THE WEB:  TECH NOTES GOES HIGH TECH

You have hears us credit it here on Amateur Radio Newsline.  Now, Larry Bloomfield's broadcast industry publication Tech-Notes is available on the World Wide Web in a new easy-to-read format.  Larry has adopted HTML scripting which permits him to publish pictures, logos and diagrams.  And you will always have lots about digital and high definition television and much more.  You can check it out on-line at www.Tech-Notes.TV.  (Tech-Notes, CGC)

**

NAMES IN THE NEWS:  PAUL BLUMHARDT, K5RT, JOINS CQ STAFF

Paul Blumhardt, K5RT, has joined the staff of CQ Communications, Inc. as

Director of New Business Development. Blumhardt, of Rowlett, Texas, will oversee efforts to broaden the base and the scope of the company's marketing activities.

According to publisher Dick Ross, K2MGA, Blumhardt has actually been part of the CQ "family" for the past three years, serving in a volunteer capacity as Worked All Zones Award Manager. Blunhardt holds an Extra Class amateur license, a commercial FCC General Radio Operator License and degrees in both engineering and business. Among his personal operating achievements are 5-Band Worked All Zones, 5-Band DXCC, 6-Band Worked All States, and #1 DXCC Honor Roll.

As all of you are aware, CQ Communicatoins publishes magazines, books, videos and other materials for the amateur radio and hobby radio fields. They are also a co-corporate underwriter of the annual Young Ham of he Year Award. (CQ)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

(5 sec pause)

**

THE WAR ON TERROR: A BANNER AND A LINK

Pieter Wycoff, KG4UPX, says over the Internet that he has found an important tool that every concerned ham should have on his or her personal website. Wycoff says that the Homeland Security Knowledge Database has a banner that can be posted to any website notifying visitors of the current status of alert to terrorist threats.

The site also contains lots of other information relevant to homeland security and how you can play a part. You can even sign up to receive threat notification updates by e-mail. To learn more on how you can add this feature to your ham radio website, take your web browser to http://www.twotigersonline.com/resources.html.

And for those not aware, right now the nation is under color code Yellow which indicates an elevated level of alert. (Via Internet)

**

CONVENTIONS/HAMFESTS/CONFERENCES: AMSAT IN FT. WORTH IN NOVEMBER

The 20th annual AMSAT Symposium will be held November 8th to the 10th in Fort Worth, TX. The gathering actually kicks off with an Early Arrival Activity on November 7th and ends with the conclusion of the Board of Director's Meeting on the 11th. More information is in cyberspace www.amsat.org. (ANS)

**

## SATELLITE NEWS:  FCC DECLINES TO APPROVE ECHOSTAR-DIRECTV MERGER

The FCC has declined to approve the transfer of licenses from EchoStar Communications Corporation and the Hughes Electronics Corp. subsidiary DirecTV to form a new business entity.  The FCC said that the companies did not demonstrated that approval of the transaction will serve the public interest,convenience, and necessity.  The complete story is on the web at www.fcc.gov/Daily_Releases/Daily_Business/2002/db1010/DOC-227263A1.doc  (CGC)

**

## HAM RADIO IN SPACE:  SOYUZ ACCIDENT SOLVED

A Russian state commission has set October 30th as the launch date for a Soyuz rocket carrying a three-person crew to the International Space Station.  The decision was made after investigators determined that it was a probably a production glitch rather than faulty design which led to the October 15th crash of a similar launch vehicle.

For a while, it appeared that ham radio operations and everything else on the International Space Station might come to a grinding halt.  Russia had threatened to suspend resupply launces following the mishap with the unmanned Soyuz ship which exploded seconds after liftoff, killing one person on the ground and injuring 20 others.

Such a delay would have had a devastating effect of future habitation of the space station.  This is because the current emergency evacuation lifeboat vehicle is fast approaching the date on which it must be replaced.  Only a Soyuz launcher can carry the replacement lifeboat to the ISS.  If the Soyuz launchers had been kept on the ground, operations on the ISS might have been suspended.  Thankfully, that wont be the case.   (Published news reports)

**

## INTERNATIONAL - RUSSIA:  HELP LETTER MAY BE PHONY

A electronic letter purportedly from a Russian ham asking for financial assistance may be a phony.  Then again, maybe not.

The letter showed up in hams mail boxes and on the numerous Internet news groups beginning on October 18th.  Signed by a person calling himself Valentin, the note asks for donations of money and other gear.  What has made many suspicious is that the writer never gives his call sign and does not use any ham radio terminology.

A number of people believe that the letter was actually sent by a spam-mail generating company or someone with a program that harvests e-mail addresses from the World Wide Web and generates automatic e-mail to them.  There is even some speculation that the message did not come from Russia as the note itself claims.

Then comes a posting to the QCWA remailer from Lee Manning AK7T. Manning says that he e-mailed the writer of the message. Valentin replied that his callsign is RA3XAA. According to international call sign listings, RA3XAA belongs to Valentin Mikhaylin in Kaluga Russia. We have e-mailed him and are waiting to find out if he is the person who issued the letter and how he was able to get so many e-mail addresses of United States hams.

Meantime you might want to keep in mind two words. Caviat Emptor. Buyer -- or in this case -- giver beware. (QCWA Remailer, others)

INTERNATIONAL - THE NETHERLANDS: AUCTIONS NOT MANDATORY

Media Network says that a judge in Rotterdam has ruled that the next Dutch government will not be required to auction the commercial radio frequencies to the highest bidders. The ruling on Friday October 11th will impact on future spectrum auctions in that nation. (Media Network)

**

DX

In DX, GB2EVR is a new permanent special event operation for the Eden Valley Railway in the U-K. The station is located at the Warcop railway station, six miles east of Appleby-in-Westmorland, Cumbria. (GB2RS)

Also, JA2ZL will be active as F0/JA2ZL from Morea Island in French Polynesia from the 30th of October to 2nd of November. He plans to operate on 40 to 10 meters mainly SSB, with some CW and RTTY. (GB2RS)

And a milliwatt Beacon is on the air on 11 meters from Northern California. AOH is at the top of a very high mountain and operates under FCC rules part 15. This is the same as child walkie-talkie and can be heard on 27.125 MHz. The Beacon is on the air trying to make a point you don't need 20 kilowatts to DX. If you hear it, QSL to aoh@ computermail.net (APC News)

THAT FINAL ITEM: INNOVATION IN AMATEUR RADIO REWARDED

And finally this week, a big honor for a deserving ham. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, has the details:

--

Brad Phillips ZS5BP has been rewarded for his innovation in Amateur Radio. This by being named to receive the South African Radio Amateur of the Year Award.

Phillips received the honor for his work in introducing the Internet Repeater Linking Project – or IRLP to that nation. South Africa Radio League

President Sid Tyler congratulated Phillips on his achievements saying that IRLP is as much part of amateur radio as is HF.

But that’s not all. The award itself says that IRLP offers new opportunities for the development of the amateur radio service in South Africa. This is because it brings amateur radio within the reach of young people in schools and the older generation who, after retirement, often do not have access to High Frequency stations or other ham gear of their own. Phillips work brings ham radio to both.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

The South African Radio Amateur of the Year Award is sponsored by Siemens. Its given annually by the South African Amateur Radio Development Trust to a ham radio operator who has made a major contribution to the Amateur service. (SARL)

I think you're dead on with that one.  The only hope HD-FM would have is to
be IBAC (In-band adjacent channel or in-band alternative channel).  However,
many areas of the country don't have the space to give every FM broadcaster
a second channel for digital (unlike DTV).  The only hope at that point is
place as many stations as possible.  After listening to the WOR-HD (AM)
signal, AM is in the same boat - except they need full digital just to sound
better than AM analog.

I'll take a stab at this, right or wrong.

The Traffic Light LED's are probably run from a high voltage DC that is switched on and off rapidly (in the kHz range) to give a high intensity yet stay within the "average forward current" range of the LED. SInce the pulses are square waves (OK, probably not 50% duty cycle, but the switching times are probably in the nanosecond range), they are generating (and radiating) EMI up into the MHz spectrum. Truck and Car and Bus (etc, etc) are running off of lower voltages, and likely are running pure DC (with internal dropping resistors to keep the forward voltage drop in spec). No noise that way.

As the one who tested the very first prototype of the 8000 (wirewrap in
a moduline box) on the air, I can tell you that if you try to push the
8000 into what is today considered "competitive" sound, it will sound
dreadful. Such is the nature of single-band processing. The 8000 was
designed to do one thing: accurately control modulation. And that's all
it does.

> We also have some Urei Eq's and two  Behringer processors, an Ultradyne 9024

> in the air chain?
```

That would be something you would have to experiment with to see if it does what you want. You are not going to get what a modern DSP-based processor will deliver (and you refuse to consider an 8200 or an 8400), but you might be able to improve on a barefoot 8000.

Check out http://www.live365.com/stations/radiodc/

This is "Eclectic Hits Radio," an excellent array of hits from the 1960s, 1970s, 1980s, and 1990s. It will provide a unique regular Internet listening stop for your busy lives. This will be a top notch web site to visit. Also, they provide great music plus informative tidbits to help you stay positive for success in our competitive global economy. Give this a listen and spread the word. You'll be glad you did!!!!!!

> As for buying a better radio, I'll have to take that up with Ford/Bose (I have their "premium" system - complete with AM stereo - in my 2001 Ford F150).

Does your radio have a "local" setting? Many car FM radios have a switch to cut sensitivity, specifically to combat this sort of problem when near one or more high-powered transmitters (or when getting lots of multi-path when driving inside a city with lots of tall buildings).

The exciter with the magnetic amplifier is the was the BTE-1C, while the exciter in the transmitter for auction has the BTE-1B exciter.  Can't you kill any spurs simply by switching off the AFC?

I have to laugh at this argument guys..I AM a production director and I
recieve commercials from DGS, Spot Taxi/Fast Channel and ftp sites and email
and a few still on reel. The only complaints I ever get from anybody about
sound quality is when i get a commercial on reel with all of it's hiss and
muddy sound. Listeners want to hear clean/clear sound..their dont worry
about bit rates. this is truely a geek issue....hehehe, just sit back and
listen and have fun guys!

Yes, I see that now. Indeed, the spurs in the BTE-1C are produced by the
AFC, but turning it off presents other, more obvious problems. :-)
Except for the battle to keep the noise floor down on the 1B, it was a
pretty innocuous beast. The only grief I got from the 1B was from an FCC
inspector who insisted that the normal AFC wobble was in violation of
the rules. Since he couldn't find the "rule" it violated, it became a
verbal advisory.

BTW, I got an FCC advisory on the 1C spur once. That's how I found out
about it.

The exciter with the magnetic amplifier didn't have a mini-crt.  The two
models before the one with the magnetic amplifier had mini-crts.  The
later of the two models with the mini-crt, had a PLL that locked onto the
crystal frequency with no frequency offset or error beyond that of the
crystal itself.  Of course there was always the possibility that the PLL
could go out of lock.

just to be picky, Fastchannel uses MP2 ...

In my market (Ottawa Canada), our major competitor moved into their new building, and eliminated tape except for client cassettes. We still have reels, but they are used for deck space and on rare occasion for taking long form off satellite. We roll a tape machine into on-air studios as needed. Here, tape gets used as often as turntables.

The difference that I'm having a hard time getting used to is not lack of tape. That was easy, and besides I don't have to empty the trash bin twice a day or keep bandaids around for tape cuts. What's different for me is the lack of a console. Most of our studios use little Mackie notepad mixers to feed stuff into the Cool Edit computers. All you have in your working position is a keyboard, mouse, monitor, and this little mixer off to the side. It takes a while to adapt to mixing with a mouse instead of a handfull of faders.

Oh, THAT exciter. Actually, I had one of those on the air for the first
five years or so of KOME. We called it "The Iron Fireman". If you kept
the 1614 tubes fresh and the STP level up in the AFC motor assembly, it
would stay pretty well behaved. The tricky part was getting composite to
the grids of the balanced modulator without using the stock transformer!
(A WE 111C works great.)

If I'm not mistaken, Spot Taxi sends their stuff in MP2 format and their
client software can be configured to automatically convert to MP3 when
saving.

As a private pilot, anything much higher than 500' AGL is a noticeable hazard to me, particularly in the Baltimore/Washington DC area.

Common VFR flight often starts at 500 AGL in rural areas.  In theory, one is supposed to maintain at least 2000' AGL in congested areas, unless you're taking off or landing.  Unfortunately, that's often what we're doing in those congested areas because that's where the busy airports are.

Thus I get concerned with anything above 500' AGL. It's not so bad when I'm flying locally because I know where most of these sticks are. The problem is if I'm flying to a city I'm not that familiar with. No, I haven't had any near misses, but I have had radar vectors which, had I followed them would have sent me straight in to a very tall tower.

Tall towers aren't always depicted as well as we'd like on radar scopes of controllers. And even though you think those lights on the tower have great visibility against an open sky, you have to remember that those of us who actually use them are usually looking at them against a backdrop of a very well lit ground. I know neighbors hate those white strobes; but damn, those slowly blinking red lights just aren't that easy to find against a backdrop of street lights at night.

I'm a bit confused as to what the attraction is to such tall towers. I've yet to notice much difference in coverage when I'm flying at 1000' AGL versus 2000' AGL. I don't hear any other aircraft or controllers I didn't hear before, I don't hear any new AM stations, nor do I notice any new FM stations where there were none before. So I really don't understand what the attraction is with such tall towers. It seems to me that beyond 1000' AGL there isn't much advantage for going to the extra altitude.

Can someone explain why sticks above 1000 AGL or so are desirable?

I would hope that would be the case... but if anybody can put me in
touch with somebody who cares and will listen, I would be very
thankful.  So far, I have even contacted the division of the ARRL
which deals with interference to amateur radio (and these LED traffic
lights do generate RFI well into the HF range) with no response.

Rob:  I concur with the other respondents to your message.  I too was into trying to squeeze performance out of the 8000 back in '76 and '77.  It's not going to happen today against major market folks, not even close.

Before 8100 came out (in '79 I think) which was a very good analog multi-band performer, we used a Multi-Max compressor-limiter made by Pacific Recorders (PR and E) which was multiband and had a terrific set of time constants that seem to complement the 8000 pretty well. Its crossover frequencies could be adjusted to sound very natural on most programming, yet give a lot of great "punch"  where you wanted it.  It permitted the 8000 to sound good in the "fast" mode which too advantage of all the fast limiting it had on hand.

The addition of a Modulation Sciences CP 803 composite clipper did a lot for the loudness war, at the expense of some distortion when driven too hard.  The LEDs on the CP803 were there for a reason!  If you have an SCA, be careful with composite clipping, it really mucks up the baseband.

The 8100 blew that combo away and the rest is history.   (The 8100 also benefited with a little composite clipping too.)

Current 8200, 8400  and Omnias just are too difficult to compete against, even with a rack full of equipment..

Both Omnnia and Optimod make "lite" versions that are not too expensive to buy and sound excellent with out the complexity of the larger units (and some of the flexibility.

8000s also get out of adjustment and can sound just awful, especially when the electrolytics get old and the op-amps start drifting etc. Technology in analog ICs was still moving ahead at a rapid pace in the 70s Be careful.

Multi-Max and composite clippers like the CP803 do show up sometimes on the used market.  For my money I would buy a modern bare-bones unit from one of the majors and you will be happy for a long time!

Phil

> Listeners want to hear clean/clear sound

Low-bit-rate digitally compressed audio is neither "clean" nor
"clear"... just listen to XM, Sirius, or IBOC for an example.

And if that's all listeners care about, then why even bother producing
commercials in STEREO?  Most FM radios operate in blended-to-mono mode
most of the time (especially while driving), so what difference does
it make if they never even get to hear the Stereo sound anyway?

Besides, if you kill the Stereo, you can drop the MP3 bit-rate even
further, and the listeners won't care!  Just like with today's crappy

digital mobile phones that sound like you're calling from Mars when the signal starts to cut out and gets all garbled -- hey, it's CRYSTAL CLEAR, with NO STATIC AT ALL, so it MUST be better than analog, just like the fancy TV commercials say!

> In my market (Ottawa Canada), our major competitor moved into their new
> building, and eliminated tape except for client cassettes.

We stopped sending clients cassettes a couple of years ago. Our sales people all have CD Boom Boxes to take to play the spots. A blank CD is at least half the cost of a cassette and the quality is much better. Our graphics/promotions dept. bought this label making gizmo at Office Max and we print up impressive labels for our client dubs. Originally, the clients were really impressed, but now it has become the norm.
We have 4 production/voice-tracking studios, all of which contain Cool Edit Pro and Nero Burning ROM on a separate PC/Network than out on-air delivery system..
They are all on a peer-to-peer network with a mirrored server, so all files are available from any machine or from the on-air studios.
Radio has changed more technologically the past 5 years than at any point in it's history (at least from my perspective).

Some stations have mile-high sticks. We call the support structure a "mountain."

Generally, the higher the antenna, the better the coverage and the more successfully the signal can penetrate shadow areas that would not be coverable from a lower site.

If both the VO guy & the studio are on broadband, is the audio quality
anywhere near usable for recording VOs, ISDN line-style with
NetMeeting, Timbuktu etc?

The other idea we're tossing round is to produce the sess over
NetMeeting's audio, but have it recorded into the computer at the VO
end, then send it as a file transfer.

Anyone tried this stuff?

Sorry if this got posted twice, didn't show up so resent thru Google.

How far away are you from the station transmitter ? (Think it was Lodi, NJ)

Something else local with stronger signal / harmonic throwing junk into your
radio ?

Do you get the noise with other radios or radios in other locations or A/C
power vs battery power or one type of antenna vs another ?

Anyone in your area running IBOC tests on adjacent freqs ?

My typing is really getting bad, I left the 0's out of the exciter model numbers, which should have read BTE-10B & BTE-10C, you have good manners not to correct me.

What is "AFC wobble"?  Are you talking about the BTE-10B, or the older exciter with the motorized capacitor?  The BTE-10B had an off frequency detector that I would think would take the transmitter off the air if there was any "AFC wobble"?

> BTW, I got an FCC advisory on the 1C spur once. That's how I found out
> about it.

You said in an earlier post that the built-in spur in the BTE-10C was "non-curable", I'm curious why it was "non-curable"?  If it was the result of unintentional coupling of the reference oscillator into the main RF path, I would think that some mechanical redesign, adding shielding, or rerouting wiring, would solve the problem.  If the "spur" was actually feeding through the AFC circuit and magnetic amplifier, I would think that extra filtering could be added to get rid of it, the magnetic amplifier is so slow I can't imagine that extra filtering would make the loop unstable.

FCC-licensed "Experimental" station WI2XAM on 1700 kHz is now operational, with 50 watts daytime and nighttime transmitting from the Lucent offices in Warren, New Jersey.

I caught them on the air today (Tuesday October 29th), playing about an hour-long loop of music excepts (never a full song), ranging all the way from Classical to Country, Rock, and Pop.  There were no IDs or announcements except for legal IDs of "WI2XAM, Warren, New Jersey" or "This is WI2XAM, Warren" at seemingly random times, in addition to the top of the hour.

The purpose of this station is to test the new IBOC digital AM system, also known by the marketing name "HD Radio".  And indeed WI2XAM was using IBOC, with the digital sidebands splattering all the way from 1685 to 1715 kHz, enough to cause a constant background hiss in the audio of nearby WTTM 1680 AM Stereo from Princeton, NJ.

WI2XAM was also stepping all over a very nearby 10-watt TIS weather info station, WPSH468 in Manville, NJ, also licensed to 1700 kHz.  On my car radio driving in the area between these two stations, 1700 kHz was pretty much a 50/50 mix between the two.  Also while driving, I caught WI2XAM on the air until at least 45 minutes after local sunset, with the digital sidebands totally murdering normally good skywave reception of WPTX 1690 AM Stereo from Maryland.  I came back to the radio at around 8:45 PM and WI2XAM was finally off the air for the evening.

Here is an MP3 sample of how WI2XAM sounded this afternoon at my home roughly 5 miles away from the transmitter, with the characteristically poor analog AM audio quality of a "hybrid" IBOC signal (limited to < 5 kHz frequency response), and also WPSH468 faintly audible in the background:

http://rvcc2.raritanval.edu/ktek9053/wi2xam.mp3

Meanwhile, here is a pictorial representation of the two low-power 1700 kHz stations overlayed on the coverage of 1680 WTTM, showing the overlap amongst all three:

http://rvcc2.raritanval.edu/ktek9053/wi2xam.gif

1700 WI2XAM isn't Warren, NJ's only AM radio station; here is a recording of Warren's own Part 15 station "KJFE" on 1500 kHz in full C-Quam AM Stereo:

ftp://209.193.86.116/North-America/USA/NewJersey/1500kjfe.mp3

Now, which one sounds better to you -- and not just because of the wider variety of music and the fab liners?

Not only can they sound awful, they can develop less obvious but nevertheless detrimental problems. One of them is to suddenly suffer a lack of 38KHz suppression. FCC rules require -40db, but most stereo generators (including the 8000 when it is working properly) easily exceed this by a wide margin. In failure mode, however, it can be only a few db down. Besides violating FCC rules, presence of 38KHz carrier can produce an insidious multipath effect, making it sound as though the station has serious coverage problems.

I've run into this several times with 8000s and believe me, the first time was a real circus, particularly trying to figure out why the station was suddenly multipath-ridden within a mile and clear sight of the transmitter!

RCA also used "The Iron Fireman" exciter, with the motorized capacitor, in their first post war generation of Television transmitters.

> The tricky part was getting composite to
> the grids of the balanced modulator without using the stock transformer!
> (A WE 111C works great.)

Why couldn't you feed the composite to the grids of the balanced modulator using a triode connected as a split load phase inverter, as RCA did in the stereo modification kit for the BTE-10B?  RCA advertised that their stereo generator could be connected to "The Iron Fireman" exciter, as well as the then current BTE-10B, and I always figured they would use the same basic conversion as with the BTE-10B.  I have never seen one of those old "Iron Fireman" exciters, let alone one that was converted to stereo, but I have often wondered if any were converted to stereo, sounds like they were?

That jogs a memory of a mystery station from March 14 2001 that finally
identified as WD2XAM 1660 in Cincinnati
http://rhhardin5.home.mindspring.com/wd2xam.ra (67k)

The weak signal at the beginning is WQSN 1660 Kalamazoo MI.

They had the decency to stay within their channel then though.

Central Ohio, about 3pm, about 125 miles away.

I wonder if the purpose of the "music excepts" is to avoid copyright, or whatever, payments somehow?  Anyone know if this is possible, if you can play part of a song without making copyright, or whatever, payments?

How come "KJFE" isn't included on the coverage map for WI2XAM?

IIRC, there is also a mode in which analog audio is only(?) limited to 8 kHz, but which requires the receiver to use both IBOC "sidebands" -- in 5 kHz mode only one of the two is needed.

The Damned rock.

but who'd admit to being employed with Clear Channel? They're reading
your emails anyhow.

Keep hope alive,
Luke

Ever tried reaching anyone at a CC station? That's a bit hard when
they're firing them left and right. ;)

> often wondered if any were converted to stereo, sounds like they were?

The first method we used was a homemade solid state amp which had inverted outputs. Without RCA's transformer in place, a lot of nasty RF would feed back into the amp despite filtering. We found it easier, ultimately, to mimic RCA's original design, but with a "broadband" transformer. It worked quite well. The only real problem with the Iron Fireman was its hum level and its susceptibility to microphonics. It was a constant battle to meet -60db noise levels. We went through a lot of rubber grommets.

I knew those weren't the correct numbers, but since I couldn't remember the right ones, it didn't seem prudent to correct someone with incorrect data! :-)

> there was any "AFC wobble"?

The Iron Fireman's AFC had jitter of several hundred Hz, apparently due to the time constants of the motor and its damping mechanism. The FCC inspector observed the jiggle on the Belar monitor and first assumed that it was measurement ambiguity. I told him that the monitor was reading what it saw (you could even see the motor movement corresponding with this wobble), so then he tried to find some rule that proscribed the frequency jitter. He couldn't.

Memory fades after all these years, but as I recall, we were able to reduce the problem substanially, but not entirely. (We're talking about the 10C now.) I believe the "cure" involved both filtering and an alteration of the time constant. But the spur was always measurable.

I have not read the law about cigarette commercials but this is my take...

GSN is not receiving any compensation from Marlboro.
Also, they do not show any commercials that promote the *benefits* of the
Malboro cigarettes.

The only references is the Marlboro name on the stage and in the credits and
the host telling the contestants to pick up a carton of Marlboro on the way
out.

If they were to say that the miniscule references to Marlboro on GSN shows
is illegal, then let's also ban the coverage of the NASCAR Winston Cup
series.

Probably done to evaluate / demonstrate the effects of the IBOC artifacts on various types of music.

Since KJFE is not a licensed radio station, it doesn't exist in the FCC databases and is NOT a "radio station" in a legal sense.  Thus it receives absolutely no protection against interference.

No,

Even bumpers on talk stations pay public performance fees.

Many Canadian commercial stations had Shortwave licenses in the past.,
mostly to serve the northern parts of the country before satellite and
microwave extended service to that area.
They were additional licenses granted by the CRTC and it's forerunners
and usually duplicated the station's AM programming.
The CBC still operates an international service on Shortwave but most
of the others, CFRB Toronto, CFCF, Montreal and CJCA Edmonton are long
gone.  Even CJCA AM is gone.
There were others as well but my memory isn't clear on these.
Hope this helps.

Mike Ward wrote:
> Mr. Hardin, you have absolutely no idea what that woman, the widow of
> the baseball player, is going through.

Yes, I know what a widow is, thanks.

Try reversing the sexes. Some woman DJ calls a _guy_ and offers to take him to the game.

Guys can take care of themselves. Women can't, according to you. The world is too tough for them.

But if I think of an actual woman (you must know one or two, try it) they all know what to do with such a call.

The bit is not to offend her but to offend you and bluenoses like you. That's what appeals to the demo it's aimed at. You can take it as feminist in that respect: women are not idiots.

I don't happen to think it's a good bit, but at least analyze it correctly.

The station caved, of course. Lots of canaries are dying in the mines nowadays, test cases that were protecting programs that you yourself like, perhaps.

> is the audience attracted by the programming. To the listener, it is simply
> the programming.

The audience is not doing business with the radio station. The audience does not pay the station any money. The station has no interest in the audience except as product to sell to its customers, who are the advertisers.

No, actually.  To account for, for example, news coverage, you have to realize
that
the product is audience, not programming.  ``Tornado danger, can it happen here?
Tune in at six.''  Or hyping upcoming coverage of the last press release the news
department got from anybody.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
_AND_
we celebrate 55 years of student broadcasting at UM

Hey Old Time Radio Fans!

I wanted to let you all know that my "War of the Worlds" radio documentary will be airing on about 40 radio stations over the next two weeks.

"We Take You Now to Grover's Mill" (29:40) A radio documentary of the making if the "War of the Worlds" broadcast, which features my interviews with John Houseman, Howard Koch, Arthur Anderson and townspeople of Grover's Mill who where around at the time of the 1938 broadcast. I interviewed John Houseman only weeks before his death (on the 50th anniversary of the infamous Orson Welles broadcast). It turned out to be the last interview Mr. Houseman ever gave.

The Associate Producer of "We Take You Now to Grover's Mill" was Thomas Babkowski.

I do not have a schedule for each station running the show. I do know it will be broadcast in the New York City area on WNYC, AM820, on Sunday, October 27th, at 9:00 pm (Eastern time).

If you do not live in the New York area and a station in your area is not carrying the show, you can hear it online at:

http://www.wnyc.org/asx/wnycam.asx

Hope you like it!

Joe Bevilacqua

PS:

I've also put a few CDs of the show up on eBay if you want your own copy:

This question was also posted and answered in the rec.radio.shortwave newsgroup.  I don't know the details of the history and licensing of these stations, but I can report that I have heard CFRX 6070 (relaying CFRB) and also the CBC outlet in Newfoundland on 6160 as recently as this summer.  I find they're best heard after 0700 UTC.

I conceded that programming is influenced by advertisers, and I said these
are radio stations run by morons.  Look for other radio stations.

 Hello Bob
 dont feel bad I'm the CE of a pair of co-located AMs.. one is directional 4
towers and the other is a non-directional -Diplexed into one tower.
 6 towers in the array. and we dont own any of them..
 go figure  owning 2 AM's and not the Towers or the land they are on...

Ron Hardin <rhhardin@mindspring.com> wrote:

"Try reversing the sexes.  Some woman DJ calls a _guy_ and offers to take him to the game."

I can see where some people might be offended there, too.  But you're
glossing over the fact that this DJ didn't merely offer to take the lady to
the game.

"Guys can take care of themselves.  Women can't, according to you.  The
world is too tough for them."

You're still missing the point.  It's not whether she can or can't take the
stress -- it's that she shouldn't *have* to be an unwilling participant in
some idiot's ratings stunt.

"The bit is not to offend her but to offend you and bluenoses like you."

Irrelevant.

"The station caved, of course."

Thank goodness.

competing
> brand.

I don't think this is an accurate reference sine "What's My Line" was sponsored by Geritol during it's entire CBS Sunday Night network run (hosted by John Daily, it began on Feb. 16th, 1950 and the final episode aired on Sept. 3, 1967, making it the longest running prime-time game show in the history of television).
The syndicated version hosted by Wally Bruner began in 1968, at which time cigarette commercials had been banned.
You may have it confused with another show, perhaps "I've Got A Secret"?
I know it has nothing to do with your point, which is interesting and I am sure factual, but it couldn't have been "What's My Line".

I read an article in the Indianapolis Star about the wonderfulness of IBOC.
Most of their material came from the engineers at Emmis (which owns a stake
Ibiquity), but their exact words were; "AM Radio will sound like FM Stereo
and FM will sound like CD's.".
This is contrary to what I am hearing on this (and other) Usenet groups.
I have read Brad Jackson's comments on this forum and have found them to be
interesting and (probably) accurate.
However, I wonder where Emmis has come to the conclusion that AM will be so
great and FM will be better than sliced bread.
Also... Perhaps I have missed something, but I noticed that the FCC has
approved IBOC for use on AM during daytime hours only.  Does that mean that
at sunset, all AM's (even the 50kw blowtorches like WABC, WLS, WRVA, WSM
etc) will have to cut the digital signals?
Is there any future for IBOC on AM if they gotta kill it at 4:15 PM (legal
sunset in Chicago in December)?

Dear Neal:

Thanks for the email. I got a chuckle as my last job
in radio was CE for a 5 KW AM in NYC! Hi!

Perhaps you wear "other" broadcast hat. I once was Station Mgr/CE for an AM/FM in Colorado and really enjoyed it tho I normally stick to engineering.

I will be visiting the Idaho station in the next few weeks. It is KIGO in St. Anthony, ID. 1400 KHz class "C" AM 1 KW fulltime. On the air since 1966.

Total asking price is $60,000 and the seller wants $10,000 ernest money to lock up the deal.

How would you feel about living in a single station maket with 3400 in the city of license. Almost 5,000 ft. above mean sea level?

I am a 67 year old semi-retired broadcast engineer. Ham since 1950. FCC commercial ticket since 1951. Was the past President and founder of noncommercial KPOO(FM), San Francisco. It is on since 1973.
Presently I live in Macon, GA

Your comments?

73,

Meyer Gottesman, W6GIV

That's all I'm talking about here. An advertiser has the right to be associated (or not) with content that he feels would be influential over an audience with respect to the product. Right or wrong, the advertiser is writing the check.

If Orchard Supply Hardware does not want to be associated (by name) with tasteless discussions on how to commit crimes of kidnapping, then it has every right to discontinue its sponsorship on a station. To then call the station management "morons" because, in the end, they agreed with the sponsor and took remedial action, is itself reactionary.

Note that this is in contrast with the St. Patricks Cathedral incident where the advertiser was present and encouraging during the programming in question, but then recanted his approval when the excrement hit the fan.

Somehow I have more respect for the hardware store chain than I do for the brewery.

Probably not what you're hearing, but WCHB 1200 Detroit is hashing up
the joint with day and night IBOC.

The stereo subchannel is AM, whereas SCA's are FM. I suspect they'll be less susceptible, assuming equal levels of noise in both parts of the baseband.

If IBOC interferes with FM stereo, it's dead in the water, I think.

Two things to consider:

The modulation index of the SCA subacrriers is low, so you don't get much "FM improvement".

The SCA carriers are at higher main-channel modulation frequencies than the stereo content so they are closer to the IBOC content.

It's true, they are morons.  There's even a simple explanation for it,
called the Peter Principle.  You're promoted until you reach a spot
where you're incompetent.

The NYSE had an ad on Imus announcing the transition to 24-hour trading, so Imus adds to it ``Now what does this mean if you're a coke dealer? It means great business for you.  Traders are going to need more than coffee.''

The NYSE did not cancel the sponsorship, getting the reputation of being good sports, in a frame that's wider than ad-in-a-radio-show, namely in real life.

Orchard Supply, on the other hand, is I hear associated with Sears, which no matter what you buy want to sell you a service contract on it, and is populated top to bottom with Peter Principle personel as well as old prunes.

How do I know this, there being not a single Orchard Supply near me?
>From their complaint about the DJ.

That's why they're morons, and the radio station as well.

[ Moderator's note: The PP is actually something along the lines of "Each person rises to his own level of competence within the company", iow the more incompetent you are, the higher you go. ]

Actually, the stereo information is double-sideband, suppressed carrier.
It is very delicate in that the slightest amount of interference from

any source reduces stereo separation. Noise in the stereo subcarrier will manifest itself in both channels, 180 degrees out of phase. The SCAs, on the other hand, are vulnerable due to their small bandwidth and proximity to the edge of the band.

> If IBOC interferes with FM stereo, it's dead in the water, I think.

Or, it will accelerate the day when we drop hybrid mode.

Hmm...I guess I was dreaming when I slogged around at Clay/Jones turning up that junk transmitter for Lorenzo Milam's KPOO.

If it's not whether or not she can take the stress, then I don't see what you're objecting to; or how you think it gets ratings, unless it through it's offending people like you, which the audience presumably un-identifies with, being young, I'm guessing.

The only _interest_ is from the morally superior faction, and it's intense. It says something about the American moralist tribe, that this is what they are moved to complain about.  The point of the stunt is to provoke that complaint.

Ask why anybody would want to offend you.

It is, to be charitable, a wildly inaccurate assertion.  IBOC makes AM sound like bad streaming audio on a slow internet connection, and makes FM sound like low-bit-rate MP3's.  My own listening finds the AM IBOC intolerable.  The FM would probably be accepted by most consumers if they didn't have anything with which to directly compare it.

>However, I wonder where Emmis has come to the conclusion that AM will be so

Since 710 WOR has posted a sample recording of how their "HD Radio"
(a.k.a. IBOC) digital audio sounds, I took the opportunity to compare
it to the regular analog AM audio that WOR used to transmit with full
NRSC bandwidth prior to the use of IBOC.  You can listen and decide

for yourself which one sounds better.

First, WOR's sample recording of their HD Radio digital audio, from the iBiquity test receiver (October 2002):
http://www.wor710.com/Engineering/iboc/dolans_digital.wav

Now, here's what they sounded like on a $29.99 Sony SRF-42 Walkman back in 1997:
http://rvcc2.raritanval.edu/ktek9053/wor-hifi.mp3

To my ears, the HD Radio digital audio sounds remarkably similar to a 20 kbps RealAudio "web-cast" -- there is a little extra high end, but the overall audio is so filled with digital "artifacts" (a wishy-washy, chattery, "congested", "underwater" type sound) that the clean, natural sound of analog AM is highly preferable, even with a narrower audio response (in this case, the Sony uses a 6 kHz ceramic filter).

For Sale operating, profitable FM station in Chama, New Mexico - KFLH on 95.9 mHz.  See radiostationforsale.com for details.  Please, Please, no "tower kickers" - this is a real opportunity for a legitimate buyer.  Thanks, Don Davis

Is there a way to search all radio station playlists at once?

I'd like to be able to ask "who's playing Vivaldi right NOW?" and get
a list of radio stations with links to their web-streams; or to ask
"when will a Haydn symphony be played, where?" and get a list of
stations along with the scheduled time.

One does not have to be ignorant, crude, rude, or a boor to either think young or even be young.

> The only _interest_ is from the morally superior faction, and it's intense.

This is over the edge. i put no stock in people who take offense at anything and everything that comes along. Individuals and groups who dissect every phrase and every word spoken on the radio for the purpose of finding something by which to be offended can kiss my posterior and that of the radio station I work for.

But when someone on the radio does something for the SOLE purpose of offending people (no humor, no drama, no art...just being offensive), then he deserves what he gets...be it fired, suspended, docked, whatever. It has nothing to do with morality, it has to do with common business sense.

> Ask why anybody would want to offend you.

It is very, very difficult to "offend" me. Someone simply wanting to do that isn't nearly enough.

The Ontario DX Association handles QSL requests for CFRX, which does
appear to still be broadcasting on 6070 KHz (I have never been
anywhere I could hear it, tho).

http://www.odxa.on.ca/cfrb.html

I found just ONE mention of CFRX on CFRB's own Web site (www.cfrb.com)
- on the Contact page, the E-Mail address of the QSL manager...

Exactly my impression. To my ears, most of the product of high-tech, low-bitrate codecs is an undesirable tradeoff. It is the trading of limited frequency response and relatively high noise floor for a "busy" and unfulfilling mechanical sound of digital "ear-foolery". In my opinion, it isn't worth the trade.

Remember, the hook for broadcasters isn't the audio quality, it is the "RBDS on stearoids" that is being hyped by iBiquity and Impulse Radio. This data, which is essentially banner advertising for radio stations, is supposed to be the savior of radio broadcasting.

Hi John,

I went back to see exactly what your original claim about "envelope" detectors and CQUAM single channel modulation was, and found the following:

"Such a case (one channel only being broadcast in stereo mode, pilot on or off) would have a very detrimental effect on many monaural radios. It would appear to the radio's envelope detector as extremely heavy IQM and the listener would be subject to very fatiguing distortion. Only synchronous and compensated envelope detectors would be able to handle this "one channel only" condition with any grace. Cheap radios would sound like crap."

I hesitate to point out that an ordinary monaural "synchronous detector" will not deal at all gracefully with a CQUAM signal, with modulation on one channel only, distortion will result, worse distortion than with an envelope detector.

I am not familiar with the "compensated envelope detector" you mention, can you explain what that is?

I am not disputing your statement that single channel modulation of a CQUAM system will have a detrimental effect relative to a simple monophonic AM signal.  What I disagree with is your blaming this effect on "envelope detectors", and claiming that it does not also affect stereo radios.

In article <aosmug$s0o$1@xuxa.iecc.com>, John Higdon <no-spam@amadeus.kome.com> wrote:

Is it fair to characterize that statement as saying that the distortion will be significantly greater on a monophonic radio, than on a stereo radio, when the radios are otherwise identical as far as IF and audio response, the only difference between the two radios being that the monophonic radio uses an envelope detector for demodulation, while the stereo radio uses some sort of stereo demodulator IC?  With respect to the stereo demodulator IC, in your experience does it make any difference if the stereo demodulator IC is 1980's technology vs. some sort of newer 1990's technology?  In other words, do older CQUAM stereo radios, as well as the latest models, handle single channel signals about equally well in your experience?

With respect to the "distortion caused by  phase shifting carrier", what makes the ordinary "synchronous detector" you mentioned in your original post immune to this distortion effect?

> As for the rest of your reiterations, I'm not going to argue theory that
> pics nits with grossly evident reality. My original point that a stereo
> station broadcasting one channel only in stereo mode produces noticibly
> inferior audio on a typical mono radio than does a standard mono signal
> stands.

No, I don't have any problem with that statement, but that wasn't what you originally said.  Your original statement, as quoted above, blamed the envelope detector for the problem, whereas I believe the actual problem is elsewhere in the radio.

> If you are in town some time, I'll be happy to demonstrate it for you.

OK, I will keep your invitation in mind, it sounds interesting, I might even bring a couple of radios, to help pin down where the real problem is.  How do you propose demonstrating this effect, on an actual station, or with a signal generator or CQUAM exciter?  I assume that in addition to the single channel modulation, the demonstration would include both the "pilot" on, and the "pilot" off cases?

Can you identify any of the radios you have observed this problem in, as well as the stereo radios that didn't have the problem?  It would be interesting to see if there are any patterns.

Regards,

John Byrns

>
> How do I know this, there being not a single Orchard Supply near me?

That is a good question. You neither heard the radio program nor do you have a clue regarding the nature of Orchard Supply Hardware, its origins and history as a thriving business and a community corporate citizen or even how it is currently run, despite ownership by Sears. Yet you have immutable opinions about everything involved.

I guess there is no point in discussing anything with someone who is fully ignorant of any of the facts surrounding an event and who would be unwilling even to factor them into his arguments if by some chance he should learn them.

> That's why they're morons, and the radio station as well.

I'm sure both are too busy taking profits to the bank to be offended by your remarks.

And by all means, never let facts or reality get in your way.

Whatever. I have simply observed that some radios, typically more
expensive ones, are much less affected than others, typically cheap
ones. I simply attributed it to detector design.

I'd think using RBDS for performer / composition to compete with the satcasters would be a more effective use - but what do I know...  OK, display advertiser info during commercials.  I haven't figured out a useful application for talk radio.

Try listening to 1180 WHAM at night here too, covered with digital hash. Listen to WCHB on a GOOD AM receiver, the 5KHz bandwidth AM signal has quite a bit of digital noise too.  Would be interesting if WTAM, 1100,  Cleveland went IBOC, they put a decent signal into the Detroit area and there is a first adjacent station (1090) here too.

It is, to be charitable, a wildly inaccurate assertion.  IBOC makes AM
sound like bad streaming audio on a slow internet connection, and
makes FM sound like low-bit-rate MP3's.  My own listening finds the AM
IBOC intolerable.  The FM would probably be accepted by most consumers
```

if they didn't have anything with which to directly compare it. But it is NOT CD quality--not even close. In fact, a direct A-B comparison shows it's obviously inferior to analog FM. The only advantage it offers is datacasting.

>However, I wonder where Emmis has come to the conclusion that AM will be so
>great and FM will be better than sliced bread.

I am amazed by the amount of self-deception in which major radio executives are indulging over this issue, apparently because they see revenue potential in being able to send out a data stream. IMHO it would not be a good idea to trash a successful business for an unproven one that faces even more competition and weak demand (how much dark fiber is in the ground these days, fellas?)

>Also... Perhaps I have missed something, but I noticed that the FCC has
>approved IBOC for use on AM during daytime hours only. Does that mean that

>sunset in Chicago in December)?

If ever a technology was not ready for the market, this is it. What is the point of putting an inferior product on the air, degrading your existing analog signal, and splattering interference onto adjacent channels? I don't get it!

I also was trying to hear WHAM when a few months ago I started hearing
the IBOC stuff spewing either side of 1200. An IBOC WTAM 1100 could put
a hurt on Catholic broadcaster WCAR 1190's nighttime peanut whistle
signal.
I think here in Detroit we're on a tiny null of WTAM, as there is pretty
consistent selective fade regardless of season. The local papers here of
course were covering the iBiquity IBOC pitch to the Convergence auto
electronics convention going on here this week. Basic propaganda
message- it's digital, so it's just got to be better. Feh.
Lots of local discussion of this on the Michigan Radio-TV Buzzboard site.

King Daevid MacKenzie, UltimaJock! <kingdaevid@elknet.net> wrote:

"...I've been watching the kinescoped reruns on Game Show Network for several years now, and although they usually edit out the cigarette plugs on most of the shows, there's usually several that get left in because clipping them out would disrupt the continuity. Thus far, I've _never_ seen anything to indicate the Daly version was sponsored by Marlboro or any other brand of cigarette, but I have seen quite a few other sponsorships (Stopette, Remington-Rand, Hertz, General Foods)..."

I'm seeing Stopette in the ones running now (on Black & White Overnight). ISTR some joke from some early-50s TV show (which I only heard on an album) about somebody who drank a bottle of Stopette and "'poof'-ed himself to death!" :-)

"..."I've Got a Secret" was sponsored in its earlier years by Winston, not Marlboro..."

I found the reference to this incident ("The Box" by Jeff Kisseloff, page 521), and the show turned out to be "To Tell The Truth."  I've seen episodes of that on Game Show Network with plenty of Marlboro identification visible. AFAIK (though I'm no lawyer), it's not a violation of the ad ban to show these programs with the branding still visible *if* they are not being compensated for showing it in that manner.  The same exception allows cigarette commercials -- not just pre-1971 ones, but commercials produced for showing in other countries or in other media -- to be shown, even in full, in documentaries and similar situations; it's not considered advertising if there's no payment for showing the ad.

I find it interesting that the US is going IBOC for terrestrial digital radio when the rest of the world is using the Eureka 147 system.
The sound quality of Eureka 147 is vastly superior to IBOC and it offers the possibility of many more services besides superior audio.
I realize the official US response is that the frequencies used for digital radio around the world are assigned to the US Military.
Incidentally, digital radio has been availiable for several years in Canada's major markets, Toronto, Montreal, Vancouver, Windsor, coming soon in Ottawa and other cities.
The problem has been the lack of affordable receivers.
GM is putting digital receivers in it's Canadian models starting this year.
Radio Shack is about to release affordable models at the end of this month in Canada, including portables, clock radios, walkman style devices and car models.
This should start the ball rolling for digital radio in Canada.
Here, all existing stations can get a digital license for each of their exisiting AM and FM licenses.
Living in Vancouver, Canada, I guess I will have to get an IBOC receiver for the US stations and a DAB receiver for the Canadian signals.

John Byrns <jbyrns@enteract.com> wrote:

"I am not disputing your statement that single channel modulation of a CQUAM system will have a detrimental effect relative to a simple monophonic AM signal.  What I disagree with is your blaming this effect on "envelope detectors", and claiming that it does not also affect stereo radios."

It wouldn't (or at least shouldn't) because the decoding process would use the decoded L-R signal to recover the original L and R signals.  Remember that the C-QUAM signal is "predistorted" by taking only the PM component of a QUAM signal and then amplitude modulating it in the usual way with L+R -- which is supposed to mean that the resulting C-QUAM signal will come out okay in mono with an envelope detector, which would not be able to cope with straight QUAM adequately -- and then the decoder uses the difference between the outputs of envelope and in-phase synchronous detectors (the latter will be badly distorted because of the remodulation process) to correct the corresponding distortion in the quadrature synchronous detector (L-R) output.  Hopefully, even in an extreme case where some distortion still remains with an envelope detector, the predistortion of the L-R (PM) signal should cancel out that distortion to give good L and R outputs.

Cigarette commercials were not banned until 1971.

> You may have it confused with another show, perhaps "I've Got A Secret"?
>

I've Got a Secret did have a cigarette sponsor, but it was RJ Reynolds, and the show offered Winstons, Salems, and Cavaliers (an obscure non-filtered brand that is now long-gone). Marlboro is a Phillip Morris product.

Not oficilly.. but a lot of interens from the art insitute ran shows there when they didn't broker out the time. That's how I got my start. My good frined Steve (and fellow Aart Institue of Fort Lauderdale attendee) Norman also did a slot there. He then became the intern of Ron & Ron's morning show on WSHE, and is better known to the world as 'Omlette' I actually took over his timeslot when he went across the hall to SHE.

I miss partying with that guy...

Which is kind of ironic. At the 1964-65 New York World's Fair, didn't they have a pavilion with a restaurant, and the pavilion was called the "Festival of Gas"?

Any device with the word "digital" on it sells better!
Never mind the quality.
Ruud

Still, an awful lot do.  It would be nice if they coordinated a bit,
i.e. not playing a piece if 10 other web-casters are playing it at the
same time.

> consistent selective fade regardless of season.

WTAM has no nulls. It is non-directional. You are probably in an area where there is ground- and skywave cancellation at night.

[ Moderator's Note: There are some interesting patterns between Cleveland and Detroit that, not being a radio engineer, I've never quite understood. I can get 800 CKLW and 93.9 CIDR from Windsor loud and clear here because there are no radio stations in the region on those frequencies. I also never have a problem receiving WJR here.

At times I've also gotten Planet 96 (do I have the name correct? WHYT, I forget the frequency) in spite of a very strong signal from 96.5 in Akron, and WRIF on 101.1 in spite of a somewhat decent signal from 101.1 WHOT in Youngstown. Hot 101 is strongest south of Cleveland, though, and in the right part of Cleveland, reception of WRIF is crystal clear - particularly in Richmond Heights and Willoughby Hills.

It has to have something to do with the lake. If you draw a straight line on a map between Cleveland and Detroit, most of what the line will cover is Lake Erie. ]

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

     2002 is the 30th birthday year of WCBN-FM
                      _AND_
we celebrate 55 years of student broadcasting at UM

.

Why is it that almost all commercials on FM sound so bad these days? I'm not talking about the content of the commercials -- I'm talking about their audio quality, or lack thereof.

As I understand it, these days commercials are commonly delivered to radio stations via the Internet.  That is fine, but when played on the air, why do most of them -- expect "in-house" commercials that the station itself produces -- sound like they are sourced from 64 kbps

MP2 files? I'm talking about the harsh, chattery, gritty, metallic, wishy-washy artifacts that are clearly obvious in the audio. It's especially bad when you listen to the L-R Stereo Difference component of the sound, which reveals that Stereo encoding is used even for mono voice, as in this casse the L-R component should be silent or only a faint (but undistorted) echo, but instead is heard as a large amount of what can only be described as "audio garbage".

And these "artifacts" don't even seem to be the kind one gets from a typical Xing-encoded 128 kbps MP3 file. They sound more like an older, less refined codec, very similar to MP2, or the original version of RealAudio. I know digital audio is "the future", but why do people have to stick with 1996 technology? If you're going to send your commercials to stations over the Internet, why not use something like at least 192 kbps MP3, and have them actually sound *good* on the air, with clear, human-sounding vocal sibilance and musical percussion that doesn't sound like metallic chattering effects?

Combined with the increasing number of stations which are playing *music* that has these same digital quality problems (indicate of the inappropriate use of "lossy" digital data compression) and the large amount of audio processing that is in vogue with today's "Loudness Wars", it has gotten to the point where I have to turn the Treble control down quite a bit just to stand listening to most commercial FM stations. Only Classical and non-comm Jazz and NPR stations seem to have crisp, clear, truthful, high-fidelity sound on FM anymore, and also the handful of pop music stations that still play music direct from CD and commercials from good old-fashioned carts (SHOCK! HORROR!).

I can only imagine what IBOC, a.k.a. "HD Radio", will do to further fall down this slippery slope. Just think of a typical production chain... a caller using a digital PCS mobile phone is recorded as a testimonial on a radio commercial, which is encoded to MP3 audio for Internet delivery to the radio station, which transcodes it to MP2 for storage on their computer audio system, then runs it through a digital audio processor and a lossy-digital-compressed STL to the lossy-digital-compressed IBOC transmitter which then broadcasts it as a low-bit rate AAC stream with "simulated" SBR treble response. After about a half-dozen lossy-digital transcodings and two dozen A/D-D/A conversions later, the listener finally gets to hear it in all its "CRYSTAL CLEAR, CD-QUALITY" glory!

It's almost enough to make a turntable, a cart deck, a homebrew reverb unit, a round-pot mixing board, a CBS Audimax/Volumax, and a Raytheon AM tube transmitter the prefect line-up for providing the pinnacle of true high fidelity audio reproduction.

>
> It wouldn't (or at least shouldn't) because the decoding process would use the decoded L-R signal to recover the original L and R signals.  Remember that the C-QUAM signal is "predistorted" by taking only the PM component of a QUAM signal and then amplitude modulating it in the usual way with L+R -- which is supposed to mean that the resulting C-QUAM signal will come out okay in mono with an envelope detector, which would not be able to cope with straight QUAM adequately -- and then the decoder uses the difference between the outputs of envelope and in-phase synchronous detectors (the latter will be badly distorted because of the remodulation process) to correct the corresponding distortion in the quadrature synchronous detector (L-R) output.

That's essentially what I said in an earlier post, it isn't clear to me if you are agreeing with my point, or arguing in some way that I don't understand, that my opinion that CQUAM does not cause distortion with envelope detectors is wrong?  With single channel modulation, I believe you will get distortion using either an envelope detector, or a CQUAM decoder chip, as the demodulator, if the IF response is not symmetrical.

> Hopefully, even in an extreme case where some distortion still remains with an envelope detector, the predistortion of the L-R (PM) signal should cancel out that distortion to give good L and R outputs.

I may be missing the point of that last statement, but I think if for some reason there is distortion with an envelope detector, I don't think it will be canceled by distortion of the L-R signal.  The so called "predistortion" of the L-R signal is a whole nother matter than any distortion caused by an envelope detector, the whole purpose of the "predistortion" is to eliminate distortion on envelope detectors.

Greg or Joan <ggjn@sprynet.com> wrote:

"Which is kind of ironic.  At the 1964-65 New York World's Fair, didn't they have a pavilion with a restaurant, and the pavilion was called the "Festival of Gas"?"

I can see where that might be a problem. :-)

Getting back to radio, WRKA(FM) in the Louisville market is running a promotion (http://wrka.com/fun/givemegas2.html) where they're giving free gasoline once a week to the first 103 customers at a local Meijer store (the store location is announced on the morning drive show the day before), and the slogan is, not too surprisingly, "Jeff and Gary Give Me Gas!"

>
>Ask why anybody would want to offend you.

Ron, I've avoided this discussion until now, but I have to point out one VERY relevant issue here:  Does anyone seriously think that listeners will pay much attention to a spot while the DJ is being offensive?

Yes, he'll have his audience.  Yes, people will write letters.  But will the sponsors get effective advertising while all this is going on?

If I understand your position correctly, you seem to think that any exposure is good exposure.  What I (and others) are saying is that maybe that's not the case.  You seem to think that this is all about tweaking the bluenoses.   It's not.

Ron, there are many other ways to entertain.  You seem focussed on defending one of the slimiest ways of doing so, namely the radio announcer as obnoxious bully. I'm not suggesting that this sort of entertainment be banned, but I am saying that maybe radio stations need to consider advertising effectiveness while such behavior goes on.

I'll bet Jim Koch isn't too happy after the O&A incident. And I'll bet Orchard Supply isn't too happy about being associated with a criminal's efforts. Are they stupid customers? Or just maybe they realized something that eludes you.

The point is very basic. It's not about entertainment, it's not about offending people, it's not about anything other than advertising. So the real question is do people buy more when advertising is obnoxious? Do people who listen to obnoxious programming pay any attention to advertising? Is obnoxious behavior an effective tool?

Clearly, you seem to think it is. I'm suggesting that your conventional wisdom of any publicity being good publicity may not be what it's cracked up to be. Ask Martha Stewart if sales of her line of housewares is doing well...

Hi Folks,

As part of my "Radio Oriented" netcast on Live365.com, I thought that
I would upload a broadcast of Gary Dee from WERE Cleveland in 1974.
Gary Dee Passed away in 1995, but this was a "Mock" Funeral of Gary
Dee -- with a message, and in my opinion, one of his best works.

http://www.live365.com/stations/10164

The play list this week is:

1.) Inner Sanctum - Over My Dead Body - 47-06-23 (23 min)
2.) Escape - Three Skeleton Key - 49-11-15 (29 min)
3.) WILD 94.9 - Funeral Crematorium Prank Call (1 min 23 sec)
4.) Gary Dee WERE Cleveland "Mock Funeral" in Cleveland - March 1974 (48 min)
5.) Fibber McGee and Molly - Halloween and Gildersleeve's - 35-10/28 (29 min)
6.) The Whistler - Shadow of a Mind - 43-06-05 (29 min)

These programs will run 24/7 until Sunday 10/27/02.

While your at it, please visit the Gary Dee Tribute Web Site:

http://www.geocities.com/Area51/Station/9398/index.html

Amen and Halleluiah!
Giv'em STEEL!!

Gary Dee (R.I.P.)

# The Official Old-Time Radio (OTR) FAQ
## Frequently Asked Questions (FAQ) File for OTR (Old-Time Radio)

Last Modified: Monday, September 09, 2002

---

Copies of this FAQ are distributed quarterly to rec.answers, rec.radio.info, rec.radio.broadcasting, rec.antiques.radio+phono and other news groups; and are on file at bloom-picayune.mit.edu in the file: /pub/usenet-by-group/news.answers/radio/old-time-faq or http://www.faqs.org/faqs/
The most recent HTML-ized version is at
http://www.old-time.com/otrfaq.html

Table of contents:

Q01. What is "OTR"?
Q02. You haven't mentioned OTR music, why not?
Q03. Where can I buy recordings of old radio shows?
Q04. Which vendors have (lower prices) (higher quality) (faster response)?
Q05. Are OTR shows rebroadcast? If so, where and when?
Q06. I remember a great show called (x). When was it aired?
Q07. Are there any books about OTR?
Q08. Does anybody trade tapes of OTR shows?
Q09. What's this stuff about Copyright?
Q10. How can I get my local radio or TV station to broadcast OTR programming?
Q11. I have some old transcriptions and tapes, how can I make them sound better?
Q12. Are there any OTR clubs near me?
Q13. I have some OTR tapes of the same program, but their dates are different. Why?
Q14. Is there anywhere I can get a complete listing of all the episodes in a serial?
Q15. Is there anywhere I can get a written synopsis of the plots or themes of OTR programs?
Q16. Is there a World Wide Web page (URL) I can access for more info?
Q17. Is there an email newsletter on OTR? How do I subscribe to it?

Q18. What ever happened to the person that played [insert character] on [insert name of show]?
Q19. What is the best way to archive OTR programs?
Q20. My old reels squeak. Why does this happen, and can I fix it?
Q21. Where can I find more information about antique radios?
Q22. What is the best radio / antenna to get distant OTR stations?
Q23. Is there a group for modern radio drama ("new-time radio")?
Q24. I have only email access to the Net. Can I still get the files at your site?
Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?
Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?
Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to access your page?
Q28. I am interested in re-creating some OTR drama. Where can I get scripts?
Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?
Q30. Can I chat with other OTR fans on the internet?
Q31. Where can I buy 1970s CBS Radio Mystery Theater programs?
Q32. Is there an internet news group for old time radio?
Q33. OTR network shows were usually heard at\ the same local time, no matter what the time zone. How did they do this?
Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?
Q35. Is there any information on OTR conventions?
Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?
Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?
Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?
Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?
Q40. What MP3 player is best for OTR?
Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?
Q42. Where can I find OTR to download?
Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

---

Q01. What is "OTR"?

A01. OTR is an acronym for "Old Time Radio", a term loosely applied to radio programs broadcast from the dawn of broadcasting to the very early 1960s. Alternate names are "radio nostalgia", "golden age radio", etc. Usually this applies to radio drama, mystery stories, comedy and adventures. Some individuals classify the resurgence of this type of radio programming in the '60s and '70s as "Revival Radio", and similar programming since the '70s as "Modern Radio Drama". Purists even discriminate between the "Golden Age" (late '30s and the decade of the '40s) and the "Silver Age" ('50s). In any case, there are plenty of programs of various types that are enjoyable entertainment. Best of all, they don't require a large screen TV to enjoy 'em -- the "visuals" are provided by the listener's imagination.

----------------------------------------------------------------------

Q02. You haven't mentioned OTR music, why not?

A02. There was a good deal of big band, bluegrass, country and other music broadcast during this era. For some reason, there seems to be more current interest in the dramas rather than in the music. You will find much more discussion about this topic in alt.music.big-band or the various news groups specializing in music of various types. Bluegrass fans might enjoy the Old Time Music on the Radio WWW pages. (They happen to use the same acronym, "OTR", but are not affiliated with The Original Old-Time Radio (OTR) pages). In addition, there is a Big Band and Other OTR Music BBS at www.old-time.com/otrbbss.html

----------------------------------------------------------------------

Q03. Where can I buy recordings of old radio shows?

A03. There are several individuals and companies willing to sell tapes and CDs of OTR programs. A partial list can be obtained from the www.old-time.com site. Many public libraries have a small stock for perusal as well. Some vendors and collectors even have their own WWW pages.

----------------------------------------------------------------------

Q04. Which vendors have (lower prices) (higher quality) (faster response)?

A04. Prices, quality and service differ somewhat among all vendors. Check with other OTR fans to learn of their experiences, then check with potential vendors.

Audio quality is an important consideration when purchasing recorded tapes. As yet, there is no "standardized" description of sound quality. Jim Widner and other OTR collectors have suggested various metrics to describe the quality of OTR recordings. Discussion of these standardized descriptors is summarized at the www.old-time.com site

----------------------------------------------------------------------

Q05. Are OTR shows rebroadcast? If so, where and when?

A05. Yes, several AM and FM radio stations, satellite feeds, a shortwave station, and at least one Public Access TV station rebroadcast OTR. Check the Old-Time WWW page for current info. If you learn of other sources, leave a note!

For AM listening, try the National Radio Club's AM Radio Log, 17th Edition: Complete Listing of U.S. and Canada AM Radio Stations (Mannsville, N.Y.: NRC, 1997). All AM stations carrying things like "Old Time Radio" are listed with the format code NOS (Nostalgia), and there are lots of other codes. [Order from NRC Publications, Box 164, Mannsville NY 13661-0164 USA. Price is: $22.95 post paid]

For FM listening, try Bruce F. Elving's FM Atlas (Esko, MN: FM Atlas Pub., 1993). Alongside lists, this has maps of your area and its stations as well. [Order from Bruce Elving, PO Box 336, Esko MN 55733-0336. Price Range: $11.00 + approx. $1.00 s/h]

The M Street Radio Directory, M Street at +1 615-251-1525 voice, or +1 615-251-8798 FAX. The address is M Street Corp., PO Box 23150 Nashville, TN 37202 The price for the 8th edition is $65.00 plus S&H

----------------------------------------------------------------------

Q06. I remember a great show called (x). When was it aired?

A06. If the show was heard nationwide, look through the program databases / logs at the Old-Time site or at Jerry Haendiges' site (see answer A14 below). If the show was only on local radio, you will have more difficulty in finding an answer. Checking with your local radio stations is probably the best bet.

----------------------------------------------------------------------

Q07. Are there any books about OTR?

A07. Yes, there are many books related to OTR. See the www.old-time.com site for a bibliography of several hundred books. There is also a page where you can read or enter critiques or reviews of various books on OTR.

Jim Widner and Everett L. Slosman left this address for a bookstore specializing in OTR books:

Rainy Day Books
P.O. Box 775, Rt. 119
Fitzwilliam, NH 03447
(603)585-3448

Bob Crump reminded us that most good used book stores will do a nationwide search for a title, if given enough time. Henry Brugsch related a good experience with the following on-line bookstore:

Acorn Books acornbks@netcom.com

There are also several "book finding" services that will help obtain old/out of print books for a fee.

----------------------------------------------------------------------

Q08. Does anybody trade tapes of OTR shows?

A08. Yes. Check with the various on-line OTR services. Leave a note in the OTR Digest, alt.radio.oldtime, or Ray Plumlee's OTR Traders BBS at http://otr-trader.com/ Remember to observe copyright laws!

---

Q09. What's this stuff about Copyright?

A9. The copyrights on some OTR shows have expired. Several copyrights have been renewed, and some may have fallen under "common law" copyright (even though they were not originally copyrighted). 1970s era Berne Convention agreements further cloud the issue for non-lawyers. See the Old-Time WWW site for the latest "common sense" and legal citations.

A concise answer was given by 'A. Joseph Ross' (lawyer@world.std.com) (used with his permission):

> Just to get a little perspective in this controversy, copyrights do expire. Under the old copyright law, a copyright was good for 28 years from the date of first publication, renewable for another 28 years, for a total of 56. Under the 1976 act, those copyrights were extended to 75 years, provided they were renewed. Copyrights under the new law, which took effect on 1 January 1978, are good for the life of the author plus 50 years. Copyrights on anonymous works, works made for hire, etc. are good for 75 years after first publication.
>
> So, since otr has just barely been around for 75 years, little or none of it is in the public domain yet by reason of having been around for a long time. The question of what constitutes publication, and the fact that sound recordings could not be independently copyrighted until the new law took effect add additional complications.

---

Q10. How can I get my local radio or TV station to broadcast OTR programming?

A10. Call the station and tell them of the many people who like to listen to OTR. Suggest this programming will increase the number of listeners and help buy things from their advertisers.

Shawn Fulper-Smith (shawnf@cc1.uca.edu), a managing director of a non-commercial station, tells us:

> The days of radio being ruled by the artisans is over, and for some time now it has been in the hands of people who

> only look at the bottom line, so to reach them you must talk through public radio pledges, or through sponsors on commercial stations.

Don Fisher (dfisher@sover.net) has been successful in getting his local Public Access TV station to rebroadcast OTR. In fact, Don is the MC of the program. Contact him for hints on how to get your Public Access TV station to do something similar.

Elizabeth McLeod (lizmcl@midcoast.com), who has spent more than 15 years working in local radio, gave the following advice:

> I can tell you that one phone call from a listener means absolutely nothing to a program director. PD's are totally under the thumbs of their General Managers -- and GMs, in turn, base their decisions EXCLUSIVELY on sales issues. It doesn't matter how many people want to hear something -- if the GM doesn't think he can sell it, if the GM doesn't think it'll bring hard cash into the station, it won't get on the air. Period.
>
> The only reason a commercial station exists is to make money for its owners. ALL decisions at the station, be they about programming or anything else, are made with this in mind.
>
> Don't bother to approach the station itself, APPROACH THE STATION'S ADVERTISERS!!!
>
> Listen to the station and figure out who its biggest sponsors are. Generally, they'll be local banks, car dealers, insurance agencies, and appliance retailers. Do you know anyone connected with these advertisers? Then approach these people. Tell them you've heard their ads on such and such a station, and that you think a lot of people would be interested in hearing OTR, and that advertising on an OTR series might be a good strategy. And get your friends to do the same. And be persistent! In other words, SELL THEM ON THE IDEA!
>
> You need to keep in mind that some types of stations are more likely to air OTR than others. If your local station is has a firmly-defined format, you are probably "S-O-L," as the saying goes. They won't break format, no matter what. On the other hand, if you have a local non-commercial community-type station, way up on the left side of the FM dial, you may have a very good chance of success.

---

Q11. I have some old transcriptions and tapes, how can I make them sound better?

A11. You might try using a good equalizer and/or digital signal processing (DSP) unit between the playback and recording devices. Some people have mentioned that the Radio Shack DSP unit does a fair job. There are also other, more expensive DSP units available from Ham radio stores and audio stores. Some subscribers have attested to the efficacy of the Timewave brand of DSP units.

There are several computer programs available to convert analog sounds (as on a tape) to a digital format (e.g. WAV file). Some of these computer programs also have noise reduction, filtering and enhancement capabilities. In many cases, application of digital technology will improve the sound of a noisy or deteriorating analog tape. There is a problem, however, if the digitized rendition is re-recorded to tape, and subsequently re-digitized for further treatment. Since digitization is a sampling technique, sampling a sample can result in extremely degraded sound patterns.

A very nice program that will convert analog material to digital format is Audiotools by Andrew Fish. For more information on this software, visit the Audiotools BBS at www.old-time.com/otrbbss.html or Andrew's site at http://www.unrelatedinventions.com/Audiotools/

From: hhoward@mindspring.com (Henry Howard)

> For cassette machines (and reel to reels for that matter) occasionally take a "Y" cord and connect the output of your cassette player to both "sides" of the "Y". Plug the combined side of the "Y" into your stereo. If the sound is mush(ier) than what you hear normally, you have a head alignment problem (assuming that the tape you are listening to was properly aligned.)

From: Ron_B._Hare@livewire.com (Ron B. Hare)

> Dolby HX on the recording deck makes an audible difference. Other audio optimization features are of negligible value for OTR. Dolby HX also requires no playback decoder.

[Dolby HX uses or "preserves" the Dolby noise reduction method of the master tape when duplicating - ed.]

---

Q12. Are there any OTR clubs near me?

A12. Check the club listings in the Old-Time WWW page, and leave a note in one of the on-line OTR groups asking about local clubs for your area. If you find a club that is not listed at www.old-time.com, ask a club officer to send a note to the webmaster with particulars about the club.

---

Q13. I have some OTR tapes of the same program, but their dates are different. Why?

A13. Sometimes broadcasts are dated according to their original broadcast date, and sometimes according to a date on which they have been rebroadcast. For instance, the Armed Forces Radio Service rebroadcast many Mutual Radio transcriptions at a later date. Your tape may be of one of these later dates. Alternately, somebody might have made a mis-typopgoof.

Finally, some shows -were- broadcast more than once, and sometimes on different programs! For instance, a few Suspense shows were re-scripted / re-cast for Escape. You might also find similarities between certain SF shows as done on X Minus 1 and Dimension X.

----------------------------------------------------------------------

Q14. Is there any place where I can get a complete listing of all the episodes in a particular program series?

A14. Some on-line OTR collectors have contributed Program Logs for several well-known series. The logs are available at www.old-time.com/otrlogs/ . While you are logged in at that site, check the "Humongous OTR Database" (a database of contributed catalogs and libraries), which is searchable with your WWW browser.

The "logs and publications" entry at the Old-Time WWW site gives names and addresses of several vendors of these items (thanks to RadioJoe5@aol.com (Joe Coleman) and others).

Jerry Haendiges maintains a VERY complete set of OTR program logs, at his Vintage Radio Place: (http://www.otrsite.com/radiolog )

Jay Hickerson maintains several logs and lists, as well as -Hello Again-, an OTR newsletter. Jay is the author of The Ultimate History of Network Radio Programming and Guide to All Circulating Shows. You can see more info at http://www.old-time.com/sponsors/hickerson.html

Jay's address is:

Jay Hickerson         JayHick@aol.com
Box 4321
Hamden, CT  06514
(203) 248-2887        FAX (203) 281-1322

----------------------------------------------------------------------

Q15. Is there any place where I can get a written synopsis of the plots or themes of OTR programs?

A15. Again, some vendors include this information with their catalogs. If you would like to contribute your interpretations of OTR plots or themes, send them to the on-line OTR services or to webmaster@old-time.com for inclusion in one of the databases.

Jim Widner and others have contributed some synopses / introductions to various programs. They are on file at http://www.otr.com and http://www.old-time.com.

Also check Frank Passage's logs at the old-time WWW site; most contain a short synopsis of the program.

Many of Jerry Haendiges' logs contain excellent summaries of not only the program series, but of each episode as well.

Many of the local and national OTR clubs maintain informational libraries with this material.

-----------------------------------------------------------------------

Q16. Is there a World Wide Web page (URL) that I can access for more information?

A16. Yes, there are several WWW sites. Each site contains different information, so you might want to visit them all. The major OTR WWW sites all have links or pointers to each other, so you can explore many topical areas within old time radio. Good places to start exploring are:
www.old-time.com
or www.otr.com
or www.otrsite.com

An excellent database of OTR-related WWW sites, with an explanation of the contents of each is at
www.otr.com/cgi-bin/cgiwrap/otr/db.cgi?uid=default

-----------------------------------------------------------------------

Q17. Is there an email newsletter on OTR? How do I subscribe to it?

A17. Several newsletters currently exist. Here his how to get the best:

The Old-Time Radio Digest (AKA "Internet OTR Digest") is a very popular and freely available electronic newsletter, delivered nightly. Its purpose is to foster general discussions about the hobby of collecting, preserving and listening to OTR. To subscribe, send an email

TO: old.time.radio-request@oldradio.net
SUBJECT: subscribe
(The body of the message is ignored)

-----------------------------------------------------------------------

Q18. What ever happened to the person that played [insert character] on [insert name of show]?

A18. Check the  "Personality Pages" at www.old-time.com for home pages of several well-known OTR personalities. Also check the  Where

Are They Now pages at www.440int.com.

---

Q19. What is the best way to archive OTR programs?

A19. The most popular way seemed to be reel-reel tapes, using each of the four tracks to record monophonically. Modern reel machines are in the > $2,000 range, and used open reel machines are becoming harder to find.

Purists claim open reel tapes are best stored "tails out", in which the tape is played (not fast-forwarded) onto the take-up reel. This method of storage makes "print through" of the magnetic sound image a little less noticeable because the "echo" will come before the louder sound that caused it, and be somewhat masked by the louder sound.

Cassettes are generally fine for portability / ease of use / exchange, but they suffer from several problems when used as a long-term storage medium. These problems include "overwinding" and splitting of the tape at the leader. Because of their thinner track width and slower speed (1 7/8 IPS), the density of the information is greater than with wider and faster (3 3/4 IPS or 7 1/2 IPS) reel tapes. This leads to a greater loss of signal (particularly high frequencies) over time.

The Hi-Fi VHS tape is gaining in popularity because of its six-hour storage capability and relatively robust mechanical construction. "Hi-Fi" decks need no video signal to synch the systems, and can thus record audio without an accompanying video signal. One T-120 Stereo Hi-Fi VHS cassette can easily hold 12 hours of OTR audio (recorded monophonically on the right and left channels independently). If the linear track can be accessed independently, this will add six more hours of recording time. There is very little fidelity loss when using this medium to duplicate programs.

Conrad Trautmann (CONRADTRAUT@delphi.com) left this note in response to a query about finding used reel-reel machines:

> You can also call Harris/Allied used equipment division at 1-800-622-0022 or call Radio World magazine at 703-998-7600 for subscription information. Radio World is an industry trade and has used equipment listings in the classifieds once a month.

(Jim Blackie [jblackie@aol.com] indicates that the Harris/Allied number has changed to: 1-800-300-0733.)

From: andy@vintagebroadcasts.com (Andy Blatt)

> I wholeheartedly recommend Play It Again, Sam of Lakewood, Ohio.  They also sell used Pioneer reel decks with a warranty and accept major credit cards for repair or used machines.  The address is 12611 Madison Avenue in Lakewood,

> Ohio 44107. The phone number (no answering machine, no fax machine) is 216-228-7330. As far as pitch control cassette decks, Marantz offers several one of which is the three-head portable PMD-430.

[Play It Again Sam has a WWW page at www.playitagainsam.com - ed]

Richard Novak (rnovak@ix.netcom.com) wrote this informative note on using Hi-Fi VHS as an archival medium:

> To clear up any misunderstandings concerning VHS HiFi machines and their ability to record audio, I offer the following..
>
> It should be understood that what distinguishes a HiFi machine from a linear machine is that the audio track is recorded helically (diagonally) on the tape along with the video track. On linear machines the audio is recorded at the upper edge of the tape (and a control track at the lower edge, if anyone wonders what the extra head is for.)
>
> On a HiFi VHS the audio is not recorded as an analog signal as would be the case with linear recording. Instead the analog audio signal frequency-modulates a carrier which is then recorded between the video tracks. A duplicate signal is also recorded linearly to maintain compatibility with linear VCRs. The FM signal recorded on the HiFi track should not be confused with FM radio broadcasts. One of my customers thought the FM switch on his HiFi was for recording FM from the radio. Today's machines no longer use the label "FM", instead use "HiFi". Less confusing.
>
> The sound recorded from FM radio broadcasts (or any other source) onto HiFi VCRs is virtually indistinguishable from the source. The material can be dubbed to cassette with no generation loss.
>
> There is no difference in audio quality using either six hour or two hour mode.
>
> It is true that at slower speeds the diagonal tracks are closer together. This does degrade the video signal as anyone knows who has compared six hour video with two hour video. But does not degrade the FM carrier with the audio track.
>
> The tape writing speed of the audio track in HiFi mode is the same regardless of linear speed. This is because the head speed remains constant and is independent of the linear tape speed.
>
> Worked it out once and it is around seven meters per second. Whatever it is, it's a whole bunch faster than 7 1/2 inches per second. If anyone really wants to know the writing

> speed, it is the circumference of the upper cylinder (or video head) multiplied by the rotational speed which is 30 revolutions per second, or 1800 revolutions per minute. (Two heads 180 degrees apart at thirty rps results in 60 frames per second.)
>
> Who cares how it works.. The point is that VHS HiFi is the best and cheapest medium around for recording masters. But not for archiving. Most experts still agree that reel to reel is the best and most reliable method of archiving. (Sticky shed syndrome from the 70s notwithstanding.)

Although Bob Burnham does not like dubbing (two-well) cassette decks for producing highest-quality cassette tapes, he does have a few recommendations:

> One of the BEST dubbing decks (if you must use one) is made by Denon. Both sides can record at the same time and both sides have pitch control, and both sides have separate output jacks for connecting to other equipment.... almost like TWO (click) TWO (click) TWO DECKS in one. Tascam (Teac's pro division) also recently introduced their model 303 double deck. If it's anything like the 202 MKII, it's probably not worth it. You pay a high price for the name, but still basically consumer grade inside and lots of plastic. Denon is better.
>
> I mentioned Kingdom Tapes in Mansfield, PA as a good source for cassette copiers, and equipment servicing. All the duplicators I have in use today came from this company. They have all the major brands (plus their own house brand), also tape decks, blank cassettes, etc. Great service (same day usually available). They'll beat anyone's price on cassette dubbers. 800-788-1122. Fax is 717-662-3875.
>
> Bob Burnham / BRC Productions / P.O. Box 2645 / Livonia,
> MI 48151 platecap@gatecom.com / platecap@eworld.com

Several hobbyists are now investigating the utility of using CD-ROM or MiniDisks for archival purposes. CD-ROMs can hold hundreds of hours of program material, but at the cost of time-consuming conversion from analog to digital representations. Selection of appropriate encoding and compression technologies is extremely important to prevent digital artifacts. MP3 (MPEG III) compression seems to be more favored than is RealAudio(R) compression.

----------------------------------------------------------------------

Q20. My old reels squeak. Why does this happen, and can I fix it?

A20. There are at least two causes for "squeaky reels" on a reel-reel tape recorder. (1) The tape edge may be rubbing against the rim of a distorted take-up reel, or (2) the oxide may be sticking to your erase (or other) heads. If the former, the least frustrating alternative is probably a new take-up reel. If the latter, Fred Korb left this note:

> If you have any squeaky reels that you would like to recover, I will be glad to send you more information on how to do it. Just send me a stamped self addressed # 10 envelope and I will respond. Send your request to: Fred Korb, c/o Oldtime Radio Collectors and Traders Society, 725 Cardigan Court, Naperville, Illinois 60565-1202. I am willing to help you preserve the sounds of radio days gone by.

[Editor's note: Fred's method consists of a kit by which a lubricating film can be automatically applied to the tape as it is played. I tried it. Although temporary, it does indeed work! I'd recommend it for those squeaky tapes that you wish to re-record onto newer reels.]

----------------------------------------------------------------------

Richard Fish (lodeston@bluemarble.net) also left this helpful info about an alternative method:

> HYRDROLYZATION is the culprit. The tape material -- the backing, or the binder compound used to stick the magnetic particles to the plastic backing -- has absorbed water from the air. The water molecules actually make the tape expand a bit, so it doesn't fit the machined tape-guides properly anymore; and they can interfere with the lubrication impregnated into the tape; and it is theorized they can even interfere with the polished smoothness of the tape surface.
>
> WHY SOME TAPES AND NOT OTHERS? It depends on the formulation of the plastic backing and binder. In the mid-70s, both 3M (Scotch) and Ampex, the two major tape manufacturers, started experimenting with their formulas. They thought they were introducing major improvements, but instead created a tape much more prone to hydrolization than anything had ever been. The problem did not show up for years, and the formulas did not get corrected until sometime in the mid-'80s. Theoretically any tape could get hydrolyzed over a long period of time, especially if stored in a high-humidity situation, but in practice most squeaky tapes were made (roughly speaking) between 1975 and 1985.
>
> WHAT'S THE FIX? Tom Lopez at ZBS (the most prolific and entreprenurially successful producer of radio drama in the US today) gave me his formula and I've done it many times now and it works:
>
> Bake the tapes in a convection oven for 8 hours at 130

> degrees Fahrenheit. It is entirely possible to bake a tape twice if the first time doesn't do the trick. You get about a three-week "window", sez Tom, before the tape starts to re-absorb water. So the best deal is to bake the tape and immediately make a copy. But if you forget to do it and it re-hydrolyzes, you can bake it again.

---

Q21. Where can I find more information about antique radios?

A21. An excellent place for discussions about antique radios, phonographs and accessories is the rec.antiques.radio+phono news group, created by Bill Robie. A pointer to his FAQ may also be found at http://www.old-time.com. Basically, r.a.r+p

- Is a *discussion* group, rather than a sales group (see r.a.m) - Focuses on radios, phonos, and related materials made before the 60s - Avoids "ham" radio gear (the Boat Anchors group covers that) - Has a -very- comprehensive FAQ that new folks should read

The University of Maryland has a WWW site entitled "Broadcast Pioneers' Library". This is an excellent resource for the serious / professional researcher. It can be accessed through the old-time WWW site, or directly via the URL: http://www.lib.umd.edu/UMCP/LAB/

Additional sites with pictures of old radios or other hardware resources may also be found at http://www.old-time.com

---

Q22. What is the best radio / antenna to get distant OTR stations?

A22. Several readers have been acclaiming the GE SuperRadio III as an excellent choice for picking up distant AM stations that carry OTR programming. Although the tuning dial has notoriously poor calibration, the sensitivity and selectivity seem superior to other radios.

Some readers have had good success with the Select-A-Tenna antenna advertised in several magazines, and the Grove Catalog. The S-A-T seems to be rather directional, and may eliminate off-axis interference.

Ham Radio magazines sometimes carry information about small loop antennas for AM DX-ing. Some pointers to instructions on how to build them are at http://www.old-time.com. Also, Dan Hughes (dan@soltec.net) left this note:

> Several years ago one of the electronic magazines ran plans with dimensions and number of turns, etc to build one of these antennas. I have built several and I'm no mechanic. If you (or anyone else reading this) would like a copy of the article and plans, visit my website at http://members.soltec.net/~dan

---

If you are interested in AM Broadcast Band reception, and technical articles related thereto, send a SASE to the following address for their product catalog:

National Radio Club
Publications Center
PO Box 164
Mannsville, NY  13667-0164

(The National Radio Club also has a WWW page, at www.nrcdxas.org/)

---

Q23. Is there a group for modern radio drama ("new-time radio")?

A23. There are several USENET groups whose charters include modern drama. Check the lists on your local Internet provider to see which are available to you. Here is a list of some of the WWW pages for radio drama (more may be found at http://www.old-time.com):

| | |
|---|---|
| Atlanta Radio Theatre Company: | www.artc.org |
| ZBS Media | http://www.zbs.org/zbs.html |
| LodesTone Productions | http://www.bluemarble.net/lodeston/lode.html |
| Midwest Radio Theatre Workshop | http://www.mrtw.org/mrtw |

---

Q24. I have only email access to the Net. Can I still get the files at your site?

A24. Maybe. WWW pages can be retrieved by email. Get the following file for more information:

Accessing The Internet By E-Mail
Doctor Bob's Guide to Offline Internet Access

This document is now available from several automated mail servers.

To get the latest edition, send e-mail to one of the addresses below.

To: mail-server@rtfm.mit.edu (for US, Canada & South America)
Enter only this line in the BODY of the note:
send usenet/news.answers/internet-services/access-via-email

To: mailbase@mailbase.ac.uk (for Europe, Asia, etc.)
Enter only this line in the BODY of the note:
send lis-iis e-access-inet.txt

Since the OTR FAQ is an "official" FAQ, a copy of it is stored at MIT, and is available from the MIT mailserver. For more info on how to get files by email from MIT, send a message

```
     TO: mail-server@rtfm.mit.edu
     SUBJECT: [blank]
     BODY:
          help
          end
```

---

Q25. I have never heard "Old Time Radio". Can I get an audio sample via Internet?

A25. Yes, if you have a suitable WWW browser and sound card. Connect to any of the WWW sites mentioned above, and follow the pointers to their audio clips and / or soundbytes. Many of the soundbytes can be downloaded, and played on your computer's sound card, others will play "realtime" through your multimedia system. There is also a news group, alt.binaries.sounds.radio.oldtime, that tries to transfer OTR shows (news groups are notoriously inefficient at transferring large binary files, however).

You can select from many moderate-length soundbytes at Jerry Haendiges' Preview Listening Lounge at www.otrsite.com/ra/preview.html

---

Q26. I have lots of loose OTR cassettes filling my drawers. Is there a better way to store these things?

A26. Collectors with lots of cassettes seem to use just about everything from "underbed cardboard storage boxes" to old soft drink cases. If you want your collection to have a more "professional" look, here is a note from Ron_B._Hare@livewire.com (Ron B. Hare)

> You almost need to buy cassette albums from specialty suppliers. Radio Shack used to carry a small line of these and charged too much. We are in the recording studio business, and receive catalogs from several sources. The one I like best has some of the lowest prices and unhesitatingly deals with individuals and will take your credit card number over the phone for instant shipment (in contrast to some who require account setup, purchase orders, prepayment, cash and other nuisances).
>
> They have two catalogs: one for audio and one for video. Cassette albums are available in a large number of different styles, sizes and capacities. The 8-cassette albums I use are CPCN.4+4M/WHT in white and CPCN.4+4M/RBLU in royal blue. Outside dimensions are 9 7/8 x 7 x 1 1/4 wide, so they fit well on a bookshelf. This model also seems to cost less per cassette than any of the other models, though logic might lead you to the conclusion that

> the larger capacity ones would cost less.

[Polyline has a website at www.polylinecorp.com, and their new address and phone number are:

Polyline Corporation
1401 Estes Ave.
Elk Grove Village, IL 60007]

---

Q27. All this new software is a bit difficult for me to use, as I am blind. Can you give me any assistance on how to read your page?

A27. Yes. Although my WWW page is best viewed with Netscape or Microsoft Explorer, most pages render well with LYNX and associated reader software.

Blind visitors who depend on DOS-based software to access the net, or who use a reading program to audibly display their computer's output might be interested in a program called "Nettamer". The Nettamer home page is at www.nettamer.net/

---

Q28. I am interested in re-creating some OTR drama. Where can I get scripts?

A28. Check your local or national OTR clubs. Many have a "print library" that includes scripts. You can also point your browser at the University of Maryland's script page, at www.lib.umd.edu/UMCP/LAB/scripts.html

Jack French (OTRpiano@erols.com) said:

> One excellent source is the book. "One Hundred Non-Royalty Radio Plays" compiled by William Kozlenko, Greenberg Publ of NYC 1941. It's certainly out of print now, but many libraries would have a copy. I bought mine at a used book store a few years ago. The 100 radio plays in the book include adventure, mystery, fantasy, comedy and historical. Most were originally produced on educational stations in the 30s. Authors include Saroyan, Julian, and Liss.

Larry Groebe, of the Generic Radio Workshop, has several pages dedicated to on-line OTR scripts at http://www.genericradio.com

---

Q29. I can hear what sounds like another program playing in the background on many of my OTR tapes. Is this due to the tuning on the old radio or to the tape recorder that recorded the program?

A29. In addition to the old radio being mistuned, similar problems can be caused by one or more of the tape recorders used before you received your copy of the program. Print-through has already been mentioned in Q & A 19. Bob Burnham has a nice explanation of two more problems: crosstalk and channel leakage.

Crosstalk and Channel Leakage are 2 different things. OTR collectors seem to have the most problem with channel leakage.

When you hear another program faintly playing in the background in normal direction, this is usually Channel Leakage. This is a leftover problem from the 1970s & early '80s when most collectors traded on open reel tapes which were quarter-track mono -- there were different (separate) programs on left & right channels. This allowed 6 hours of shows to be placed on one reel. Unfortunately, many collectors would duplicate L & R shows simultaneously. Depending on the quality of the equipment (and its condition) it was common for one program to bleed into the opposite channel...especially if the collector was careless and allowed over-modulation.

Crosstalk results when a tape is recorded (or played back) on a machine with mis-aligned tape heads.  It can also occur when trying to record over a 1/2 track recording with a 1/4 track machine with dirty or mis-aligned erase head.  You usually will hear another program playing IN REVERSE in the background.

HOW TO PREVENT CHANNEL LEAKAGE AND CROSSTALK...

If duplicating quarter track reels, copy ONE channel or track at a time. As for crosstalk, make certain your machines are kept in proper alignment. Use a high quality BULK ERASER if you re-use old tapes... this is especially true for those who use reels.

Sorry, there is NOTHING you can do to remove these flaws once they are there.

---

Q30. Can I chat with other OTR fans on the internet?

A30. Yes. Lois Culver (lois@chatlink.com) and other OTR fans meet every Thursday at 8:00 PM Eastern time, on Channel #OldRadio, on the StarLink-IRC. If you are unfamiliar with Internet Relay Chat, please get software and instructions from your favorite Internet Service Provider or shareware/freeware software site, or connect to www.old-time.com/irc.html for basic instructions.

---

Q31. I'm looking for copies of old "CBS Mystery Theatre" radio programs, primarily from the 1970s era. Does anyone know where I can call or write to obtain such items? I'd like to purchase a complete set if possible.

A31. Jack French (OTRpiano@erols.com) left the following information:

> You most certainly do not want a complete set of this series, because you couldn't afford it. There were 2,970 shows aired so even if you could find them for a buck an episode, you'd have to cough up three Gs. The series ran from 1-6-74 to 12-31-82 and since it came so late in radio history, every episode was recorded by somebody. All episodes are still copyrighted, and CBS enforces their copyrights. Therefore no dealer is going to list them, and collectors are reluctant to sell or rent them. Your only hope is to find some way to get copies in a fashion not in violation of copyright law.

Editor's note: By my count, there were about 1400 different CBSRMT shows. The rest may be duplicates.

---

Q32. Is there an internet news group for old time radio?

A32. Yes. alt.radio.oldtime is available via some news servers. Since many news servers ignore alt.groups, you may need to contact your ISP to get that news group listed locally. See www.old-time.com/newsgroups.html for more information. Also try www.groups.google.com to sample some of the messages.

---

Q33. OTR network shows were usually heard at the same local time, no matter what the time zone. How did they do this?

A33. Two ways: Many networks used telephone lines to carry the show from the studio to transmitter sites. The show was done live at least twice - once for the East coast, once for the West. After Bing Crosby spearheaded the introduction of recorded shows (about 1948), the East coast show was recorded for later telephone transmission to the West coast.

---

Q34. I'd like all the information there is about [insert name of OTR show]. Is there a FAQ that covers all the shows ever on the radio?

A34. No. There are many books (Remember them? They have words printed on pieces of processed dead tree) written about what we now call "OTR". See answers A7 and A37. If you would like to contribute an original article about one or more facets of OTR, many of the webmasters of on-line OTR sites would be happy to consider archiving it.

---

Q35. Is there any information on OTR conventions?

A35. Yes. There are several. Here are some of the larger ones:

- Annual OTR and Nostalgia Convention in Cincinnati, OH (April)

- Radio Classics Live, Brockton MA (May)
- Annual Lum and Abner Society Convention (June)
- REPS Radio Showcase (June)
- Friends of Old-Time Radio (October)
- SPERDVAC (November)

See the convention page at www.old-time.com for specific dates and contact person info.

---

Q36. Are there any WWW Bulletin Boards where I can post OTR questions and read OTR information?

A36. Yes. Try Old Time Radio Bulletin Boards at www.old-time.com/otrbbss.html. That page contains a list of several old-time radio oriented WWW bulletin boards. You can also access OTR message boards at http://www.lofcom.com/nostalgia/phorums/

---

Q37. I would like to find recordings of [fill in rare OTR show name]. I have seen the show mentioned in Jay Hickerson's book, but haven't seen the show in any of the paper or on-line catalogs. How do I get this show?

A37. Jack French, an expert on old-time radio and editor of Radio Recall, gives us this information:

> There's good news and bad news....the good news is if Jay's compendium says they are in circulation, somebody has them. The bad news is there is no guarantee you'll find them. Let's start at the beginning. If they're in Jay's book, and there is either the initials of a dealer, log preparer, or collector with that entry, the assumption is that person has some or maybe most. If the entry is devoid of such, we push on. Few dealers list rare shows in catalogs since so few people want to buy them. Generally the catalog represents a small part of a dealer's or collector's total holdings. There are at least forty OTR dealers in the country so you can contact each one with a specific inquiry. Most collectors belong to at least one OTR club. There are about 20 clubs. Most will publish your request in their newsletter for little or no cost. Most of the members of OTR clubs are not on-line so this is the only way to reach them. There are over 25 state and college archives that may have the shows. Most have no catalog but will answer any reasonable inquiry. Contact them all. All of the contact addresses for OTR clubs, pubs, dealers, and archives are contained in NARA OTR Source List. Contact me separately if you're interested in this low-cost research aid.

---

Q38. I see a lot of OTR MP3s on the WWW. Are these worth collecting? How about the OTR CD-ROMs being offered on the WWW, are they worth the money?

A38. Just as with home made recordings of any type, the quality of OTR MP3s varies considerably. Some of the online MP3s may have been converted from low sample rate RealAudio(tm) files, others might have been "ripped" from low-generation masters. Most CD-ROMs for sale on the WWW were recorded using these varying-quality MP3s. In other words, the MP3s in themselves are "collectable" only for the enjoyment one might get from listening or further trading. They have little intrinsic value, and are of unknown quality. It might help to associate your estimate of quality with the provider's name, to attempt to predict quality and avoid long downloads of poorly prepared material.

Another point to remember - some OTR is still under copyright protection. Please observe applicable copyright laws.

---

Q39. Were any of the old-time radio personalities interviewed recently? Where can I find these interviews?

A39. A large number of OTR personalities were interviewed by the author John Dunning. Stewart Wright, Editor of the RHAC Newsletter gave us the following information. (You can learn more about RHAC by checking their page at http://www.old-time.com/sponsors/rhac.html)

> The Radio Historical Association of Colorado (RHAC) has tapes of many OTR personalities interviews that were conducted by John Dunning in the 1980's. Several Radio personalities such as Elliot Lewis were interviewed more than once. The following is a fairly complete list of the Dunning interviews in the RHAC library.
>
> Steve Allen, Elvia Allman, Eve Arden, Hy Averback, Parley Baer, Parley Baer and Georgia Ellis, Parley Baer and Sam Edwards, Parley Baer and Whitfield Conner, Bill Baldwin, George Balzer, Harry Bartell, Andre Baruch and Bea Wain, Court Benson & Grace Matthews, Bernice Berwin, Mel Blanc, Ray Bradbury, Curley Bradley, Frank Bresee, Candy Candido, Hal Cantor, Charles Collingwood, Whitfield Conner & Haila Stodd, Whitfield Conner and Parley Baer, Whitfield Conner and Virginia Greeg, Norman Corwin, Mary Jane Croft, D Day Program J Macvane & Lar, Dennis Day, Rosemary De Camp, John Dehner, Kenny Delmar, Jerry Devine, Howard Duff and Dick Joy, Richard Durham, Ruth Duskin Feldman, Sam Edwards, Sam Edwards and Janet Waldo, Alice Faye, George Fenneman, Morton Fine, Al Flanagan and Dick Mcdaniel, Paul Frees, Fred Friendly, Alice Frost, Art Gilmore, Roberta Goodwin (Bob Bailey's Daughter), Gale Gordon, Virginia Gregg, Virginia Gregg and Whitfield Conner, Phil Harris, Clarence Hartzell, Dennis Horseford, John Houseman, Bill Idelson, Raymond Johnson, Jack Johnstone, Jim Jordan, Dick Joy, Roland Kibbee, Sheldon Leonard, Phil Leslie, Larry Lesueur, Elliot Lewis, John Macvane, Fletcher

Markle, Fletcher Markle, Grace Matthews & Court Benson, Dick McDaniel and Al Flanagan, Dick McDaniels and Pete Smythe, Marvin Miller, Shirley Mitchell, Carlton E Morris, Morris Kaplan, Frank Nelson, E Jack Neuman, Nelson Olmstead, Vic Perrin, Michael Raffetto, William N Robson, Eric Sevareid, Anne Seymour, William L. Shirer, Penny Singleton, Pete Smythe Collegiate Band, Olan Soule, Berne Surrey, Glenhall Taylor, Irene Tedrow, Cliff Thorsness, Les Tremayne, Lurene Tuttle, Veola Vonn, Janet Waldo, Gertrude Warner, Peggy Webber, Anne Whitfield, and Dr. Paul Winchell.

The Radio Enthusiasts of Puget Sound (REPS) also has interview tapes of many Old-Time Radio personalities. Most of these interviews have been conducted in the 1990's. Personalities include:

John Archer, Harry Bartell, Frank Buxton, Chris Conrad (Son of William Conrad), William Conrad, William Conrad & George Walsh, Stewart Conway, Norman Corwin, Sam Edwards, Herb Ellis, Charlie Flynn, Jim French, Sandra Gould, Burl Ives, Peggy Jordan (Granddaughter of Jim & Marian Jordan), Merrill Mael, Jo Anna March, Les Tremayne, Janet Waldo, Anne Whitfield Phillips, Rhoda Williams, and Douglas Young.

The REPS web site is located at:
http://www.homestead.com/repsonline/index.html

Yesterday USA on the Internet is doing a series of live interviews with OTR personalities about one every two weeks. They start at approximately 8 PM (ET) on alternate Sundays and are about 1 hour in length. The interviews are conducted by John or Larry Gassman. So far they have done Harry Bartell, Herb Ellis, and Conrad Binyon. Listeners can call in questions.

You can find out more information on upcoming interviews by going to the YUSA Home page at http://www.yesterdayusa.com/

----------------------------------------------------------------------

Q40. What MP3 player is best for OTR?

A40. MP3s can be played on most computers, memory (RAM)-based players, hard-drive players, and CD-ROM based players. Each player has advantages and disadvantages. A chart comparing various CD-ROM players for OTR playback suitability is at www.old-time.com

----------------------------------------------------------------------

Q41. I keep reading/hearing about the LOC hoarding a bunch of unreleased OTR episodes. Is this true? How can I get them?

A41. The Library of Congress (LOC) does indeed store copies of many old-time radio shows. Any qualified person can access this material, or even get copies. There are, however, some restrictions on its use. Elizabeth McLeod (lizmcl@midcoast.com), who has done much research in the area, gives us this information:

LOC material may be listened to at no charge at the Library's Recorded Sound Reference Center by "qualified researchers" working on a project intended for public distribution -- from a full length book to an article for your local OTR newsletter. You cannot, however, make copies of the material due to the contractural and copyright restrictions which the Library is required by law to observe. (While the LOC preserves and houses the material, it doesn't own it.)

It is possible, though, to obtain copies of the material from the LOC by going thru a process which is neither fast nor inexpensive. But if you have the patience and are willing to spend the money for material you can't get any other way, here is what you do:

1. Locate the specific item in the LOC's SONIC database, accessible from the Recorded Sound Reference Center Homepage, http://lcweb.loc.gov/rr/record/

2. Make note of the LOC Call Number and description of the item you need.

3. Phone, fax, or email the Recorded Sound Reference Center with the items you are requesting -- contact information is available on site. The Reference Librarian who handles these things is Brian Cornell.

4. The Library staff will determine what legal permissions will be required in order to copy the items you want, and will contact you with the names and addresses of the people who must be approached in order to get these clearances. If the item is from the NBC Collection, you will need to clear rights with their Intellectual Property Department in New York. Additional clearances may be required if the program is under a separate copyright.

5. You must write to the people specified and ask permission to have a copy made. It's a good idea to specify why you need the copy -- and don't just say "because Joe Blow is my favorite radio comedian." If you don't have a professional-sounding reason, make one up.

6. Wait to hear back from the Legal Entities. If you've written to NBC Intellectual Property, you will get a letter back from them in about four weeks. Two copies of a legal contract will be enclosed, specifying what you may and may not do with the recording. Sign both copies, and send one of them back to NBC.

7. NBC will advise the LOC that it has granted permission, and in about three weeks you will get back a requisition form from the Library's Phonoduplication Lab. You'll need to check it over, sign where specified, and send one copy back to them with

your check for the lab fee -- which starts at $86 per hour, not including the cost of tape stock. Then, fax the other copy of the form, and a photocopy of your check to the lab, and they'll begin processing your duplication request. (Yes, the fee is outrageous -- but there are worse places to spend your money than with the entity which has done more for the physical preservation of broadcasting history than any other organization in the United States....)

8. In about four weeks, FedEx will deliver your tape. Needless to say, you may not make any commercial use of the recording in whole or in part -- and you had to sign a contract to that effect in order to get access to it. Commercial permissions are a whole separate case.

Like I said, this is not for everyone -- but if you're working on a serious project, it can be a valuable resource for getting access to material that simply isn't available anywhere else and which is unlikely ever to be released on the commercial market.

Elizabeth

---

Q42. Where can I find OTR to download?

A42. The number and location of FTP sites that provide OTR changes more rapidly than does this FAQ. Your best bet is to check the backissues of the various alt.binaries.sound(s).radio.oldtime groups on USENET.

Hint: point your browser to www.groups.google.com and try your search from there

---

Q43. I bought some CDs with OTR MP3s. Some of the programs sound pretty bad. Why is this, and how can I make them sound better? If I make an audio CD from the MP3s, will it be better?

A43. Wow. The answer to that question could fill a whole FAQ by itself. I'll try to keep it short.

Poor-sounding audio can be due to several causes. The audio on the tape from which the MP3 was made could have been poor, or the person that converted the analog audio to digital audio could have done a bad job. The statement: "remastered to digital audio" doesn't mean much, if the person doing the remastering does not pay attention to enhancing the source material.

MP3 and other digital compression techniques are lossy. That means the encoding process throws away data in order to make the file smaller. Although digital copies may not have noticeable loss, re-encoding, or encoding in a different digital format will lose even more data. Example: If somebody took a 32/22 MP3 and encoded it as a

64/44, it would sound no better than the 32/22, since data was lost in the original encode. Similarly, making a 128/44 MP3 out of an old, high-compression RealAudio(R) file would not improve the sound. The advantage to the higher bitrate is the possibility that the new encode will play in a larger number of MP3 players.

Some people record their RAs or MP3s onto cassette, and then trade the cassettes. At some time in the future, somebody else might try making an MP3 from the cassette. This analog - digital - analog - digital conversion results in a very quick deterioration of the sound because of the lossy compression I mentioned before. The new encode is a "sample of a sample". The sound deteriorates much more rapidly than does the "generation loss" experienced when duplicating tapes.

How can one tell if an MP3 was originally made with a high bitrate, or merely upsampled to a high bitrate? Listen to it, and compare it with a low bitrate sample. After all, the objective is to get as good an audio rendition as possible.

Lets not limit the discussion to commercials.

The producers don't care about anything that sounds realistic, have quality,
or sounds good.

I don't think you grasp the concept of competition. Most radio, TV and
commercial webcasters don't usually share internal information with
each other.

Which of the 9 other webcasters is going to be willing to step aside
to let the 10th play a song? They're there to compete.

Can you imagine WPLJ, New York, calling WHTZ, New York, to tell them
not to play a song because they're playing it? Ain't gonna happen.

WJR booms into pretty much ALL of Northeast Ohio.  In my old home area of Akron, it stops the car radio scan more reliably than some locals in the Akron area! (Of course, like WJMP/1520, the 1 KW pea-shooter in Kent...)

WJR seems to do somewhat better in the Akron area than CKLW, just 40 KHz and a few miles away... I used to be a regular on a syndicated computer talk show which aired on CKLW, and my parents back in Ohio kept listening through static every Sunday to hear it.

Mike :)

On 24 Oct 2002 14:29:21 GMT, "Andy Wells" <aw@NOSPAMandywells.com>
wrote:

>New Radio Show For The ' Net Generation

>Bring the world of the web and technology to your listeners each week with a fun and energetic 1-hour radio show.

First: what is the "net generation?" In the US all generations appear to be using the net. In fact, older demographics find it an inexpensive way to keep in touch with their families. Radio stations in the US are going to want you to specify the demographic target of the show, not some gobbledygook "Net Generation."

Second: Most slots on stations interested in this kind of show will want 2 hours. 1 hour shows don't fit well on most talk stations. Music stations are unlikely to break format for a talk show, let alone one with an Australian accent and focus.

>* Great Host and co-host, who deliver relevant content you'll want to listen to.

Relevant to whom? Your pitch here should be to Program Directors. They'll want to know if listeners will pay attention. What a PD wants to listen to is irrelevant. He or she is going to want to know what appeal it'll have to listeners. If you're in Australia how will you know the US market? What if you discuss software that's not available here? There's also a lot of software available here that can't be exported. What will that do to your Australian stations?

Come to the US and listen to talk stations that promote "local" hosts who are hundreds of miles away and have no feel for the "local" market. They mispronounce street names and the names of politicians being led off to jail. Boston is a great example. One talk station has a "local" host who lives and originates on Long Island, New York. I'm a former Bostonian who loves to listen to someone who might as well be originating on Uranus.

>* Your local ads, your local sponsor.

>* Sounds like your station - We're not music programmers, load the segments into your system, and add your own music.

That's a lot of heavy lifting for what will be a weekend show. A production person and a Music Director will have to be assigned to find music that fits the format and times out to the hour. Your segments will be inflexible. Stations generally want to receive a CD they can rip into their audio systems in one piece. If they wanted to do a lot of production, they'd do the show themselves and be able to modify the talk segments so music selection is easier and matches the station's format, not chosen strictly based on the needs of timing.

As a programmer I have more important things to deal with than piecing together a weekend show. The production time required exceeds the length of the show.

Will your jock/announcer delivery be compatible with all the possible formats? Will geek-talk appeal to older demos? Will real American

English appeal to geeks? Will Australian English appeal to anyone except those fascinated by crocodile hunters.

Frankly, you'll be wiped out by the likes of David Lawrence's "Online Tonight," Dave Graveline's "Into Tomorrow" and Kim Kommando that come either live or completely packaged. They also speak English in a country where "barbie" is a kid's doll.

> of housewares is doing well...

It depends on the show's demographic.  Offending ``people who know
everything about morals'' appeals to young audiences.  If the sponsor
wants that demographpic, then there it is.

Actually it appeals to all ages but the sort of offense has to
be more subtle as you go up in age.

As for Martha Stewart, she could have and maybe still can recapture
her sales by making fun of herself, or letting it happen to her
on her sponsorship.

She's let technical offense be framed entirely by uptight officials.
All she has to do it reframe it.  There's lots of economists on her
side, by the way.  The toppling of the uptight is attractive.

The stereo subchannel actually is transmitted by an FM process.  After the

stereo subcarrier and pilot are recovered in the receiver with an *FM*
detector, the subcarrier is further demodulated by a (synchronous) AM
detector to produce the L-R source for de-matrixing with the main channel
into discrete L&R.

Using FM to transmit the L-R subcarrier improves the noise performance of
the channel.

Hello-
  I'm looking for anyone who might have recordings of
WGRD - Grand Rapids, Michigan. I'm looking for recordings
from 1980 and prior. Drop me a line and i'll send a list of recordings

that I have.
     Thanks, Chris

It seems that more and more traffic light signals are switching over from regular incandescent bulb designs to the new LED-type design, where an array of dozens of closely spaced red, green, or amber LEDs forms the "light".  This saves energy, lasts longer, and provides a brighter color -- but at the expense of generating an annoyingly high amount of AM radio interference to anybody who might have their car radio tuned to the AM band when driving past one of these signals.

It is thankfully(?) contained to a small area just underneath the signal itself, but nevertheless, reception of all but the strongest AM stations is momentarily plagued with a loud hiss and/or buzzing noise, an effect I have noticed on *all* car radios, regardless of how good or how poor their AM tuner section is.  Some traffic signals only use LEDs for certain colors, for example green and amber using LEDs and red using regular light bulbs, in which case only the colors that use LEDs generate the RFI -- so you might not only see the light turn green, you may also *hear* it turn green because of the static on your car radio!

There is no reason why car radio listeners should have to accept this, as regular traffic lights do not generate any radio interference (at least no more so than the power lines around them), and I have actually come across a few LED traffic signals that are nearly noise-free, perhaps due to superior design and installation, with better shielding and grounding of the offending circuitry.

So far I have contacted five different manufacturers of these LED signals with absolutely no response -- not even a cut-and-paste courtesy reply.

I then contacted the FCC regarding this issue any my lack of response from the manufactuers, and I only managed to get a cut-and-paste reply from them that just contained a few standard tips for dealing with household RFI (from dimmer switches, etc.).

Finally now, I contacted the RFI department of the local power company and they said that while they are aware of the problem with LED traffic lights, it is out of their control.  They also mentioned that they are actually giving incentives for the installation of LED-type traffic signals, because of the energy savings they provide.

Furthermore, I have mentioned this problem several times in this and other radio-related Internet discussion groups with little to no response.  Does nobody listen to AM radio in their car anymore?  If so, there are quite a few top-rated AM stations that must wondering where all their ratings are coming from.  And this problem is not limited to my area of New Jersey, as I have driven past RF-noisy LED traffic lights in numerous states, and with the power company incentives, their popularity is only going to increase, much to the displeasure of AM radio listeners.

I'd say AM radio stations would be wise to look into this.  The band already has enough to deal with, especially for on-the-road listening, that we don't need to have it wiped ou{{SSSSSSHHHHH}}ime you drive underneath a traf{{SSSSSSHHHHHH}}nd have that moment of audio clobbered by the hiss/buzz noise from the LEDs.

>Why is it that almost all commercials on FM sound so bad these days?

Man, I sure agree! But we often don't have any choice. The commercial radio business relies heavily on spot clearinghouse companies that gather thousands of commercials and then send them on to client stations.

The business used to rely on mailed and couriered reel tapes. Then DGS did a good job distributing spots over proprietary dial-up modems at slower-than-real-time rates overnight. Sound quality was pretty darn good.

Now everybody makes you retrieve spots from a website and there are whistles and all sorts of contamination of the sound.

They are also installed as stop lamps in Buses/trucks, I haven't noticed any noise here.   I don't think the LED would produce noise, they run on DC.  Possibly the power supply for them is generating the noise, the manufacturer of the big aluminum box below the light should be contacted.

[ Moderator's Note: Some auto manufacturers are also using LEDs in their taillights, particularly Cadillac in some of their higher-end vehicles. I wonder if this fits into the puzzle somewhere. ]

I'm going to a wedding in Laurel, Maryland (or thereabouts :) -
leaving this evening and coming back tomorrow evening - and will not
have computer access. During that time, I (obviously) won't be around to
post RRB submissions.

Hey Dave,

I saw you post about poor audio quality in commercials, so I thought I'd bend your ear while you're here.

Question: The "goal post" tower at I-495 and Lee Highway in Fairfax ( 38� 52' 28" N 77� 13' 24" W ).  I know that both WJZW and WJFK are diplexed on this tower, but I notice a horrible spur on 107.5 FM that sounds like some horribly over modulated combination of the two.  This causes LOTS of noise on WTOP-FM and even prevents radio "scan" from locking on to WRQX at 107.3.

First, what is causing this spur and second, is someone at WJZW or WJFK aware of the problem and working to correct it?  I've noticed it on and off for the better part of a year.

Thanks and Best,

Jeremy Powell

```

There are any number of reasons, but here are the most likely.

1) MP3 delivery. It's getting better, in that I know that I'm recieving more commercials that are encoded at rates of 192 and up, but there are still a number of facilities delivering MP3 commercials at 128 and BELOW.

2) Automation/Mass Storage. The problem of iffy MP3's is only compounded when they are loaded into automation systems that use data compression. If your 4:1 MP3 (320 kbs) is loaded into the system with 4:1 compression you end up with 16:1 (about 85 kbs). This double encoding is why most national and regional commercials sound so horrid on air.

3) Compression. Seems that everyone in the studio LOVES compression. there cannot be too much it seems. That is fine for the listening experience in studio, but by the time it goes through the entire chain out to the transmitter, your audio has been squashed to within an inch of it's life anyway. Much like 2) above, multiple passes through compressors, and limiters - both broad and multiband - contribute mightily to the poor quality that winds up in the listeners ear.

4) Experience. Or lack thereof. With ownership consolidation, there is too big an amount of Joe-College producers too high up in the ladder. Why? They are young, willing to work ridiculous hours, suffer a HUGE workload for multiple stations, for almost no money. Those passionate people who truely love radio for what it can be at it's very best are slowly and surely being weeded out.

So starting from the very beginning ...

The pressured Sales Rep, who doesn't give a rats ass, signs up the eager client and shoves 10 lines of copy with the clients name in it 3 times down his throat. It goes to the Producer who has 5 other stations to worry about, and just wants to get this crap done so that he can go drink cheap beer at the promo event that evening. The spot is really heavily compressed as the Producer doesn't have the talent (or time) to mix it correctly, and whips it into the data compresses automation system. It goes through the signal chain that the Engineer has set so that they sound "really really loud, 'cuz louder is better right?". It winds up in your radio. The poor spot never had a chance.

As for the music ... the same problems apply. It's not played from CD's anymore. The CD's are only there to load into automation the first time, be available should the system fail, and look really impressive on the wall when clients or listeners pop in for a tour. All you need these days is a mic and a touch screen. Everything is coming out of the computer, including the announcers at times.

Update the codec? Why that would cost money and affect the bottom line. Money? We can't spend money? Radio stations aren't throwing pennies, much less nickels around like man hole covers these days. To my surprise there are still a large number of organisations using MP2. As long as the bit rate remains as high as possible, I'm not overly concerned about the difference between MP2 and MP3.

WBRW (wbrw@radiomailbox.com) writes:

> Why is it that almost all commercials on FM sound so bad these days? I'm not talking about the content of the commercials -- I'm talking about their audio quality, or lack thereof.
>
> As I understand it, these days commercials are commonly delivered to radio stations via the Internet. That is fine, but when played on the air, why do most of them -- expect "in-house" commercials that the station itself produces -- sound like they are sourced from 64 kbps MP2 files? I'm talking about the harsh, chattery, gritty, metallic, wishy-washy artifacts that are clearly obvious in the audio. It's especially bad when you listen to the L-R Stereo Difference component of the sound, which reveals that Stereo encoding is used even for mono voice, as in this case the L-R component should be silent or only a faint (but undistorted) echo, but instead is heard as a large amount of what can only be described as "audio garbage".
>
> And these "artifacts" don't even seem to be the kind one gets from a typical Xing-encoded 128 kbps MP3 file. They sound more like an older, less refined codec, very similar to MP2, or the original version of RealAudio. I know digital audio is "the future", but why do people have to stick with 1996 technology? If you're going to send your commercials to stations over the Internet, why not use something like at least 192 kbps MP3, and have them actually sound *good* on the air, with clear, human-sounding vocal sibilance and musical percussion that doesn't sound like metallic chattering effects?
>
> Combined with the increasing number of stations which are playing *music* that has these same digital quality problems (indicate of the inappropriate use of "lossy" digital data compression) and the large amount of audio processing that is in vogue with today's "Loudness Wars", it has gotten to the point where I have to turn the Treble

> control down quite a bit just to stand listening to most commercial FM stations.  Only Classical and non-comm Jazz and NPR stations seem to have crisp, clear, truthful, high-fidelity sound on FM anymore, and also the handful of pop music stations that still play music direct from CD and commercials from good old-fashioned carts (SHOCK! HORROR!).
>
> I can only imagine what IBOC, a.k.a. "HD Radio", will do to further fall down this slippery slope.  Just think of a typical production chain... a caller using a digital PCS mobile phone is recorded as a testimonial on a radio commercial, which is encoded to MP3 audio for Internet delivery to the radio station, which transcodes it to MP2 for storage on their computer audio system, then runs it through a digital audio processor and a lossy-digital-compressed STL to the lossy-digital-compressed IBOC transmitter which then broadcasts it as a low-bit rate AAC stream with "simulated" SBR treble response.  After about a half-dozen lossy-digital transcodings and two dozen A/D-D/A conversions later, the listener finally gets to hear it in all its "CRYSTAL CLEAR, CD-QUALITY" glory!
>
> It's almost enough to make a turntable, a cart deck, a homebrew reverb unit, a round-pot mixing board, a CBS Audimax/Volumax, and a Raytheon AM tube transmitter the prefect line-up for providing the pinnacle of true high fidelity audio reproduction.

You guys hit the nail on the head with this thread... And it needs to
change! Everyone has their own format and encoding choices and needs, but
look at it this way:

1) Spot is produced by agency / talent and sounds good.
2) Spot needs to be sent to distribution channel
   A) Encoded to mp2 or mp3 for filesize, no standardization, usually 96k or
less rate
   B) Dithered to 44/16 (or less) for CD (better than A)
   C) On used 2 track tape that just turned 20 years old (why is this still
here? See Spot run!)
3) Spot arrives at station for "No-Doze" night guy to dub in
4) Spot played back through ancient analog gear whilst recorded back into
the automation system
5) Spot encoded into automation format (usually mp2, "FM Quality 96k").
6) PD's and GM's are proud Spot is on air, quality is agency problem.
7) See Spot sound bad???

Tommy Rhodes
BigVoices Studios

http://www.bigvoices.net

Ps: All of our spots for distribution are 160k OGG / MP3 encoded in true
stereo, not joint, & high quality, not small filesize...
And will directly plug into our soon to be released Linux based automation
software.

Most problems of this sort are caused by receiver front-end overload. The
FCC spec calls for suppression of transmitted RF intermods to at least 80dB
below the unmodulated carrier, but intermods can still be generated within
the receiver.

I don't want to rain on your parade, but this is just one more nail in AM's coffin. Over the past forty years, I have watched man-made noise sources that affect the AM band gradually increase to the point where most stations that used to cover their metro areas just fine are now lost in the noise.

With computers, embedded microprocessors, compact fluorescents, and dozens of other manifestations of modern society, the AM broadcast band is drowning in a sea of electrical hash.

It's not just LED traffic lights, it's DSL service, switching power supply noise, small fluorescent lights, and a nasty plethora of other common unintentional radiators.

The problem is that nobody cares. Do I listen to AM?  Yeah, but not in urban areas.  I listen while driving down highways or country roads, and sometimes at home while tinkering in the barn.   None of these places have serious computer-related noise sources, light dimmers, or anything nastier than maybe an electric fence that might be leaking to ground just a tad.

The sad thing is that most of the smaller stations can barely radiate enough to be intelligible within city limits during the day.  At night, they might as well give up unless most of their listeners live within a few blocks of the radio station.  From where I live, only the 50 kW stations from several states away can be heard well.  The locals usually suffer from skywave interference with the ground wave signal.

It's sad that the MW AM broadcast band has degenerated this far.  I fear that it will have to get much worse before it gets any better.

Hi Jeremy,

Sorry, my math, actually my typing, went awry the first time around, so
let's try it again.

That's a typical third order IM spur, 107.5 = (2 * 106.7) - 105.9
The modulation from 107.7 should be twice as loud as that from 105.9, and
the total adds up to about 300% modulation.  The problem is most likely
due to an inadequate front end design in your receiver, not the fault of
the broadcasters.

I doubt WJZW and WJFK are actually diplexed, I suspect they have separate
antennas on the same tower, at least judging by the data I have, unless it
is a recent change.

Bottom line, buy a better radio.

OK, ok, maybe the coordination idea is no good.  Still, for consumers,
it would be most helpful if all playlists were centralized into one

searchable venue, like TV-guide.  A wealth of music is in the public
domain.  It's merely a question of time, as to enjoying it.  That's
where a central schedule would come in handy.

I've never noticed that with the LED signals....might have to listen for
it next time I'm near one.
(We don't have them in the City of Los Angeles yet, although all of the
surrounding suburbs have
switched over to them. Freeway ramp meters are also LED-based now).

Of course, the big deal around where I live is noisy powerlines and such....

> To my surprise there are still a large number of organisations using MP2. As
> long as the bit rate remains as high as possible, I'm not overly concerned
> about the difference between MP2 and MP3.

MP2 actually does have some technical advantages over MP3, however, it
is a less efficient system, so MP2 at 160 kbps is never going to sound
better than -- or even as good as -- MP3 at 160 kbps. Video CDs
(little brother to DVDs) use MP2 Stereo encoding at 224 kbps for the
audio, and it still sounds pretty ragged at times.

And guess what?  The fine folks at XM store their vast music library as 384 kbps Stereo MP2 files.  That alone may actually be quite acceptable, but definitely not once they run it through their audio processing and 64 kbps AAC encoding by the time it hits the satellite. To make matters even worse, XM and Sirius both use so-called "Spatial Band Replication", or SBR.  That means that the entire treble region of their audio, above 8 kHz, is SIMULATED based on harmonics of lower frequencies and a few bits of "hints" per second to help the receiver "guess" the treble response.

I am lucky in that my area's #1 station still plays music direct from CD -- once in a while you can even hear it skip.  In addition, commercials are played from carts (with an occasional errant 8 kHz cueing tone getting through on the air), and they somehow avoid the plague of heavily artifacted commercials, although head azimuth mismatch sometimes causes a spot to sound okay in Stereo, but very dull when listening in mono.  Overall, while I may have issues with their audio processing, their clean, un-artifacted sound is clearly superior to listen to, as compared to stations like NYC's "106.7 Lite FM" which sound like their entire musical library consists of 96 kbps MP2 files.

p.s. I've heard that the ubiquitous "Delilah" syndicated evening love songs show is delivered to stations via satellite as a 128 kbps MP2 stream.  Can anyone confirm this?  The way her show sounds on the air seems to vary from station to station more than anything else.  Some stations even only carry it in glorious monaural sound, even as all of the station's own local IDs, commercials, and music are aired in full Stereo.

Putting an 8-element active phased array across the yard helps a lot.  Also
you can offer to buy neighbors with dimmers really nice dimmers as replacements
(the upscale Lutron dimmers are pretty good for neighbors, the ``Diva''
model and upwards, which cost about $30), and buy their touch lamps
for double what they paid for them.  Both sides have to get something they're
happy with or it won't work.  It's a lot easier to eliminate noise at the
source.  That leaves you free to null away local stations instead of having
to waste a null on neighbors.

So I don't see any real difficulty with the AM band.

Does anyone know if you can pick up live sports on XM or Sirius? I just checked both websites and it looks like you can get the World Series and Nascar but what about college football, NFL, NBA, etc. I would love to be able to listen to games on the weekend, since I'm usually away from a TV.

Also are they working on a boom box version?

Thanks!

Chuck.

> It's sad that the MW AM broadcast band has degenerated this far.  I fear that

> it will have to get much worse before it gets any better.

Don't worry.  IBOC/"HD Radio" is here, and it will finally take care of things once and for all.

Not by saving the AM band;  rather, by having *AM stations themselves* generate so much interference to each other, especially at night, that it will essentially put the band out of its misery, and along the way make a nice chunk of change for the folks at iBiquity.

Don't think it's true?  Utility companies in the greater NYC region have already received complaints from customers, thinking that the noise and hash generated by 710 WOR's IBOC signal is RFI coming from power lines.

I guess I am lucky in that during my half-hour (each way) daily commute in suburban NJ, I can listen to a 250-watt AM daytimer all the while, and only hear noticeable interference in two spots, both of them LED traffic lights.  I was surprised to find that the power company actually fixed one particular spot where the lines were constantly buzzing and crackling.

But this may not last, as there is a 50,000-watt monster just 20 kHz up the dial from this little "peanut whistle" station, and if they decide to use IBOC, the sideband hash will likely wipe out the adjacent daytimer, similar to how 710 WOR's digital signal is plaguing 690 WPHE from the Philly area with a constant background hiss.

I believe this is a couple hundred feet taller than the CN Tower. Of course the CN Tower is a self-supporting building, not a guy wire supported tower.

I don't know if this is still accurate but the last I heard was that the tallest antenna towers in the US were a 2,063 foot TV tower and a 2,060 foot FM tower both of which were located in ND. I believe there was also one or more over 2,000 feet located in TX.

I have read several times that the FAA has placed a maximum limit on antenna tower height. Does anyone know where this regulation is published? I would like to read it.

John and Richard,

Thanks for the explanations.  For some reason front-end overload and/or intermod hadn't crossed my mind.  I am a bit confused about the range of the intermod problem.  Anywhere within a five mile radius of the WJZW/WJFK tower I can easily duplicate the problem.  It REALLY trashes WTOP-FM for miles and miles; bad enough that I often switch to one of the WTOP AM relays (even with their awful patterns) to augment.

As for buying a better radio, I'll have to take that up with Ford/Bose (I have their "premium" system  - complete with AM stereo - in my 2001 Ford F150).

Thanks Again,

Jeremy Powell

Thanks to John Byrns and Richard Fry for their enlightenment. The problems inherent between our (Disney/ABC's) 107.3 WRQX, our 105.9 WJZW and Infinity's 106.7 WJFK were cited by the NAB a year or two ago in their fight against low power FM. We've all had to live with unpleasant interactions as long as the transmitters have been located where they are.

WJFK's antenna is on one of the "goal post" masts. WJZW's two-bay, three sided directional Alan Dick panel antenna is just below the T-bar.

> The Ontario DX Association handles QSL requests for CFRX, which does appear to still be broadcasting on 6070 KHz (I have never been anywhere I could hear it, tho).

The vintage Becker stereo in my 1981 Mercedes tunes the 49m/6 MHz "Kurzwelle" (shortwave) band, and during the daytime, 6.070 CFRX is often the only listenable signal I can pick up on the band.  It comes in well enough here in New Jersey that without looking at the dial you might think you were listening to 1010 CFRB locally.

This car radio also has surprisingly good reception on "Langwelle" (longwave), allowing me to pick up several local airport beacon transmitters, even while driving!  However, its "Mittlewelle" (mediumwave/AM) band is really nothing special, and the "Ultrakurzwelle" (ultra-shortwave/FM) band only tunes up to 104 MHz, as that's as high as the German FM band covered when the radio was built.

Listening to shortwave at night while driving is really quite special, though. There is still quite a lot of variety on the 49m band, and the higher frequency means that stations don't fade out under bridges and there's (slightly) less power-line interference.

Aloha!

Anime in the Limelight just aired it's new episode on KUMU AM 1500 ( www.kumu.com no stream available), and it is now posted on our website at www.limepub.com/radio.html .

Please join us as we celebrate FIVE long years on the web!!!
We intend to mark the occasion by rerunning A VERY SPECIAL SHOW on our site only...the *VERY FIRST EPISODE FROM 1997*! To kick off the new AitL guestbook and AitL's new Archive which will showcase past episodes, we'll be auctioning an Unusual Christmas present, Guest DJ on Anime in the Limelight! Watch for more info on Ebay very soon!

We are Americas longest running,highest rated streaming media Japanese Animation/ Science Fiction Music Show, playing original full length cuts by the original artists in Japanese language, with English commentary, history, cultural backgrounds, introductions and news from the Legendary Anime DJ *MAX* (since 1997!).

It is our goal to be the official BGM of every Otaku that can get us.

Hi

We purchased an Orban Optimod 8000 for use on our low power fm station. Any one here have any tips on how we should go about obtaining a competitve sound.

Please don't respond by telling me to buy and 8200 or 8400 (:D)

We also have some Urei Eq's and two Behringer processors, an Ultradyne 9024 multiband and Behringer Ultramizer DSP1400. Should any of these be included in the air chain?

Thanks,

Rob Basile

The ads WERE banned.   Orchard Supply chose to do the banning.

So what's the point?

Very few of us have heard AM IBOC/IBAC in a real-world situation.

iBiquity seems to have gone out of their way to prevent any independant 3rd party evluation of their system(s).

I have always been appalled at the advertising for digital cellphone service. And the service that emphasizes audio quality the most, Sprint, is actually the worst. In my newsroom we regularly have to ask people to call us back from a land line because their digital cellphone quality is too poor to put on the air. That means we wind up blowing off some interviews entirely. Too bad, but bad sound is worse than no sound.

OTOH, I still have my old analog Motorola 3-watt bag phone on AT&T Wireless, and it sounds almost as good as a land line. Some people can't tell the difference. I will keep that phone until it dies or AT&T turns off the analog service (which they say they will do 5 years from now).

>>From the demos I've heard, IBOC has the same, if not worse, "underwater" sound
>as RA does on a dial-up connection.

>Plus, at least on AM, it makes the (already) limited analog audio even worse
>with a sharp 5khz cutoff and loss of CQUAM.

Correct. This emperor is naked. If AM IBOC is not killed off, it could kill off AM broadcasting. AM IBOC would be the greatest step backward in the history of a medium that has already been repeatedly and purposely degraded by government regulators.

Greaseman is now hosting a nationally sydnicated show which runs in several markets, including where I live in Indiana, and Washington DC. He's recently appeared on Bill O'Reilly and CNN Crossfire discussing <gasp!> The O & A firing.

I'd call that a step up, at least in the 15-minutes-of-fame department.

It's my understanding that Sprint is a PCS service. The early reading I did on PCS indicated it was intended as a very short range service requiring many more sites than the "standard" A and B cell providers.

The B provider is always Ma Bell or the local telephone company, The A provider was a competing provider like, in the early days, Cellular One. AT&T is usually the A provider. I understand that AT&T simply cobbled the smaller cellular companies together to form a single promotable network. Cellular one was just a common name given to independent companies to make them appear larger than they were.

I do a lot of camping far from civilization. Not one of the PCS providers reaches me anywhere I camp. Both Verizon and AT&T do. Most of the time in digital mode.

It would be interesting to ask your callers which service they use. I'll bet the noisier ones will be PCS if they're not close to a site.

>>Plus, at least on AM, it makes the (already) limited analog audio even worse

>backward in the history of a medium that has already been repeatedly
>and purposely degraded by government regulators.

The loss of C-Quam wouldn't cause me to lose any sleep. The 5kHz limit reminds me of the early C-Quam days where some Motorola engineer actually suggested in a filing with the FCC that AM be limited to 5kHz because of C-Quam. If you check the FCC archives you'll find a submission making that suggestion. Everyone thought he was crazy. There was also a problem with transmitters over 5kw and early C-Quam.

This all may be a moot point in that very few receivers even reach 5kHz. I recall being with an engineer friend who used a spectrum analyzer to monitor the competition. Very few New York FM stations (WPIX-FM, WQXR, WNYC and WNCN being exceptions) went beyond 10kHz. There was a major loudness was at the time and those pesky high frequencies made loudness difficult to achieve.

While I realize most listeners aren't listening for fidelity I worry that AM and FM will gradually begin to sound noticeably inferior to the average consumer. I'm an early adopter, so not only do I pay top dollar but notice slight nuances in audio. When the multi-channel DVD-Audio, SACD, DVD and HDTV with 5:1 surround become more common, even the average listener will hear something sounds different.

My current CDs sound a little flat compared to my DVD-Audio disks (primarily because of the surround audio, not higher fidelity). I think the bar is being raised for the average consumer. I was hoping that AM IBOC would cause the quality of receivers to improve. What I'm afraid will happen is that IBOC will draw attention to itself at sunrise and sunset when the differences will be very obvious.

My Question is: do they hit the actual tower or the hard visible guy wires.

I have an over 1000 feet (375 meter) FM/TV tower some 7 miles from here. Despite of the fact that this country (Holland, Europe) is loaded with environmentalists I have never heard of this problem. A pro animal movement member even kiled a right wing politcian, to indicate how

fanatic they are.

Bizzarre.

I've never seen a dead bird near a tower, and I've had occasion to make a lot of visits to towers over the past quarter century.

There must be something else going on, something about the particular towers mentioned in the article that makes them unusually hazardous. I wonder why there should be thousands of dead birds near a particular tower and *none at all* near any tower in my part of the world.

I wonder about that, too (though not a lot). I used to ski at Snowbird in Utah. The lift's highest point was either 8, 000 or 11,000 ft. I don't remember which. In any case, those mountains are much higher than any broadcast tower I've ever seen (excluding towers on 11,000 ft mountains).

I expect the next suggestion will be to level the Rockies and get rid of the Sears and Hancock towers along with the Empire State Building. Suggestion #2 will be to ban Windex because birds crash into clean windows.

American Indian thinking.  Towers offend the sky.

You can't own the sky, you can't own land, you can't own a horse, you can't own a dog, and you can't own a waterfall.   A you can only own a casino.

The birds do have the advantage. These towers are not a big problem to the bird
population.   People who really worry about such things likely want to see all
broadcast towers eliminated - along with all tall buildings, roads, cars,
electricity, ranches, and anything else that's man-made.

Well, considering that the sponsor is the customer, they ultimately are
in charge. You can only offend customers to a certain point before they
walk. On that basis, they hold the power.

Most engineers who have been responsible for tower maintenance for decades have never seen a single dead bird. This whole thing may be in the realm of exaggeration or urban legend.

While I had a cow electrocute herself on an AM tower (thinking the base insulator was a salt lick), I have never seen a dead bird, despite having towers that ranged from 2 feet AMSL to 14,000 feet AMSL. And I have been around towers for 43 years.

This is exactly why you don't hear about towers and birds as a major
issue. As someone who has worked around towers for decades, I can tell
you that I have YET to see a dead bird on the ground or stuck in a
tower. I don't know what an appropriate "action number" might be, but
most assuredly "zero" is not it. Thirty-five years of working at tower
sites and never seeing a manifestation of the phenomenon leads one to
believe that it is not one of our major global problems.

>One. AT&T is usually the A provider. I understand that AT&T simply

>cobbled the smaller cellular companies together to form a single promotable network. Cellular one was just a common name given to independent companies to make them appear larger than they were.

B and A only mattered when 800 was all there was. The A and B bands are 800 MHz. C-F aren't. Sprint is F in many places.

Regarding digital v. analog: I've carried a cell phone since 1993. The first carrier here in Cleveland to go digital was GTE Mobilnet and I purchased a digital phone in 1995.

There is a huge difference. HUGE. But this is not to say that digital is always better. I'd say most of the time it is, but not 100% of the time.

On the other hand, you can't judge digital quality by the performance of one carrier and one network. Even with the same carrier, network performance varies from city to city.

My family and I use, or have used in the past, Nextel, AT&T, Verizon (former AirTouch/CellularONE), Alltel (the former GTE Mobilnet network here), Sprint PCS, Northcoast PCS (a local-only unlimited-airtime prepaid provider like MetroPCS and Cricket in other cities), and VoiceStream/T-Mobile.

That's all of the cellular companies servicing this area, except Cingular (Ameritech). [Worldcom doesn't count, as they never ran their own network. They resold airtime from other carriers.]

And I've noticed that service aspects do vary from city to city.

I use Verizon, my wife uses Sprint. We're both very happy with their service. But they have known problems in other areas.

AT&T got hit with a lawsuit due to its inability (a few years ago) to fix capacity problems in NYC. Some other carriers have had similar growing pains.

There is no one carrier that is right for everyone everywhere.

>I do a lot of camping far from civilization. Not one of the PCS providers reaches me anywhere I camp. Both Verizon and AT&T do. Most of the time in digital mode.

What that means is that those carriers just built out earlier than the other carriers did.

Ok... back to on-topic now. I just wanted to make a point: I don't know anything about IBOC, but I know a little about cellular technology... y'all ought to be careful when using cellular phone service as an example of why digital radio is better or worse than analog. There is just too much of a variance between carriers and markets for such a comparison to make sense.

>The loss of C-Quam wouldn't cause me to lose any sleep.

That's the same thing most lazy engineers say. Obviously, you've never heard C-Quam done right. For example, right now I'm listening to WLS in stereo on a Carver tx-11a...Fabulous! Blows away many FM stations...even at night.

>This all may be a moot point in that very few receivers even reach
>5kHz.

Let's see...GE Superradio, most OEM car radios, most Phillips-Magnavox radios (shelf systems, boom boxes), older Carver equipment...Need I go on?

Even my roommate, who is NOT an audiophile or radio geek, could hear the horrible "hissing" from WLW when they were testing IBOC, and now on WOR.

So much for dxing as well...the AM band is being turned into an even noisier wasteland.

Try horizontal first; will possibly attenuate some noise from local
adjacents -- particularly if you can get alignment away from a sidelobe.

> I am familiar with a company in Cincinnati that does frequency checks for

Something a simple as a spectrum analyzer could do this -- and a real high
gain yagi would really help.

Birds are funny. I live about 300 yards from an AM tower. I've never
seen
a dead bird under it. I've never seen a bird sitting on it. But on the
trees near my house, at the proper season (like .... next week) one can
see perhaps 4000 birds on one tree, and 0 birds on another tree 50 feet
away.

The listeners are the commodity; the advertisers are the customers; the stations are the vendor. The stations deliver listeners' ears to the advertisers for a fee.

No, the idea is that they have exactly the same right to withdraw their ads
that you have to air something that would make them want to do so.

Hmm. Then my sources are inaccurate. They've always told me PCS was
lower in power You're telling me that they're the same?

My camping spots are well inland from several interstate highways. The
PCS services work fine along those highways. There seem to be as many

cell towers as there are street lights. I know there are no cell towers deep in the woods. I camp on private land but I've seen public campgrounds with lists of cell services that work at their sites. None of them are PCS.

I recall seeing a Popular Science-type explanation of PCS before it was actually approved. It led me to believe you had to be very close to a cell site for it to work. Friends in Telecom confirmed that the information was correct.

As far as digital quality goes, I remember Cellular One giving me a free digital phone if I'd be willing to stop using analog. Early digital sounded like I was speaking under water. The phone itself required a U-Haul trailer, it was so big.

My newest phone (I change them often - early adopter syndrome) has everything except the ability to watch Debbie Does Dallas (that's my next phone). If I enable web services I'll risk carpal thumb syndrome.

Rich

Offending the customer brings ratings, which brings more customers not so
easily offended; or perhaps seeing what free publicity is.

We must have started in the business the same year :-)

The bird thing has only surfaced very recently for me. I don't recall any engineers at stations I worked for or my affiliates at networks mentioning this being a problem.

I was at WJIB, Boston, when the candelabra tower was built. Our biggest problems were falling ice in Winter and some orange and white cars in a motel parking lot below. Unfortunately, the cars weren't orange and white when their owners bought them.

> has good lawyers, they might figure out some way to sue you.)

Well, it does have a positive effect.   I had to reach pretty hard to come up with a defense of what Ron suggests.

It makes the station managment feel a little better over their screw-up.

Beyond that -

- it doesn't bring the advertiser back
- it almost guarantees that the advertiser will never come back
- word will get around to other businesses that they did that,  and those advertisers will look elsewhere to send their money

So the business community will have a great belly-laugh over a tactic such as this.

You used the example of suspending a kid from school for being a truant.  I think it's more applicable to a real-life situation I've seen where the neighborhood kids decide, instead of throwing eggs at the candy store across from the school,  where the owner is nasty and scary,   choose to just take their business elsewhere.

The store owner can put up a sign that says "only one school kids in the store at a time".    Yeah,  that'll show 'em.    In a few months,  his revenues are down,  he can't pay his rent,  and bye-bye business.

Without a mandate similar to digital TV, I don't see this happening soon.
Do you?

Digital is lower in power than analog (analog=up to 3w; digital=up to 600 mw)

I don't know that there's any difference in the PCS band vs. 800 MHz.

I know that tower well. It almost came down in a storm about ten years
ago, after which it was reinforced. WJIB(FM) is now WTKK and transmits
from the Prudential Center.

I've seen hawks using the WBZ-TV tower as a perch.

Did you ever watch Arthur Godfrey in the 50s?  ``Lipton got a new
chicken so the soup's pretty good this week.''

That sort of advertising does more for you than any ad you could plan.
It shows you're a good sport, and it reframes programming in the
reality in which you're a good sport.

Both program and advertiser benefit.

If you have an advertiser who isn't a good sport, boost your ratings
by slamming him.  Listeners like it.  Advertisers who are good sports
will buy into it, even new ones.

Jeez, the fear of moron advertisers is probably responsible for all the
ills of the world.

There is also the issue of excluding one advertiser while accepting others
in thier category; it's OK to not except XXX Theatres as long as you exclude
them all. If a station excluded OSH, but not TrueValue, they could have a
discrimination matter on their hands.

Yes. There are a couple of dozen non-D 50 kw clear channels. The rest of us
have lower power, directional arrays and all the other stuff.

While substantially remedied, platform motion was a big deal; listening to
an AM stareo station even in mono in deep nulls was painful. I saw "wrong
side of pattern" ratings increase 300% based on a ZIP code analysis after
dumping C-Quam at KTNQ in LA in 1995.

I could never afford or justify the cost of a Carver, a situation I think
most listeners find themselves in, too.

> (shelf systems, boom boxes), older Carver equipment...Need I go on?

Well, I have two cars with Bose systems and one with a stock Jeep/Chrysler
radio,a nd the AM sections just suck. They sound like telephones. Most OEM
car radios today have crummy AM sections; many aftermarket ones are just as
bad, especially the $39.95 kind popular with used  car buyers.

GE has probably made less than 500,000 Superradios; it is a niche product .
There are even less Carvers. There are 70 million radios in the USA.

There are less than 1000 serious DXers in the US; they will have to get over
this change. Should radio be held hostage so someone can get WABC in
Missouri?

Huh? only 70 million. That leaves a lot of cars and homes without radios! Check your source for this figure, it has to be wrong.

Rich Wood <richwood@nyc.rr.com> wrote:

"It's my understanding that Sprint is a PCS service. The early reading I did on PCS indicated it was intended as a very short range service requiring many more sites than the "standard" A and B cell providers."

That's right -- Sprint PCS (and T-Mobile) operate in the 1900 MHz PCS band.

"The B provider is always Ma Bell or the local telephone company, The A provider was a competing provider like, in the early days, Cellular One."

That's not quite correct, at least in reference to the B band. When the metropolitan cellular licenses were first issued, A licenses were issued to non-wireline carriers as you note; B licenses were issued to existing wireline carriers, but *not necessarily* to the dominant wireline carrier in that metro area. To name three examples, the B license went to GTE in Indianapolis (Ameritech territory), to Ameritech in Cincinnati (Cincinnati Bell territory) and to BellSouth in Lexington, Kentucky (GTE, now Verizon, territory). The FCC in recent years has not prevented A-side systems from being sold to wireline carriers, which is how GTE was able to buy a number of A-side systems.

[ Moderator's Note: A and B no longer really matter. Phones these days rely on their preferred roaming lists (prl's) to tell them which networks to prefer. ]

This discussion is missing the point. AM IBOC is a huge step
backwards from existing analog audio quality, even on a crappy analog
tuner. I've heard it. Under ideal show-demonstration conditions it's
unlistenable -- I can only imagine how much worse it would be under
real-world conditions. That it degrades the analog signal is just one
more argument against it. I agree that AM radio should not be "held
hostage" to DX'ers. This is not about pleasing DX'ers or a few
gearheads who own Carver TX11a's (of which I am one). The quality
is inferior to what now exists, and to what the typical AM listener
now hears on his or her typical AM tuner.

But considering that hardware stores are generally pretty innocuous (I mean, I
cannot figure out how a Lowe's or Home Depot or Ace Hardware or True Value ad
could offend,  but I'm sure someone will stretch to make an argument) -- I can't
see why someone wouldn't want their advertising dollars.

> While substantially remedied, platform motion was a big deal; listening to an AM stareo station even in mono in deep nulls was painful. I saw "wrong side of pattern" ratings increase 300% based on a ZIP code analysis after dumping C-Quam at KTNQ in LA in 1995.

Since with mono talk audio, such as what KTNQ was likely running, the only difference between a monaural and C-Quam Stereo AM signals is a subaudible pilot tone modulated at 4%, I fail to see how turning this off would make such a substantial difference, unless either an unusually large number of your listeners were using AM Stereo equipped radios that failed to switch automatically to Mono mode as appropriate based on available signal strength and quality, or there was some incompatibility between KTNQ's C-Quam exciter and transmitter and/or antenna array that was causing the degraded signal towards the nulls.

Indeed, suppose KTNQ was transmitting mono talk audio through the C-Quam exciter with the pilot tone turned off.  Then, theoretically there should be *no* difference between it and a pure monaural signal, and thus any degradation of signal coverage would be caused by some factor other than the inherent design of the C-Quam AM Stereo system.

Once in a while I come across a "monaural" AM station which is actually transmitting single-channel (i.e. Left or Right only) C-Quam "stereo" audio with the pilot tone turned off, such as 1150 WRUN in Utica, NY.  Obviously in this case, an unknowing engineer thought that AM Stereo acts like FM Stereo, where turning off the pilot tone disables the whole system and leaves you with a mono signal. Obviously that is not the case, but it still theoretically shouldn't adversely affect mono listenership, as the matrix audio processing compensates for the lost mono (L+R) volume of the single-channel audio, and without the pilot tone, most AM Stereo radios don't see it as being any different than a pure mono signal.

> Well, I have two cars with Bose systems and one with a stock Jeep/Chrysler
> radio,a nd the AM sections just suck. They sound like telephones. Most OEM
> car radios today have crummy AM sections; many aftermarket ones are just as
> bad, especially the $39.95 kind popular with used  car buyers.

Volkswagen OEM car radios currently use a DSP design which has AM audio response flat to 6 kHz.  Many Ford/Visteon OEM radios continue to be equipped with AM Stereo, and the ones that don't have a very gradual drop-off of high frequency response, for a pleasingly mellow sound that still lets the high sibilance get through on voice for extra clarity.  Blaupunkt has advertised their aftermarket car radios as having "Superior AM Frequency Response".

> GE has probably made less than 500,000 Superradios; it is a niche product .

It is still seen on the shelves of most department stores, along with its "Optimus" clone at Radio Shack which has an even wider bandwidth on AM -- the Optimus's "Narrow" mode is about the same as the Superadio's "Wide" mode, and its "Wide" mode is really extra-wide, with audio response far in excess of the 10 kHz NRSC AM audio limit.

Philips-Magnavox radios with digital tuning use a high quality AM tuner module, with selectivity provided by IF coils rather than a ceramic filter, so the audio bandwidth is also unusually wide.  Sony, RCA, Emerson, and Memorex boom-box and bookshelf stereos are also known to have above-average AM audio response, and all make easy conversions to AM Stereo using Motorola's third-generation MC13028 chip.  I have even used a little $29.99 Sangean analog tuning shortwave radio that provides very crisp and clear AM audio, subjectively near "FM quality" from a well-processed station.

> There are 70 million radios in the USA.

I suggest you double-check your figures, as the 1995 edition WRTH I have on hand says there were more like 524 million radios in the USA at that time.

> There are less than 1000 serious DXers in the US

And how many who don't know that they're "serious"?  Any 50 kW clear channel AM station with a live call-in show after dark will consistently get callers from multiple states, and taking into consideration the typical ratios of callers to listeners, that indicates a substantial amount of "DX" listeners.  Stations like 770 WABC wouldn't constantly boast about their nighttime coverage of "37 states and 7 Canadian provinces" if they thought it only yielded them a handful of extra listeners in addition to their local groundwave coverage.

And on FM, those who have high-quality radios DX all the time without thinking about it, just by hitting the "Seek" button and stopping on a station playing a type of music they like.  On a *good* car radio, "seek" tuning on FM in a non-rural area will often provide a listenable station on every 0.2 MHz increment across the dial, and people don't give a second thought to listening to out-of-area signals that IBOC would wipe out with its adjacent channel interference.

> Should radio be held hostage so someone can get WABC in Missouri?

Perhaps not, but WABC should at least be able to cover suburban NJ and CT, which IBOC at night may not be able to do.  Tests of IBOC digital on 1500 WTOP in Washington, DC yielded an effective digital-mode coverage radius of less than 15 miles.  If that's all a 50,000-watt station can get out of IBOC at night, I doubt a typical 1000-watt "graveyard channel" peanut whistle could even be heard beyond the end of the driveway of its transmitter site!

I don't know how true this is, but I've heard that some transmitter buildings next to very tall towers have had to have some very heavy, durable rooftops as a chunk of ice of any size breaking loose and building up velocity from a 1000 foot high tower will crash through a roof.

This "deadly tower" story reminds me of a story that appeared in our local paper a few years ago. A woman from a wealthy suburb was leading a cry to get the cell phone towers removed from her town. She cited health hazards, microwave radiation, danger to the environment..... all of the "deadly tower" argument. Of course, because she was from a wealthy 'burb, some were skeptical, and that it was just she didn't like looking out on the window and seeing a tower in the distance.

And they took her picture with the tower in the background. Of course, Ms. Goody-goody-twoshoes forgot to take the pager and cell phone off of her belt when she posed for the pic....

There's a lot of non-DXers who listen to distant stations to get away from a
local programming choice which sucks.

The best radio within 350 miles is better than the best radio within 25 miles,
almost all the time.

Syndication may lower the odds eventually, with equally bad programming
everywhere.  Or equally good: the radio I do listen to is as it happens
syndicated,
just elsewhere.

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
_AND_
we celebrate 55 years of student broadcasting at UM

While I may agree with you about IBOC, WTOP, on 1500 kHz, has pretty poor local coverage in any mode.  It's _SO_ bad that they duplicate on another AM they bought in Frederick, MD, in an attempt to fill their big null, and on a rimshot FM to fill Virginia suburbs.  As far back as the 1940s, there were daytime skywave problems on WTOP in downtown DC in low sunspot years.

It would be more interesting to know what the IBOC coverage of WILC was like at night.  I live about 15 plus miles west of WILC, and their IBOC sidebands take out 890 and 910 at night. Their 500 W 3-tower night array has about 440 mV/m @ 1 km in my direction.

Our moderator noted:

"A and B no longer really matter. Phones these days rely on their preferred roaming lists (prl's) to tell them which networks to prefer."

Yes, so that (for example) a Verizon phone will prefer the B side in Indianapolis while favoring the A side in Louisville, since each is owned by that company.  Supposedly some companies program their phones to not allow *any* roaming on other carriers with whom they do not have a good working relationship, even if the signal from their preferred carrier is inadequate; that's why there are plans in the works (I'm not sure if the FCC has actually put this through) to require newly manufactured cell phones to route 911 calls to whichever system has the stronger signal regardless of preferred roaming setups.

Such a case (one channel only being broadcast in stereo mode, pilot on or off) would have a very detrimental effect on many monaural radios. It would appear to the radio's envelope detector as extremely heavy IQM and the listener would be subject to very fatiguing distortion. Only synchronous and compensated envelope detectors would be able to handle this "one channel only" condition with any grace. Cheap radios would sound like crap.

There was a report some years ago about the WSBK, Boston, (CH38) having a large chunk of ice come through the roof. I recall our engineers at WJIB and WLVI (CH 56) parking their cars quite a distance away and hoping they wouldn't be hit as they walked up to the building.

Rich Wood <richwood@nyc.rr.com> wrote:

"I was at WJIB, Boston, when the candelabra tower was built. Our biggest problems were falling ice in Winter and some orange and white cars in a motel parking lot below. Unfortunately, the cars weren't orange and white when their owners bought them."

Dunno about the orange-and-white cars, but when WCBS-TV had the side-mounted (actually corner-mounted) dipoles on the Chrysler Building they had some problems with ice during the first winter after they went up, and CBS had to come up with de-icing gear so that the passers-by wouldn't get run through by huge icicles.

False premise and false assumption.

KTNQ was braodcasting an all-grupera music fomrat in January of 1995 when we
took the C-Quam off; it continued to be mostly music for another year before
gradually transitioning to talk.

> Indeed, suppose KTNQ was transmitting mono talk audio through the

Idem.

These are rare exceptions. I can go into a Pep Boys, WalMart or Target and
get a variety of awful-sounding AM radios today; I can not get a single good
sounding one.

Among DXers, the Optimus is widely known as a terrible radio; it is so
braodband as to not separate between stations, especially at night.

I was missing a zero; the figure is around 700 million. The WRTVH is not a
good source for any information these days, especially things like reciever
counts (the Argentine receiver count is lower than the measured weekly
listenership of one nationally networked radio station, for example)

> coverage.

However, they do this as a "we are bigger than they are" ploy; these stations make nearly no money, or no money at all, form any coverage outside thier local metropolitan area.

A DXer is someone who listens to DX stations as a hobby, challenge, etc. A DXer is not someone who occasionally listens to a crystal-clear signal form a distant station. That is just a listener, not a DXer.

There are very few distant listeners and very,very few DXers. (Largest MW DX club has about 700 members)

WTOP on 1500 does not have exactly a good coverage, especially at night. Remember, 50 kw on 1500 _is_  the same as 1000 watts on 550; WTOP has both a bad frequency, the DC area's horrible conductivity, and, to top it off, it is directional.

That is true of almost any tower height. Even right here in the temperate San Francisco Bay Area, buildings next to towers of very modest height (like 200') have steel mesh and other protections so that the falling ice (yes, we get that from time to time on our mountain tops) will not damage the roofs.

I can imagine that where ice is really a big deal, the protections are even more industrial.

The newest generation of decoders solve this problem quite well. Platform motion has all but been eliminated. And, most good engineers know the 'ol trick...shifting the carrier about 15 Hz off center (while still keeping within the FCC's +/- 20 Hz tolerance).  And, it is a myth that AMS causes loss of coverage area. But, I'll play along. Let's pretend that CQuam DOES cause loss of coverage...So does FM Stereo...That's a well known fact. Go ahead...I dare you to turn off your FM Pilot tone.

>I could never afford or justify the cost of a Carver, a situation I think
>most listeners find themselves in, too.

If average Joe or Jane wasn't going to spend the money for a nice analog tuner, what makes you think that they'll spend it on an inferior digital tuner? Let's see...adding $100-$150 to the cost of a tuner, added with no increase in the quality of programming, plus the bad state of the economy...all for audio that they can get out of a $19 sound card and RealAudio? You think they'll really buy them??? Analog AMS was very affordable...Just pennies added to cost. Plus, with both Motorola and Phillips working on new DSP chips that can add CQuam in software, the cost goes down even further. In the 2000 catalog (last year they sold them [afaik]), Radio Shack sold the Sony AMS walkman for $29.95. Will an IBOC walkman be that cheap?

Well, there's your problem. What's the old saying...No highs, no lows must be Bose. My 2000 Jeep Cherokee has the RAZ tuner...Very nice AMAX compliant AM stereo, thank you very much. My roommates GM car has the UX-1 AMS radio...Also AMAX compliant. And, a quick check of the web sites (ford.com, gm.com, and chrysler.com) shows:

All Ford premium sound systems have AMS

GM offers AMS standard in the Cadilac family

And Chrysler offers AMS standard on a majority of the in-dash CD systems, and as on option on every model of Chrysler/Jeep.

My personal experience with OEM radios has been that they have great AM sections. It's the after-market units (Alpine, JVC, Pioneer) that suck. But most buyers are more concerned with CD functions there.

>
>GE has probably made less than 500,000 Superradios; it is a niche product .
>There are even less Carvers. There are 70 million radios in the USA.

The GE Superradio is a niche product? That's odd...The local K-Mart and Meijer both stock them side by side with other battery operated units...in stock for $39.99. I'll give you that Carvers were a niche brand. But what about the Phillips-Magnavox brands? A quick glance at their web page shows many of their boom boxes and shelf systems with an AM frequency response of 40hz-8khz, +/-3db...Not exactly narrow-band for a mass produced brand.

>There are less than 1000 serious DXers in the US; they will have to get over
>this change. Should radio be held hostage so someone can get WABC in
>Missouri?

OK, fine. But should listeners be held hostage by Clear Channel, Infinty, etc? The answer SHOULD be the same...probably not. That's why I signed the Petition to re-regulate radio at http://www.petitiononline.com/rereg/petition.html

One final thought...Since the iBiquity box runs Linux, and Linux is GPL, maybe someone ought to see if the iBiquity code is violating the GPL license by linking to the GPL libraries. If so, this coud be a stumbling block for iBiquity. And I find it funny that the WOR-NY digital box has already crapped out on them!

Suggesting a sponsor for crime equipment is plainly of benefit to the
sponsor; it just reframes the ad.

The problem was a moron sponsor.

| I can imagine that where ice is really a big deal, the protections are
| even more industrial.

It's probably one reason why, underneath the 1200+-foot KCTV tower in midtown
Kansas City, the number of apartment buildings in the area has
dwindled in recent years. In the late 1950s, when the tower for
then-KCMO-TV was built, the ice falling off the tower during storms
was reportedly of legendary proportions.

I never did hear, though, of any vehicles going past on very busy 31st
Street getting hit.

In article <aol6mo$sd4$1@xuxa.iecc.com>, John Higdon <no-spam@amadeus.kome.com> wrote:

> Such a case (one channel only being broadcast in stereo mode, pilot on or off) would have a very detrimental effect on many monaural radios. It would appear to the radio's envelope detector as extremely heavy IQM and the listener would be subject to very fatiguing distortion. Only synchronous and compensated envelope detectors would be able to handle this "one channel only" condition with any grace. Cheap radios would sound like crap.

Hi John,

I don't understand your reasoning here, could you elaborate on this? Why would single channel modulation in an AM stereo system "appear to the radio's envelope detector as extremely heavy IQM"? The quadrature signal component in the CQUAM AM stereo system is specifically designed to have a minimal impact on the signal envelope, as seen by the normal envelope detector.

Why would this envelope detector distortion problem affect only monaural radios? Stereo radios also recover the main L+R signal modulation with an envelope detector. Also the L+R signal demodulated by the envelope detector is used in the AM stereo demodulator to undo the pre distortion of the quadrature signal, and in phase signal too, that is introduced at the transmitter, this should propagate any distortion due to envelope detector into the stereo difference, or L-R signal too.

I know, you are going to say that the narrow IF filters in the receiver remove some of the modulation sidebands that are necessary to prevent distortion, before they can get to the envelope detector. I would think that much of the distortion produced this way would be at higher audio frequencies, above those the radio normally reproduces, so that low pass filtering in the audio stages could eliminate the distortion components, without having a significant impact on the desired modulation frequencies.

Next you are going to tell me that an asymmetrical IF filter response will also cause distortion with a single channel AM stereo signal. That is true, but it is equally true that an asymmetrical IF response will also effectively generate quadrature components in a normal monaural AM signal, with the resulting distortion when an envelope detector is used.

Distortion due to quadrature signals in an envelope detector is already a problem with monaural AM, why is this a new problem with AM stereo? Cheap radios already sound like "crap" on monural AM signals, why should we expect a cheap radio to sound any better with AM stereo?

Regards,

John Byrns

Unless you know something about OSH that I don't, I think you may be speaking out of school. That company has been successfully advertising on Bay Area media for decades. Its ads are timely, tasteful, and apparently effective...since they spend a great deal of money on media advertising. That gives them the right to expect a certain amount of respect from their advertising vendors.

Consider, also, that the DJ who made the remark has since been removed from the air, over this and other incidents. In other words, it appears in the long run that the station agreed with the "moron sponsor" in terms of its programming objectives.

In this particular case, the sponsor did absolutely nothing to warrant berating for its actions. It was dissed on the air by a DJ who, already, was skating on thin ice. The sponsor spoke with its wallet. The station listened. That is the marketplace in action.

If more vendors listened to their customers that way, American business might be in better shape right now.

WSRF "Mystic 1580" in Fort Lauderdale, FL is authorized to operate full time
at 10 kw day and 5 kw night.

For the last month or so, WSRF has been operating daytime only at 180 watts.
Is this station about to go dark, or is it waiting for some part to repair
the transmitter?

My Nokia 3285, a relatively new model just released earlier this year, did; a few months ago I had to call 911 from in front of my house... I live in an area along Lake Erie where only one carrier has strong coverage, and it's not my carrier; but instead of latching onto the weak digital signal my carrier has in my neighborhood, I got a *really* *strong* analog connection to the 911 operator.

If I'd connected to my own cellular company's network, the call would have been (a) digital and (b) weak. Well, not too weak - if I'm outside and pointing eastward I can catch the tower they have that covers the Headlands. But it was definitely easier to make the call than it would normally have been.

What you're talking about, I suspect, has already happened on a large scale.

Here I am minding my own business in Macon, GA and
what pops up!! Comments about WSRF.

I was Chief Engineer of WSRF in 1981-82.

Small World.

It did not even have a decent signal with the 10 KW
let alone 180 watts! It has seven towers and protect
Fidel and the Canadians!

73,

Meyer Gottesman, W6GIV

That is true, but it is equally true that an asymmetrical IF response will also effectively generate quadrature components in a normal monaural AM signal, with the resulting distortion when an envelope detector is used.

No, I'm not going to tell you any of that stuff. You seem to be providing both sides of the theoretical argument just fine. I'm speaking of actual, hands-on experience from engineering several AM stereo stations over fifteen years. You can argue theory (both sides if you like) until you are blue in the face. All I'm telling you is "what is".

Things usually work much better in promotional literature than they do
in the field.

> Distortion due to quadrature signals in an envelope detector is already a
> problem with monaural AM, why is this a new problem with AM stereo?  Cheap
> radios already sound like "crap" on monural AM signals, why should we
> expect a cheap radio to sound any better with AM stereo?

But my point was that a monoaural radio sound much WORSE when tuned to a
stereo station on which only one channel is modulated. I doubt very much
that any theory you can spout can erase fifteen years of practical
experience with AM stereo.

Mr. Hardin,

You may have just disproved your own slogan/signature with your 'she's a big girl, she can handle it' remark.

What a sick and insensitive thing for you to say, and to defend.

Gary W.

There's something called the barbecue effect, where the more people there
are, the worse the hamburgers are.  Hamburgers cook until the most timid person
thinks it's long enough.

The most uptight sponsor is not the best programmer nor the best judge of even
his own interests.  The _average_ sponsor is.

Were I a hardware store, and some burglar is injured in a fall, I'd be happy
if the DJ recommended my fine selection of ladders.  The DJ has a right to
assume that I am not a moron, and act accordingly.

If you want your neuroses soothed, don't go to a radio station.

Unless the radio station is run by morons!  That's why we have words like
``chickenshit''
and ``tightassed.''

That may be true, but it is irrelevant. The radio station is the vendor;
the advertisers are the customers. Any business that just says "up
yours" to its customers deserves to and should go out of business.

Here's the bad news: programming on commercial stations is HIGHLY
influenced by the advertisers. Advertisers provide the revenue for the
stations and the stations cannot afford (literally, in every sense) to
alienate the sponsors. Period.

If you don't like that, listen to "listener-supported" radio.

> If you want your neuroses soothed, don't go to a radio station.

If I'm the one paying the bills, I'll go where I like.

Or how about "business smart" or having "business savvy". This may come
as a shock, but commercial radio IS a business.

I gave a talk in 1990 on natural language with the title ``Can Insensitivity be Automated?'' so you may have my number.

Your side, I assume, wants the woman to be a helpless victim.  My side takes a look around at the average woman you run into and finds they can take care of themselves pretty well.  That's the insensitive point of view for you.

An untrivial view of women is still too complicated for propaganda, I guess; which this template fits.

That's not inconsistent with what I said later in my post, the operative
word is "cheap", and I would expect a similarly "cheap" stereo radio to be
just as bad.

> > Why would this envelope detector distortion problem affect only monaural
> > radios?
>
> Because heavy phase shift distortion is part and parcel of cheap
> envelope detectors. Most stereo radios use synchronous detectors.

Many (if not most, or even all?) stereo radios that take the L+R signal from the synchronous detectors still have an envelope detector as part of the "cosine correction" circuit, or what ever it is called, that feeds the synchronous detectors, so any problem with envelope detection would still affect the output of the synchronous detectors in the stereo mode. The early stereo demodulator chips used the output of the envelope detector for the L+R signal, so unless the recent production volume of AM stereo radios is greater than I think, the larger production numbers early in the game would imply that most stereo radios used envelope detectors. The envelope detectors used were of the pseudo synchronous type, where the signal to drive the carrier input is obtained by passing the signal through a limiter, but they are still envelope detectors none the less.

> > Stereo radios also recover the main L+R signal modulation with an
> > envelope detector.
>
> Not good ones.

Can you point me towards a "good one", and more particularly who provided the AM stereo demodulator chip used in it? I am curious to see an AM stereo demodulator circuit that avoids the use of an envelope detector entirely. I am sure it can be done, but suspect it is probably not without its own problems, and I have to wonder if it really eliminates problems related to envelope detectors, or if mathematically it just ends up getting the same result, including envelope detector artifacts, a different way.

Regards,

John Byrns

Alfa Lima International on 15070 and somewhere between 6310 and 6200 tonight

ALI will be on air (as almost always) on 15070 kHz AM and between 6200 and 6310 AM
Transmission into the 48 mb will be carried out with only 50 watts and on 15070 with 300
Soon both frequency's will be used with 300 watts but until that time the lower one with lower power.
Plans to start up around 22.00 or 22.30 UTC this Saturday and continue till 07.00 UTC on Sunday. Maybe even a bit longer.

Fairly said that we are broadcasting this way every week but due some heavy tech problems it was not sure if we did continue this way, but after sponsoring our selves again big time we can run our shows again

Also we do have brand new full colour and great design QSL Cards and info sheets as well new design T-shirts in stock with full colour printing. Examples are  to see on our webpage (see below).

If you like to get our little QSL pack send a correct reception report to our mail drop (aswell below) and enclose 1 USD or if you don't have US Dollars your local currency (money), Just enough to cover reply.

Just a quick note for publishers, Al the information that is available on our webpage is free for publishing, There is also an zip file link below with a brand new pack with photo's and info concerning our station.

Hope props are good.
Greetings from Alfred
ALI

News flash.  The reason the _DJ story_ has legs is that the story itself
is entertainment _to you_.  Your side is getting something out of it.  This is
called economizing it.  Oh! the rush you can get out of outrage and calling the
station!  What caring people you are!

I am rejecting that where it starts.  The right course is to respect
the woman's position and say she can deal with it as appropriate;
the story is not moral entertainment for me and should not be for you either.

There's no moral high ground that doesn't involve hard work, deep knowledge
and self-sacrifice.  There is only posturing otherwise.  Nothing is more common.
There's no work, knowledge or sacrifice here.

But did you notice a Permanent Question in this story?  Here's James Thurber on
the Radio Soaps

``In many soap operas, a permanent question is either implied
or actually posed every day by the serial narrators.  These
questions are usually expressed in terms of doubt, indecision,
or inner struggle.  Which is more important, a woman's heart
or a mother's duty?  Could a woman be happy with a man fifteen
years older than herself?  Should a mother tell her daughter
that the father of the rich man she loves ruined the fortunes
of the daughter's father?  Should a mother tell her son that his
father, long believed dead, is alive, well, and a
criminal?  Can a good, clean Iowa girl find happiness as the wife
of New York's most famous matin�e idol?  Can a
beautiful young stepmother, can a widow with two children, can a
restless woman married to a preoccupied
doctor, can a mountain girl in love with a millionaire, can a
woman married to a hopeless cripple, can a girl who
married an amnesia case - can they find soap-opera happiness and
the good, soap-opera way of life? No, they can't
- not, at least, in your time and mine.  The characters in
Soapland and their unsolvable perplexities will be marking
time on the air long after you and I are gone, for we must grow
old and die, whereas the people of Soapland have a
magic immmunity to age, like Peter Pan and the Katzenjammer Kids.
When you and I are in Heaven with the
angels, the troubled people of Ivorytown, Rinsonville, Anacinburg,
and Crisco Corners, forever young or forever

middle-aged, will still be up to their ears in inner struggle,
soul searching, and everlasting frustration.''

Bring back the all-grief channel for you guys.  Put the woman in
your story-template and there you are.  She's helpless.

Imus encountered the story on his Scum Report, took the position that it was bad
behavior on the part of DJ or audience, and McGuirk added ``Arizona
Morning Zoo.''

He didn't offer sympathy to the woman nor did he have the position to do so;
just commented on the demographics.

A very nuanced moral position, to see what it isn't one's place to decide.

The popular line is clear enough.  That's how the story has legs.  It
infantilizes the woman however, which you guys are very happy to do in
support of your own self-satisfaction.

The _product_ of the radio station is audience.  You can't let a customer screw
that up.

Nope. The act of stereo demodulation mitigates the distortion caused by phase shifting carrier. A cheap stereo radio (in stereo mode) will deal with the "one channel-only" distortion much better than a cheap mono radio.

As for the rest of your reiterations, I'm not going to argue theory that pics nits with grossly evident reality. My original point that a stereo station broadcasting one channel only in stereo mode produces noticibly inferior audio on a typical mono radio than does a standard mono signal stands.

If you are in town some time, I'll be happy to demonstrate it for you.

# Amateur Radio Newsline™ Report 1313 – October 11, 2002

Amateur Radio Newsline report number 1313 with a release date of Friday, October 11th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

A first ever Amateur Radio satellite for New Zealand and hams are honored in the U-S mid-West  These stories are first on Amateur Radio Newsline report number 1313 coming your way right now.

(Billboard Cart Here)

**

## HAM RADIO IN SPACE:  ZL ANNOUNCES PLANS FOR KIWISAT

Ham radio in space is coming to New Zealand.  This, with announcement of a new ham radio satellite to be designed and built down-under.  Amateur Radio Newsline's Jim Meachen, ZL2BHF, has a close-up look at Kiwi Sat.

--
Yes, that's actually its name.  Kiwi Sat.  And in case you were not aware, the Kiwi is a bird with thick hair-like feathers, no tail, a beak one third the length of its body, and nostrils at the tip.  It looks like a cross between a hedgehog and an anteater.  And its found only one place in the world.  Here in New Zealand.  Its our mascot and we love it.  And now the hams of Kiwi-land are naming our soon to be built ham satellite after it.

Like the bird that its named after, Kiwi Sat will be a bit unusual in its own right.  It will be a rather small ham-sat.  A 237 millimeter cube based on the early 1990's Microsat technology developed by AMSAT.  But it will carry some 21st century electronics that will enable it to run both as linear translator for low duty cycle modes like sideband and C-W as well as an F-M transponder to serve the needs of the overall ham radio community.  This, even though the solar cells can only produce a maximum of 15 watts of available power at any given moment and an average of only 6 watts.  Uplinks will be on 70 and 23 centimeters with Kiwi Sat talking back to Earth on 2 meters.

But there’s more.  Plans also call for Kiwi Sat to carry some sort of scientific experiment and possibly even a digitalker module.  This would permit the satellite to identify with its own voice as well as provide some good publicity for the Kiwi Sat project.  All of this made possible by the many advances in microchip design that have taken place since the first Microsat was launched.

There is one big difference between a feathered Kiwi and the ham radio satellite the hams down here are building that I should mention.  A live Kiwi cant fly.  Kiwi Sat will.

>From Auckland, New Zealand -- down-under -- I’m Jim Meachen, ZL2BHF, reporting for the Amateur Radio Newsline.
--

A s we go to air, no completion or launch date has been announced for Kiwi Sat. An excellent article on the project appears in the summer edition of the AMSAT Journal.  (AMSAT)

**

HAM RADIO IN SPACE:  PC SAT IN ECLIPSE

Meantime users of the P C Sat ham satellite are being requested to please turn off all unattended night time transmissions.  This, to conserve energy while the bird is not in direct sunlight and having its batteries charged.

According to Bob Bruninga, WB4APR, P C Sat left full sunlight on Sunday September 30th.  The bird is still fully operational but is passing through 25 minute eclipses on every orbit.  And because of these eclipses the overall power available on board P C Sat is down.  Keeping unattended beacons off while you are not there cuts the load on the satellite power supply significantly.

Bruninga says that with everyone’s cooperation the satellite might be able to make it to full sun again in November.  He adds that normal operations are O-K when the satellite is in sunshine and the batteries are on charge.  (AMSAT)

RADIO LAW::  FOLLOW-UP – S.A. ACTS TO PROTECT THE 70 CM BAND

A follow-up to last weeks story on the probable threat to the 70 centimeter band posed by a planned Earth Exploration Satellite Service that’s soon to be launched.   As reported last week a discussion paper will be brought before the World Radio Conference next year that directly targets 432 to 438 MHz for exclusive use by the Earth Exploration birds.

The threat is very real and now comes word that at least one national ham radio society is taking action to stop the incursion. The South African Radio Relay League which was the first to make information on the threat public is already engaged in urgent talks with the that nations telecommunications regulatory body. Their objective is to try and convince the radio law makers that such a reallocation of spectrum would be a severe blow to the future of amateur radio. Others national societies are expected to quickly do the same. (SARL, Q-News)

RESCUE RADIO: HAMS HONORED FOR TORNADO WORK

Ham radio Radio Skywarn spotters from 14 Central and Southern Indiana counties are being given credit for helping save lives. This, during an unusual outbreak of tornadoes the morning of Friday, September 20 th. Amateur News Weekly's Jack Parker, W8ISH, tracked the storm and has this report.

--
When an F3 Tornado started it's destructive journey across Indiana, Hoosier hams were hot on the trail. In fact, the storm moved so quick several amateur radio operators almost became casualties themselves.

The mid-morning outbreak started as a line of strong thunderstorms associated with a cold front. Tornado touchdowns were reported in several counties southwest of Indianapolis before noon. The storm gained strength as it ripped apart homes and businesses while tossing cars like they were matchbox toys. Many amateur radio operators saw first hand the destructive power of these late summer storms. Around 1:00 p.m., an F3 tornado touched down in Ellettsville, just west of Bloomington, Indiana. Two Ellettsville hams, Mike Poe, KB9SGN, and Russ Ryle, N9DHX, had close encounters with the super strong tornado. According to one Monroe County Spotter "The tornado went right past Mike's house. Poe was in his driveway trying to get away in his truck and wound up dodging parts of his neighbors house while transmitting a warning to the Bloomington repeater. At the same time Russ Ryle was taking cover.

--
Ryle: "I was just passing information for my local area. First report I had was, we had a tornado on the ground. I could see some debris. At that point my wife and I took cover in the bathroom".
--

As many as four tornadoes skipped across Indiana covering 112 miles. Over 20,000 homes were damaged. Thankfully, no one was seriously injured or killed. The National Weather Service office in Indianapolis credited the Skywarn spotters with saving hundreds of lives. As the NWS began to receive frequent damage reports, activation of spotter groups became critical. The NWS requested spotter information be relayed to their office as quickly as possible so counties in the path of the storm could be alerted.

According to National Weather Service Warning Officer, Dave Tucek, quick actions by spotters helped the NWS increase watch and warning lead times to 25 minutes or more, saving lives.

After the storm passed, many of the individual county spotters groups teamed up with their local Red Cross, Salvation Army and Emergency Management agencies to provide communications between shelters and county EOC's. Some of the amateur radio operators found themselves working with damage assessment teams while providing communications for National Guard clean up crews. Reporting from Indianapolis, for Amateur News Weekly, this is Jack Parker, W8ISH

--

Following an aerial survey of the damaged areas, Indiana’s Governor Frank O’Bannon said this is the most wide spread tornado damage to hit the state in over a decade. Damage assessments are expected to be in the millions. (ANW)

## RESCUE RADIO: FCC OK’S NEW PERSONAL LOCATOR BEACONS

If you are a ham involved in search and rescue work, listen up. The FCC has issued a report and order that provides for licensing individual 406.025 MHz personal locator beacons or P-L-B’s. The agency says that it will require mandatory registration of these devices with the National Atmospheric and Oceanographic administration.

According to the CGC Communicator, a 406 MHz digital P-L-B signal contains information on the type of emergency, the country an identification code of the beacon in distress and other information to facilitate search and rescue operations. Even more important, a 406 MHz distress signal can be received and stored on-orbit by the COSPAS/SARSAT satellite and later retransmitted to the ground. That should eliminate the so-called blind spots found in older 121.50 MHz and 243.00 MHz devices. (CGC Communicator)

**

## ENFORCEMENT: YOU GET YOUR OLD CALL BACK

The FCC has written to Jamie H. King, Jr. of New Bern, North Carolina to tell him that it has canceled the Vanity Call Sign W4JHK and has reinstated his previous KG4RLJ call. Amateur Radio Newslines Bruce Tennant, K6PZW has more:

--

Back on June 19th the agency requested that Jamie H. King, Jr., provide documentation of his claim that he was a former holder of the W4JHK call sign. He responded by letters dated July 20th and 27th. In his reply King stated that he believed that the problem seemed to lie in interpretation of blanks to be filled in on the Vanity Call Sign application. He says that when he completed the application last February, he interpreted the line 'Former

Primary Station Holder' to mean any primary station license, regardless of call sign, issued at a date earlier than the application. Therefore he says that he was referring to his previous license KG4RLJ when he checked that line.

But the FCC says that explanation might be acceptable if King had only checked the "Former Primary Call Sign Holder" block. But the FCC says that King also wrote in the call sign W4JHK. Also, that the application block contains the statement -- quote -- "This call sign was previously shown on my primary station license."

The FCC says that in view of the fact that King has never been a former holder W4JHK, that his call sign reverts to KG4RLJ. It says a license bearing that call is on its way to him.

Reporting for the Amateur Radio Newsline, I’m Bruce Tennat, K6PZW
--

The FCC adds that it is not pursuing further enforcement action at this time but cautioned King to use care in the filing of any future applications with the FCC. (FCC)

**

ENFORCEMENT: BIG FINE FOR SELLING ILLEGAL CORDLESS PHONES

The FCC has issued a $7,000 against Lightning Electronics Incorporated of Miami Florida. This, for willful and repeated violations of the Commission's rules involving Lightning's marketing of unapproved long-range cordless telephones. Phones that the agency says are capable of interfering with aviation safety. Phones that hams say are ripping up the two meter band. We have this report:

--
Back in February of 2001, the Federal Aviation Administration told the FCC that some pilots were reporting receiving sporadic interference to an aviation frequency here in the Miami, Florida, area. In March of 2001, the FCC’s Miami Office identified the source of the interference as a long-range cordless telephone being operated from an electronics store in Miami. That one was quickly removed from the airwaves.

As a result of the FAA’s concerns, the FCC launched a nationwide investigation into the unlawful marketing and use of long-range cordless telephones. During the inquiry, the Bureau discovered that electronics dealers were selling long-range cordless telephones in several states. It also found that certain of the long-range cordless telephones caused interference by transmitting spurious emissions on aviation frequencies. Even more scary -- others were specifically designed to operate in the aviation band.

During the investigation, agents from the Miami Office visited Lightning Electronics retail store. This took place on July 27, 2001. While there, agents saw several of the illegal long-range cordless telephones on display. Models included a Super Phone CT-9000, a Prolink CT-6000CID, and an Optima OP8810.

According to the FCC, a salesperson at Lightning offered to sell one of the units to the agents. As a result, on August 24, 2001, the Miami Office issued a citation to Lightning for violation of rules which prohibit the marketing of unapproved radio frequency devices.

But the company apparently did not heed the warning. On September 26, 2001, agents from the Miami Office and from the Tampa Office again visited Lightning's retail store. At that time they purchased a Prolink BAO-6110CID long-range cordless telephone and antenna for $669.80. The telephone the agents purchased was capable of causing serious interference to aviation communications and was not approved for sale by the Commission.

On October 29, 2001, the Tampa Office issued a Notice of Apparent Liability to Monetary Forfeiture against Lightning but the company did not file a response. On February 21, 2002, the Bureau issued a Forfeiture Order. On March 8, 2002, Lightning filed a petition for reconsideration of that order indicating certain information did not pertain to the company. The FCC responded with a new order last May 21st and has now ordered Lightning to pay up.

>From Miami, I'm Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.

--

So far the FCC investigation into the sale of these illegal high power cordless telephones has resulted in the issuance of several citations and fines by the agency's Enforcement Bureau. Its also gotten a few that bothered ham radio communications on two meters off the air. (FCC)

**

## ENFORCEMENT: SBC TO PAY $3.6 MILLION IN CONSENT DECREE

SBC Communications will pay $3.6 million to federal regulators for filing inaccurate information in applications to provide long-distance service in four states. The consent decree resulted from Federal Communications Commission investigations of S-B-C applications to enter the long-distance markets in Missouri, Texas, Oklahoma and Kansas.

In agreeing to the consent decree the company admits no wrong doing. In fact, SBC says that the inaccuracies were the result of good-faith efforts in describing highly technical matters and not the product of any intent to mislead. (Published reports)

## NAMES IN THE NEWS: MITNICK SELLING LAPTOPS TO PAY LEGAL FEE

Former computer hacker Kevin Mitnick, N6NHG, says that he is selling some of his personal items to pay a lawyer who is trying to save his ham radio license. Mitnicks' request to renew his license earlier this year end up in it being designated for a hearing. The items that Mitnick is auctioning off include his old Toshiba laptop computer which was taken by the government back in February of 1995. As this is written, that computer is up on e Bay with a top bid approaching $10,000.

A second laptop is also up for auction. It features a layer of fingerprint dust and red "X" marks where fingerprints were lifted. It also includes a mouse still housed in an FBI evidence bag. Both computers are signed on the bottom by Mitnick and former Apple executive Steve Wozniak. (Published reports)

**

NAMES IN THE NEWS: RAFY BRIEM N6FFT - TALKRADIO LEGEND -- RETIRES

Talk radio legend Ray Briem, N6FFT, has retired. Briem’s last show was on Sunday evening September 28th over Los Angeles radio station KRLA. Before moving to the 870 spot on the AM dial Briem spent several decades honing the art of late night talk over at KABC radio on 790 Kilohertz. While there his show was eventually put on the ABC radio network, nationwide. (ASWLC)

**

NAMES IN THE NEWS: A.PROSE WALKER, W4BW - S.K.

A. Prose Walker, W4BW, the man considered as the father of the "WARC bands" has died. Walker headed up the FCC’s old Amateur and Citizens Division from 1971 to 1975. While there, he made the initial proposal for the creation of the 10, 18 and 24 MHz bands at a conference in Geneva 1972. Later, Walker organized and chaired the United States the Advisory Committee of Amateur Radio. This committee took the initial steps to turn the idea into reality at the 1979 World Administrative Radio Conference.

But there was another side of Walker that hams in the world above 50 MHz do not remember very fondly. It was a set of highly restrictive repeater regulations promoted by Walker back in the early 70’s. Among other things, these rules required the submission of what are today called engineering feasibility studies in order to get a required W-R prefix repeater license. The regulations were so strict that repeater growth almost ground to a halt for the better part of half a decade. Eventually, the ham community lead by 73 Magazine publisher Wayne Green, W2NSD, rebelled against the Walker inspired rules. They were repealed as a part of repeater deregulation a few years later.

Walker was living in Rochester, New York, at the time of his death. He was 92. (ARRL, Repeater Remailer, W9JUV, 73 archives, others)

## ON THE WEB:  INTERNET OUTAGE ON UUNET

If you think that the Internet went away for a few hours on October 3rd, you are close.  What actually happened is that some users faced heavy delays reaching Web sites and accessing e-mail for a few hours because of widespread technical troubles on WorldCom's long-haul network.

A WorldCom' backbone called U-U-NET carries most of the Internet traffic in the United States.  The problems began about 8 a.m. and about 20 percent of WorldCom's U.S. Internet.  Very few if any lost service and Worldcom had service fully restored by early afternoon.  WorldCom says that the problem appears to have been with the lists telling router computers how to pass data on to their destinations.  (Published reports)

## INTERNATIONAL-UK:  BBC AND B SKY B TO LAUNCH ALL DIGITAL TV NETWORK

The British Broadcasting Company and Rupert Murdoch’s B sky B network are teaming up to create a new all digital television service in the United Kingdom.  According to news reports, the terrestrial service called Freeview will be launched on October 30th.  It’s purpose is to fill the void left by the collapse of I-T-V Digital Television.   If successful, it will give Great Britain a let up on the rest of the world by being the first nation with an all digital network.

**

## INTERNATIONAL - NEW ZEALAND: HAM RADIO WALKABOUT

Well known land hiker Tony Whitiker, G3RKL, will be walking in the north island of New Zealand during the month of October. Tony will be walking from east to west and will be on the air using the callsign ZL6WFE.  He will be on the New Zealand national repeater network and hopes to send Slow-Scan Television pictures live via the Internet Radio Linking Project gateways.  (Q-News)

**

## ON THE AIR:  NEW PROPAGATION BEACON FROM FN20

On the air, Steven Kerns, N3FTI, in Reading, Pennsylvania reports over the VHF Reflector that he has established a new 2 meter propagation beacon from grid square FN20. Its on 144.279 Mhz running 4 watts out into a Discone antenna but he plans to change that to a halo in the coming weeks. Steve is also planning a 6 meter beacon to operate from the same location. QSN reports go to Steve at his callbook address. (VHF Reflector)

**

DX

In D-X, VE7XF is going back to the Cook Islands next weak in a muilti-multi operation to take part in the C-Q World Wide DX SSB Contest. He and the gang will operate from Manihiki on North Cook Island as ZK1MA during the event. Before and after the contest they will spend as much time as possible on 6 meter C-W and S-S-B with the call ZK1AKX. Listen for the operation from Manihiki from October 18th to the 31st and then on to Rarotonga South Cook Island from November 1st to the 11th. QSL cards go to Ralph Parker, 5330 Wallace Ave., Delta, British Columbia Canada at postal code V4M 1A1 (GB2RS)

K5AND, W5OZI and W5LXG will be operating from Montserrat from October 31st through November 8th. The trio will be focusing most of their attention on the 6 meter band using a Yaesu FT-897, a 7 element yaggi and radiating about 800 watts out and a Morse beacon on 50.155 Mhz.. From 20 to 10 meters they will run about 100 watts out. They say that the location is ideal for making 6 meter contacts across Europe, Africa and maybe even into the United States. As we go to air the most likely call sign they will use is VP2MJD. If you work them, Q-S-L as directed on the air. (VHF Reflector)

And Nick Peckett, G4KUX, operating as YA4F, has made what he claims is another first-ever contact on 6 meters from Afghanistan. Nick is now claiming that at 11:08 UTC on the 27th of September he worked VK6JQ in Broom, Western Australia for a YA to VK first on the Magic band. (G4NJH)

And G4IUF is on vacation in the Galapagos Islands. He hopesto be active on C-W and SSB from San Cristobal Island through the 23rd of October. He has requested the callsign HC8UF. (RSGB)

**

THAT FINAL ITEM: FIRST 'eDX100' AWARD TO 4Z4DX

And finally this week, word that the first ever 'eDX100' award, issued on the basis of electronic - or 'e QSLs' - was awarded on the 25th of September to Dov Gavish, 4Z4DX of Ramat Hasharon Israel. The ‘eDX100’ award is billed by its sponsors as an electronic equivalent to the ARRL's DXCC but is issued for receiving electronic QSL’s from a minimum of 100 DXCC entities through the eQSL.cc system.

eQSL.cc or the Electronic QSL Card Centre which sponsors the award is operated by Dave Morris, N5UP, of Garland, Texas. It is supported by an advisory board of volunteers around the world.

And true to the nature of electronic QSL’ing, 4Z4DX will be able to print an ‘eDX100’ certificate on his own printer. He will also receive a full-color certificate and a walnut plaque in the mail. (eQSL.cc)

On 19 Oct 2002 22:39:08 GMT, Ron Hardin <rhhardin@mindspring.com>
wrote:

>News flash.  The reason the _DJ story_ has legs is that the story itself
>is entertainment _to you_.  Your side is getting something out of it.  This is
>called economizing it.  Oh! the rush you can get out of outrage and calling the
>station!  What caring people you are!

OK, let's get a few things straight here.

#1 - I didn't "express outrage" over that story or "call the station".
I think it's a pretty sick example of what a "shock jock" will do to
get ratings and attention, but that's about all I've said about it.  I
was *solely* talking about YOUR position that the woman should have to
"buck up and take it".

>I am rejecting that where it starts.  The right course is to respect
>the woman's position and say she can deal with it as appropriate;
>the story is not moral entertainment for me and should not be for you either.

Mr. Hardin, you have absolutely no idea what that woman, the widow of
the baseball player, is going through.

>Imus encountered the story on his Scum Report, took the position that it was bad
>behavior on the part of DJ or audience, and McGuirk added ``Arizona
>Morning Zoo.''
>
>He didn't offer sympathy to the woman nor did he have the position to do so;
>just commented on the demographics.

And that's basically what I've done.  I only commented on YOUR
position.  You don't know what she's going through...for that matter,
although I have experienced the loss of a very close relative in the
past year, neither do I.  Your callous statement "oh, she should buck
up" is ridiculous.  I would like to think that we in the media
industry should at very least have our own, self-defined "lines" about
what we do to get attention and ratings.  Before you go off on a rant
there, I said *self-defined*, not regulated, etc.

>The popular line is clear enough.  That's how the story has legs.  It
>infantilizes the woman however, which you guys are very happy to do in
>support of your own self-satisfaction.

"Infantalizes" the woman?  What kind of world do you live in, Ron?

In your world, are people allowed to grieve over their losses without
being characterized as being "weak"?  Are people allowed to deal with
their losses without some "infantile" radio personality digging up
their story for a quick ratings and publicity hit?  What kind of world

DO you live in, Mr. Hardin? Where is the decency in it, the mere respect for human feelings and loss? Or is everything "open season"?

Mike

It's not to my taste either, but I gather it is not meant to be, or rather it is meant not to be. That's the attraction to their demo, it offends us. It says: in some matters, let us alone.

I agree with their sentiment; the do-gooder won't ever leave you alone, unlike a simple thief or louse, who merely takes what he wants and disappears.

Decency and respect are harder than you think.

It looks as though the IBOC sidebands are causing high-frequency noise in your radio. Remember that FM stereo is broadcast by encoding the difference between the left and right channels onto a 38 kHz subcarrier whose spectrum covers from 23 to 53 kHz. If the noise caused by the IBOC falls in that frequency range but drops off in intensity at lower frequencies, then you will have clean mono reception but hissy stereo. I think that an even more interesting question is: how will IBOC affect a station's ability to provide SCA subcarriers? SCA subcarriers are even higher in frequency than the stereo information, typically 67 kHz, and they are transmitted at a low modulation level. I think that there could be some real problems here.

The product is radio programming. The audience is the consumer.

Since radio has a bimodal marketing model, there is a second consumer who
buys the product because of the audience. So, to an advertiser, the product
is the audience attracted by the programming. To the listener, it is simply
the programming.

I received this the other day, and am posting here to explain my question,
although it might be on topic for the group. :

Does anyone have any idea how Rush is doing ratings wise around the country?

--Jay Scott

Please read the content no matter what you think of Rush
Subject: FW: Interesting info from Rush
By Rush Limbaugh, March 11, 2002

I think the vast differences in compensation between the victims of the

September 11th casualty, and those who die serving the country in uniform, are profound.

No one is really talking about it either because you just don't criticize anything having to do with September 11th. Well, I just can't let the numbers pass by because it says something really disturbing about the entitlement mentality of this country.

If you lost a family member in the September 11th attack, you're going to get an average of $1,185,000. The range is a minimum guarantee of $250,000, all the way up to $4.7 million.

If you are a surviving family member of an American soldier killed in action, the first check you get is a $6,000 direct death benefit, half of which is taxable. Next, you get $1,750 for burial costs. If you are the surviving spouse, you get $833 a month until you remarry. And there's a payment of $211 per month for each child under 18. When the child hits 18, those payments come to a screeching halt. Keep in mind that some of the people that are getting an average of $1.185 million up to $4.7 million are complaining that it's not enough.

We also learned over the weekend that some of the victims from the Oklahoma City bombing have started an organization asking for the same deal that the September 11th families are getting. In addition to that, some of the families of those bombed in the embassies are now asking for compensation as well. You see where this is going, don't you? Folks, this is part and parcel of over fifty years of entitlement politics in this country. It's just really sad.

"Patriotism is not a short and frenzied outburst of emotion but the tranquil and steady dedication of a lifetime." --Adlai E. Stevenson, Jr.

Every time when a pay raise comes up for the military they usually receive next to nothing of a raise. Now the green machine is in combat in the Middle East while their families have to survive on food stamps and live in low rent housing.

However our own U.S. Congress just voted themselves a raise, and many of you don't know that they only have to be in Congress onetime to receive a pension that is more than $15,000 per month and most are now equal to be millionaires plus. They also do not receive Social Security on retirement because they didn't have to pay into the system.

If some of the military people stay in for 20 years and get out as an E-7 (Enlisted Sergeant equivalent) you may receive a pension of $1,000 per month, and the very people who placed you in harms way receive a pension of $15,000 per month. I would like to see our elected officials pick up a weapon and join ranks before they start cutting out benefits and lowering pay for our sons and daughters who are now fighting. Consider this.... Our Senators/Congressmen do not pay into Social Security, and, therefore they do not collect from it. Social Security benefits were not suitable for them. They felt they should have a special plan.

Many years ago they voted in their benefit plan. In more recent years, no congress person has felt the need to change it. After all, it is a great plan. For all practical purposes, their plan works like this: When they retire no matter how long they have been in office, they continue to draw their same pay until they die, except it may be increased from time to time by the cost-of-living adjustments. For example, former Senator Bill Bradley (New Jersey) and his wife may be expected to draw $7,900,000.00 over an average life span,with Mrs. Bradley drawing $275,000.00 during the last year of her life. Their cost for this excellent plan is "0," nada, zilch.

This little perk they voted in for themselves is free to them. You and I pick up the tab for this plan. Our tax dollars at work! Social Security, which you and I pay into every payday for our own retirement, with an equal amount matched by our employer, we can expect to get an average of $1,000 per month. Or, we would have to collect our benefits for 68 years and 1 month to equal the Bradley's benefits.

Imagine for a moment that you could structure a retirement plan so desirable, a retirement plan that worked so well, that Railroad Employees, Postal Workers, and others who were not in the plan would clamor to be included. This is how good Social Security could be, if only one small change was made. That change would be to jerk the Golden Fleece Retirement Plan out from under the Senators/Congressmen. Put them into the Social Security plan with the rest of us. Watch how fast they fix it!!!

If enough people receive this maybe a seed will be planted, and maybe good changes will evolve.

Don't forget, our girl, Hillary Rodham Clinton, thanks to the infinite wisdom of New York State voters, now comes under this Congressional Retirement Plan. Talking about the Clinton's, it's common knowledge that, in order for her to establish NYS residency, they purchased a million + house in upscale Chappaqua, NY. Makes sense. Now, they are entitled to Secret Service protection for life. Still makes sense. Here is where it becomes interesting. A residency had to be built in order to house the Secret Service agents. The Clinton's now charge the Secret Service rent for the use of said
residence and that rent is just about equal to their mortgage payment, meaning that we, the tax payers, are paying the Clinton's mortgage and it's all perfectly legal.

How many people can YOU send this to ...

I am amused that in many cases, some of the smallest stations in the smallest markets have the most impressive tower structures. Sutro tower in San Francisco is an exception to this rule, but generally the largest stations for whom I have done work are simple antenna mounts on masts on top of high-rise buildings, or short towers on mountain tops. On the other hand, some rather small-time stations end up on these impressive multi-hundred meter sticks.

Screw what up? The quantity of the audience? The quality of the
audience? Do you honestly believe that a customer (sponsor) who objects
to tastelessness will damage either?

Are you countering my assertion that programming is influenced to a
significant degree by advertisers, or simply attempting to pass a value
judgment on it?

I have a ham friend up in Toronto who's ask me to try and fill him in on the low power HF operators in Canada.

He asks:

CFRB in Toronto used to have an outlet on 6070 but have not heard it in some years.  A Montreal station also had one, CFCF but it has been gone for years.  Tell me a bit more, I am well plugged in to what goes on here and HF outlets at low power is a totally new thing to me......
Tell me a bit more......

I wonder if anyone here on the ng can enlighten both of us?

Are such licences still offered or were they an optional extra with a new AM/MW licence?

Is there a website with more info on these from the authority's perspective rather than the DX'ers?

Thanks.

Amateur Radio Newsline™ Report 1314 – October 18, 2002

Amateur Radio Newsline report number 1314 with a release date of Friday, October 18th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.

The FCC tells ham radio its not going to have to share 2300 Mhz.  This story is first on Amateur Radio Newsline report number 1314 coming your way right now.

(Billboard Cart Here)

**

SPECTRUM ISSUES:  FCC SAYS NO TO 2300 MHZ SHARING

First the bad news.  The FCC has dismissed an ARRL petition that sought primary status for amateurs in the 2300 to 2305 MHz.  Now the good news.  The Commission has also turned down a paior of petitions from commercial interests that had hoped to share the spectrum with Amateur Radio. Amateur Radio Newsline's David Black, KB4KCH has more:

--
It's not just ARRL that the FCC turns down. The Commission also dismissed petitions from MicroTrax and AeroAstro--both groups had sought access to 2300 to 2305 MHz. The FCC says it's denying the two commercial applications in part because appropriate spectrum is already available elsewhere. And, according to the Commission, neither company had demonstrated a need for additional spectrum.

By way of background, an ARRL bulletin says that MicroTrax had wanted to establish a Personal Location and Monitoring Service between 2300 and 2305 MHz. The petition by AeroAstro asked to share the band on a co-primary basis with Amateur Radio. AeroAstro wanted to launch its Satellite Enabled Notification System messaging service.

But the Commission says AeroAstro's request did not go far enough in protecting other serevices. The agency was particularly concerned that NASA's Deep Space Network would not be protected by the modified out-of-band limits AeroAstro had proposed.

The FCC says that -- at least for now -- amateur weak-signal communications in the 2300 to 2305 MHz band will be protected if the amateur allocation remains as secondary. The Commission says band will remain in its spectrum reserve. The status quo will be maintained, then, until the FCC re-evaluates the status of the frequencies in relation to the Amateur Service at some point in the future.

For the Amateur Radio Newsline, I'm David Black, KB4KCH.
--

The 2300 to 2305 MHz band is allocated to Fixed and Mobile services on a primary basis and to the Amateur Service on a secondary basis in all three International Telecommunication Union regions. The Radiolocation Service has a secondary allocation in the band in Region 1, and a primary allocation in Regions 2 and 3. (ARRL)

**

RESTRUCTURING: NETHERLANDS MAY SAY GOODBYE TO MORSE TESTS

Im Bill Pasternak, WA6ITF, with some late breaking news. It comes from the Netherlands where the Morse code could soon be going away. RSGB News reader Jeramy Boot, G4NJG, has the details:

--
The Netherlands is set to abandon the Morse code test next year. Rob van den Ent, PE9PE, reports that the Netherlands' national amateur radio convention took place the 12th and 13th of October. He says that the Dutch radio regulatory authority used the occasion to announce that if, as expected, Morse code is lifted as a mandatory requirement for an HF licence at nextyear's World

Radio Conference, the authority would immediately eliminate the Morse code test in the Netherlands. At the same time, current VHF licensees would get direct access to the HF bands without further examinations.

--
More on this story in future Amateur Radio Newsline reports. (GB2RS)

**

## RADIO REGULATIONS: BIG CHANGE AT THE ITU RADIOCOMUNICATION BUREAU

Ham radio has lost an significant post in the area of setting world radio policy. This, as a non radio amateur is selected to head up an important aspect of the International Telecommunications Union. From Brisbane Australia, Q-News Graham Kemp, VK4BB, has the details:

--
Valery Timofeev has been elected director of the International Telecommunication Union -- ITU -- Radiocommunication Bureau. Timofeev, who is Russia's deputy minister for communications and informatization, has extensive experience in radio frequency spectrum management at both the national and international levels.

Timofeev's election does mean for the first time in at least three decades, an non-Amateur Radio licensee will head the ITU Radiocommunication Bureau. The election took place during the 6th ITU Plenipotentiary Conference now under way in Marrakesh, Morocco. The meeting concludes October 18th.

>From Q-News Australia, I’m Graham Kemp, VK4BB, reporting for the Amateur Radio Newsline.
--

The political signifigance of this change is obvious. Having a ham radio operator in this position gave the service considerable leverage in negociations involving spectrum issues. (Q-News)

**

## RADIO REGULATIONS: HAM RADIO GAINS OBSERVER STATUS AT THE IARU

The International Amateur Radio Union now has observer status at ITU meetings. IARU President Larry Price, W4RA, was on hand to represent the organization at at a major ITU gathering which was held in Marrakesh Morroco in late September. And Region 2 Executive Committee member Tim Ellam, VE6SH, is now participating on behalf of the organization. (Q-News)

**

## THE WAR ON TERROR: COMMUNICATIONS STANDARDS ADOPTED

Back here in the United States, the communication industry has adopted emergency procedures intended to help maintain the nation's telephone, cable and Internet networks in case of a natural disaster or terrorist attack. The procedures were developed by a council of more than 50 industry officials formed by the Federal Communications Commission in January.

The group adopting the standards is called the Network Reliability and Interoperability Council. Their job was to recommend ways to strengthen communications networks to resist attack. The plan all have now agreed to will help companies in a crisis contact and work with partner firms to keep services running. (NRIC)

ON THE AIR: IRLP NODES TO GET AN EXTRA DIDGIT

Changes are in the air for those of you involved in internet radio linking. This, to permit an increase the number of possible I-R-L-P nodes to over 99 000.

Right now most I-R-L-P users will not notice any difference. Eventually IRLP node codes will increase from three numbers to four. The result is that node 640, for example, will become 6400. ( G6PHF/Bass IRLP Group via APC News)

**

ENFORCEMENT: FOUR LICENSES CANCELLED IN EXAM INVESTIGATION

Turning to enforcement news, a group radio amateurs who did not show up for a retest are no longer membewrs of the ham fraternity. The FCC’s Daryl Duckworth, NN0W, explains:

--
Duckworth: “As a result of an audit by the Enforcement Bureau of the September 1st 2001 examination session given in Yucaipa California by the W5YI VEC, the Wireless Telecommunications Bureau has cancelled the licenses of four who did not appear for a retest. Those are Technician Camito E. Lopez KG6GJG and General class licensees Marcileno Llanes KG6HBR, Manual Vega KG6GSP and Marcial Rivas KG6HCP.
--

Duckworth says that the investigation into the exam session continues. (FCC, RAIN)

**

ENFORCEMENT:  KENYAN PIRATES OFF THE AIR

Still in the enforcement arena, ham radio in Nairobi Kenya have gotten some relief from illegal operators.  Kenyan Intruder Watch Coordinator Ted Alleyne reports that five High Frequency stations have been confiscated.  Also, the operators of a Nairobi travel agency that was using 2 meter amateur frequencies were caught and equipment has been siezed.  (Q-News)

**

ENFORCEMENT:  IRANIAN JAMMER UPDATE

The 40 meter Iranian jammers we recently reported on are still being heard. Intruder Watch Regional Coordinator Martin Potter says that the jamming is being done to a low power station called Radio Mujahed.  It’s being head in 10 Kilohertz steps from 7 point 010 to 7 point 090 Mhz.  Potter says that S-W-L’s may find the same situation in the broadcasting frequencies as well. (Q-News)

**

NAMES IN THE NEWS:  FCC CHAIRMAN POWELL COMMENTS ON MEDIA OWNERSHIP

Some names in the news.  First is FCC chairman Michael Powell.  He  has warned that rules on media ownership will probably be struck down by the courts if they aren't modified to account for sweeping changes in the media landscape over the past 30 years. Powell's comments came shortly after the FCC released the results of studies suggesting that many ownership rules are outdated. The studies mark the foundation of the FCC's review of key rules on media ownership.  (ComOnline)

**

NAMES IN THE NEWS:  CULTURAL RESOURCE SPECIALIST NAMED

The C-G-C Communicator reports that Dr. Amos J. Loveday, Jr. has been appointed as the "Cultural Resource Specialist" in the F-C-C’s Wireless Telecommunications Bureau's Commercial Wireless Division.  His job will be to insure that tower and antenna siting projects comply with the requirements of the National Historic Preservation Act of 1966.  He will also assist the FCC in establishing a closer working relationship with Native American Tribes and Native Hawaiian Organizations.  (CGC Communicator)

**

NAMES IN THE NEWS:  KB5HAV APPOINTED ASST MGR OF HURRICANE WATCH NET

Bobby Graves, KB5HAV, of Pearl, Mississippi, has been named as the Assistant Manager of the Hurricane Watch Net. According to the ARRL Letter, Graves appointment was announced by Mike Pilgrim, K5MP, who is Manager of the net. More information is on the web at www.hwn.org (ARRL)

**

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

RESCUE RADIO: AOL SIGNS ONTO AMBER ALERET SYSTEM

The worlds largest Internet service, America Online, says that it will soon begin transmitting Amber Alerts. The service says that the alerts about abducted children will show up on the screens of computers, pagers and cell phones of more than 26 million of its subscribers in dozens of states and cities beginning in early November. Warnings issued by most communities that use the system will go to AOL users in those areas who request to receive them. All but one of the existing Amber Alert systems are participating in the America Online project. (AoL)

**

EMERGING TECHNOLOGY: X-RAY EYES

If you thought only cartoon super-heros like Superman could see through walls to detect the villains, guess again. New technology called ultra-wideband will soon allow mere mortals to detect objects buried underground and to build cars enhanced with sensors that help avoid collisions.

According to press reports, ultra-wideband uses millions of narrow pulses each second to get an accurate reading of location and distance, opening the door for new applications in radar tracking, precise positioning and wireless communications. The possibilities vary from short-range computer networking for homes to devices that determine the location of golfers on a course.

What regulators like even better is that ultra-wideband devices can work within frequencies already allocated for other radio services -- helping to maximize this dwindling resource. The Federal Communications Commission believes the technology is so promising that the agency has proposed allowing it to be used on an unlicensed basis.

But it may be a while before the new technology is available. First, government agencies and private groups are testing to make sure ultra-wideband can safely coexist with other services, like the Global Positioning System. More information is on the Ultra-wideband working group website at www.uwb.org (Science Today)

**

## HAM RADIO IN SPACE: PCSAT - HELP NEEDED TO BUILD A NEW BIRD

Bob Bruninga, WB4APR, of the P-C-sat Project Team has put out a call for an antenna designer for the next generation of this type of ham satellite. According to Bruninga, to get a free ride to orbit for P-C-Sat the satellite must fit inside of a perfectly spherical but totally passive mirror surfaced 18 inch diameter ball. Also, the antenna must be totally internal with no external protrusions.

To make it happen, the P-C-Sat team at the US Naval Academy Satellite Lab, needs a good RF designer and antenna modeler to help out. If you can help, please contat Bob Bruninga by e-mail to wb4apr@amsat.org. P-C-Sat is scheduled for launch in less than a year. (AMSAT BB)

**

## RADIO IN SPACE: GOVERNMENT CONTRACTS FOR NREW WESATS

The government has selexcted TRW Space and Electronics to build the fleet of next generation weather satellites. The Redondo Beach California unit of Cleveland Ohio based company will build two satellites with options for up to four more.

Eventually six new polar-orbiting satellites will collect data on the Earth's weather and climate, as well as its land, oceans and atmosphere. The birds will go into orbit between 2009 and 2018. The contract to build the new weather satellites is worth up to $4.5 billion dollars. And that’s billion – with a B. (Published reports)

**

## INTERNATIONAL – AUSTRALIA: THE CB MOUNTAIN CHALLENGE

Turning to the international pages, C-B operators in Australia are about to embark on what is best described as a cross between an emergency training operation and a contest. Its called the Mountain Challenge where the object is to accurately pass a message around the state of Victoria using C-B radio.

It will all take place on Saturday the 30th of November. Both 27 MHz and U-H-F C-B radio is used to get the message through. And this year the event will extend beyond Victoria, with C-B’ers in Mount Gambier and Tasmania having expressed interest in taking part.

Find this interesting? Want to learn more? Well you can – on the web at www.mrc.cat.net.au. (Q-News)

**

## INTERNATIONAL - AFGHANASTAN: KANDAHAR GETS TV

A new television station in Kandahar Afghanastan is being called a resounding success. This even though the signal is so poor the Afghan musicians shown in the first broadcast looked like grainy, quivering ghosts. According to Abdul Ali who heads up broadcasting in Kandahar, all of the equipment is than 20 years old and had not been used at all during the years that the Taliban ruled the country. (Media Network)

**

INTERNATIONAL - CANADA: VE3CT WLECTED QCWA PRESIDENT

For the first time in the history of the Quarter Century Wireless Association a Canadian radio amateur has been elected as its president. Croft Taylor VE3CT , who previously served as vice president, assumed office on September 1st and will serve a two year term. The QCWA was founded in 1947. You can learn more at www.qcwa.org (RAC)

**

DX

In D-X, A group of five American operators will be active using ZK1 callsigns from Manihiki in the remote North Cook Island group through the 31st of October. They will be active on 6 to 160 metres on CW, SSB and RTTY. During the CQ World Wide SSB Contest on the 26th and 27th of October they will use the callsign of ZK1MA. (GB2RS)

9V1SM is Sasi, a new operator from Singapore. He is active on all bands from 40 to 6 metres, mainly on SSB. He also plans to start PSK-31 operation in a few week's time. (RSGB)

Lastly, the new address for the ARRL W 5 Incoming QSL Bureau is O.K.D.X.A, PO Box 2591, Claremore, Oklahoma 74017-2591. If you have cards for W-5 land, send them there. (ARRL)

**

THAT FINAL ITEM:

WITH THE SCOUTS: JOTA THIS WEEKEND

This weekend, the 19th and 20th of October, is the scouts Jamboree on the Air, or JOTA. Bruce Tennant, K6PZW, tells us what its all about:

--

The Jamboree on the Air is an annual event. Every October a half a million Scouts and Scout Guides all over the world take to the airwaves to make contact with each other by means of Amateur Radio.

The World Scout Bureau owns and operates its own Amateur Radio station. The the call sign H-B-9-S and it operates from a permanent radio room located in its offices in Geneva Switzerland. The station normally operates during Scout Nets and other major scouting events like the Jamboree On The Air. This year, the station is active on 160 through 10 meters in a number of languages.

Here in the United States, the big JOTA gathering takes place at Camp Wisdom near Dallas, Texas.  The call sign to listen for from there is K2BSA slash 5. Other stations expected to take part include GB2GP in London England and JA1YSS from Tokyo Japan.

If you are hearing this newscast before or during this years Jamboree on the Air, get on the air and show your support of the worlds youth and of scouting by making contact with a J-O-T-A station.  Who knows, it could evenb be HB9S.

For the Amateur Radio Newsline, I’m Bruce Tennent, K6PZW, in Los Angeles.
--

Again, this weekend, the 19th and 20th of October, is the 2002 Scouting Jamboree on the Air.  And if you are hearing this newscast later in the week we hope you had time to contact a Jamboree station.  (ARNewsline™, Q-News, GB2RS)

John Higdon <no-spam@amadeus.kome.com> wrote:

"Screw what up? The quantity of the audience? The quality of the audience?
Do you honestly believe that a customer (sponsor) who objects to
tastelessness will damage either?"

In fairness, there have been some extreme examples of advertisers' meddling over unbelievably trivial things.  One was the famous incident where the American Gas Association, sponsoring a drama about the Nuremburg war crimes trials, demanded that all mentions of gas be bleeped out.  Another was when "What's My Line" was sponsored by Marlboro, and the ad agency rep objected to a reference to the Israeli parliament -- since Parliament was a competing brand.  Still another case was when another agency rep objected to a reference to someone being "at the zenith of his career," since the show was sponsored by Philco.

But my gut feeling is that, when advertisers raise hell over content, they usually have a good reason for not wanting to be associated with something that would offend their customers.

Tonight just before sunset in Ohio there was _strong_ digital-sounding hash on the upper sidebands of 660 kHz and 1210 kHz; I'm guessing something Chicago-area on 670 and 1220 IBOC?  I should have checked 680 LSB, which would be an almost open channel, but failed to do so.

Nulling WFAN NYC 660 and WPHT 1210 Philly did not null the hash, so it's coming from some other direction.  The lower sidebands were clear.

Things are going to get pretty grim if this is what it is, digital from
the sunward direction contaminating the nightward direction.

My filters were probably catching 660-663 kHz and 1210-1213 kHz signals.

Is there a good internet listing of radio stations, formats and contact numbers...something along the line of the M Street Jopurnal but on the net?

As a general rule, DJs and talkshow hosts who are fired due to controversy are almost guaranteed offers from other stations immediately. Anyone who takes solace from a show host being fired after doing something he considers in bad taste or worse should realize that such a dismissal is usually tantamount to a promotion.

July 9, 2002

To whom it may concern,

My name is David Best and I hold a diploma in Recording Engineering from Fanshawe College and I am currently seeking employment in the audio industry.  My main interest is in doing postproduction work.

My goal is to secure an entry-level position with your production studio in order to further my skills as a professional in the music industry.  As an employee I can offer my school training as an audio engineer and the real world experience I have gained working as an independent producer and composer.  Working independently I have begun to develop my audio editing skills, and more importantly gained the motivation to make a bigger investment in those skills.  I believe that my training and my strong desire and ability to learn more will make me an asset to your studio.
Any opportunities that you have either part or full time would be of great interest to me.

Sincerely,

David Best
Enclosure (1)

## Skills

� Experienced recording engineer and audio, video, and broadcast system technician
� Knowledgeable technician for multi-language computer systems
� Ability to successfully troubleshoot and repair complex technical systems
� Ability to quickly adapt to new software applications

## Education

2000: Recipient of diploma in Recording Engineering and Music Production from Fanshawe College.

September 2001-May 2001: Completed one year of studies in Electrical Engineering at Ryerson University

## Related Work Experience

September 2001- Current: Independent - Music Producer / Editor and Musician
� Recording / Production / Editing for solo artists, dancers, religious ceremonies
� Live performance as drummer for dancers
� Music production for art installations
� Assembly of portfolio demos
� Kids / seniors / special needs music workshops

January 2001 � June 2001: Inscriber Technology - Quality Assurance and Testing
� Tested various broadcast software application such as VMP, E-clips, and Title Motion
� Maintained WinNt / Win98 workstations with various audio/video, broadcasting, networking and office related Hardware in a wide variety of foreign languages.
� Worked closely with developers on audio related issues
� Head tester for Discreet Logic related products
� Extensive use of Discreet Logic Edit* and Adobe Premiere

May 2000-January 2001: Sonomax Inc.- Acoustic Research Assistant
� Testing of hearing protection and enhancement devices
� Troubleshooting testing procedures and environments
� Tool design and fabrication

## Interests and Activities

� Perform with Toronto Gamelan.
� Currently study African djembe and Middle Eastern percussion
� Avid yoga and meditation practitioner
� Interest in alternative and ecologically sustainable living environments and building design

It's pretty damned hard for a shock jock to get fired, but when one does, I think most of them have difficulty picking up from where they left off.

The classic example that comes to mind is Doug Tracht (AKA "The Greaseman"). Within the last year or so, his presence while sponsoring events in Frederick, MD caused other sponsors to pull out. He's living proof that if you say something toxic enough, you won't get much more than a third rate show on some poor coverage MW AM station. I wouldn't bet much on Opie and Anthony's future either.

I'd be interested if anyone can cite cases to the contrary. The only one I can think of was Howard Stern. His reputed mis-step in DC ("How much for a ticket to the 14th street bridge?"), though shocking, was hardly the degree of insult that was perpetrated by the previous two examples.

Any others?

My local NPR station, WETA-FM in the Wash., DC area, has been testing the IBOC system of iBiquity. I find that when I listen to the station there is a 'hiss' when listening in stereo, but not in mono. The station engineer helped show this was due to the IBOC signal by turning it off and on, and the hiss dispappeared when off.

I want to find out if this is a frequent effect of IBOC transmission. I have a new Onkyo TX-8511 receiver. The station is only 10 miles away, and it
is the most powerful one in the area. I had a Yamaha receiver, and the hiss did not appear on it. So, is my receiver mistuned (Onkyo said that the
tuner can be tweaked to a narrower bandwidth, but this would probably reduce the dynamic range of the sound, wouldn't it?), or is this a more
general effect of IBOC, and appears with some receivers but not others?

I read in today's Washinton Post  http://www.washingtonpost.com/wp-dyn/articles/A63499-2002Oct9.html that the FCC is going to rule tomorrow
on permitting IBOC broadcasting. It may be too late for the individual to have his/her voice heard, but I'd like to resolve this issue for my listening.

TIA.

The Greaseman did not commit an offense against taste, but against race.
That is obviously held in a different light.

O&A, the Phx guy, Big Boy in LA, all have done tasteless things lately. All
were either fired or admonished. All will work again.

Howard was not fired for that, per his PD. Again, tasteless only.

I know of several jocks fired for questions of taste... wasn't Bubba one of
them?  And all got gigs elsewhere quickly.

It wasn't shocking to me.  In fact when I heard of it I thought it was a good joke, against all the fake concern but really voyeuristic entertainment value plane crashes generate.  A classic.  It offended exactly the right people, the ``news'' media and its ``caring'' audience.

I don't listen to Stern though, evidently for a different demographic than mine.  Stern's even on locally and Imus is a difficult DX catch, which I work at instead.

I don't think the call to the widow matters either, it's just something people enjoy getting offended by.  Both the call and the reaction are aimed at a different demographic.  You'd have to be careful about the widow thing: is she economizing her widowhood, playing it for what she can get for it?  That's the sort of thing to consider before deciding to take a poke at her.  I don't know one way or the other.  I haven't heard anybody consider it.  There's a morality of practical jokes, which the people who are offended at least are ignoring; and perhaps the offenders were too, I don't know.

I don't think people realize what entertainment is; one thing that entertains is tragedy - millions tune in to watch and you can sell them stuff.   And the prospect of being outraged is an attraction, another entertainment, for the bluenoses.  Geez, people writing letters to a radio station.

Flip the damn thing off, is my advice.  Be a nonparticipant.

But then I like bluenoses being offended myself.  They have it coming.  So I listen to John and Ken, and Imus, hoping for the best every day.  At the moment John and Ken are getting death threats from the longshoremen's union and doing a fine job of generating calls from outraged trailer-park dwellers.  Imus isn't doing much of anything but the odd poke at a news personality.

All of the ones I know of in the SF area certainly did.

That said, there are egregious acts that can damage a career, e.g. racial, ethnic, and (in the Bay Area) homo slurs. Furthermore, anything that damages revenue is also very serious.

The afternoon jock on a local station quipped, in response to a kidnapping in which the victim got away, that HE would have used nylon rope and/or duct tape and mentioned that these items could be obtained in abundance at Orchard Supply, a local hardware chain. Orchard Supply pulled its spots on the station in short order, and the DJ got a very serious reprimand. The issue was revenue rather than taste.

And O&A wasn't an offense against Catholics? I suppose you could argue that religion is optional but race isn't. Still, I'd be hard pressed to call what they did merely "tasteless." It will be interesting to see where and when they turn up next.

My question wasn't whether these guys would work again, but where and in what sorts of markets.

That was going to be one of my examples. Also, Perry Stone went from San
Jose to San Francisco (same market, more pay) after making lewd comments
about Girl Scouts who were in the studio.

Hmm...I don't see analog stereo AM as being offered on AM-hybrid
operation. In other words, I don't think it is even supposed to work.

Is it in stereo?

> So, is my receiver mistuned (Onkyo said that the

> general effect of IBOC, and appears with some receivers but not others?

My guess would be the stereo operation of the hybrid station. The stereo
signal depends upon phase modulation of the transmitter and so does the
IBOC signal. The opportunity for interaction is certainly there.

And as I said, none of the models in my big notebook from the
Harris/iBiquity dog and pony show indicate stereo analog operation.

his/her voice heard, but I'd like to resolve this issue for my listening.

It's not too late. If people don't buy the damned radios, IBOC will go the
way of AM stereo.

I remain very skeptical about IBOC. I've recommended to my employer that
we wait and see how other stations fare with it before spending any money
on it.

Like the person near North Creek, NY, I too had an external FM radio antenna, when I lived at Troy, NY during the 1970s. Then, the area only had a handful of local FM stations, and I could pull in very many within a 100 mile radius, and with acceptable quality. Stations beyond 100 miles would come in sporadically. Only during Skip conditions did I receive stations beyond 200 miles.

As the number of local FM stations increased in Troy, the usefulness of the antenna declined. Strong signals would overload the FM receiver, decreasing its sensitivity.

But that's good stuff, moving the thing into another context for
humorous effect and by reflection illuminating the original ``breaking
news'' fiction.  It's entertainment in both frames.

Nobody admires PDs.

The thing to do is ban ads from Orchard Supply for a short time.

Yup. Can I blame this on the Alzheimers?

Yes, how embarrassing. In my defense, in addition to my advancing age,
the matter of AM stereo has been an immersion topic at work lately.

Kind of makes one want to crawl back in his hole.

So; this is new to me, so pardon my ignorance. Does this put AM quality on equal footing with FM ? I assume AM may now have an advantage as the signal goes further. How is it done, I assume the regular modulation is left alone and a MP3 type signal is encoded . How is this done? I went to their site but it didn't tell me very much . Is it another modulation on the carrier?

Sure, if you will tell us why "the matter of AM stereo has been an
immersion topic at work lately"?  You are known to hostile to AM stereo,
and in any case I thought AM stereo was well buried in the US?  Inquiring
minds want to know why you of all people would be immersed in AM stereo?
Or am I confusing you with someone else, in which case blame it on
Alzheimer's?

I should point out that while Perry Stone did indeed move from KSJO to
KITS ("Live 105") to replace the -er- vacationing Alex Bennett,  he
didn't last long there, either.  Beats me where the heck he went after that.

For sale:

Partial ownership of fulltime AM in Idaho. The "Radio Crazy: is back. (Crazy as the Fox, that is!)

1 KW, small market. Cheap.

Joint venture (Does this venture send you to the joint!! Nope!) grin!

Active or inactive investors with $10,000 or more are welcome. No investor can own more than 49 percent. This includes me!

All investors would be on the board with full voting rights if desired.

This station can upgrade to 50,000 watts days, nondirectional!

FCC just approved IBOC digital AM during the daytime! Be advised.

(478) 741-1710 in Macon, GA.

Please! No "AM bashers" or other "negative nabobs"!!!

If you can't stand AM, please go elsewhere and "flame" somebody else!

73,

Meyer Gottesman, W6GIV aka "The Radio Crazy"

Certainly not, if audio fidelity is the issue.  The AM IBOC demo I
heard at last year's NAB was unbelievably awful.  Sounded little
better than RealAudio on a 28.8 modem.  I would rate it as
unlistenable.

No, the bit-rate compression on AM will be more drastic than on FM.

>  I assume AM may now have an advantage as the signal goes further.

No, in most cases, since the digital will be less powerful and also occupy half of each first adjacent channel.  The industry study group recommended that AM digital NOT be used at night because of the interference it creates to the first-adjacents.  Most full-power FM stations cover farther than most AM stations - except the Chicago AM powerhouses and a few others.

> How is it done, I assume the regular modulation is
> left alone and a  MP3 type signal is encoded.

No, the regular analog modulation will have its high frequencies attentuated to help allow space for the digital signal.  AFAIK, the digitization is considerably different from MP3.

> How is this done?  I went to
> their site but it didn't tell me very much .   Is it another modulation on
> the carrier?

In most cases I'd expect a separate digital transmitter multiplexed onto the station's antenna system.  Most/many AM transmitters are not wideband enough to handle the digital as well as analog modulation.

FM digital apparently sounds at least as good as analog FM, and won't bother other local stations, in most cases, because of the existing FM allocation scheme. [Except in cases like Baltimore/Washington with a number of first-adjacent allocations.]  FM digital receivers will revert to using the analog signal in poor-reception areas.

As the FCC said, "a win, win situation" [my comment - same content, more interference, higher cost, revert to analog when the going gets rough].

Ray: The AM IBOC signal digital signature is a very complex issue. There is a series of digital carriers 12 dB down spaced out in the sideband area of the signal. Take a look at the pdf file:

http://www.nab.org/scitech/AM_All_Digital_Report.pdf

This is fairly comprehensive and should explain it in some technical detail.

Ray:

The other post I made to your message contained test results on the WTOP and the Ibiquity test transmitter in Ohio. Primarily, this report was trying to show the effectiveness of the all digital mode versus the hybrid mode which I assume will be the mode adopted by US broadcasters, at least at first. It's interesting but not that informative about the system.

The report: http://www.nab.org/scitech/amibocevaluationreport04062002.pdf

This is a far more comprehensive report than my earlier post. It will take you deep into the details but is 61 pages of pdf.

I'm not sure this is really completely up to date. Ibiquity has been experimenting with the digital compression algorithm they will finally use in the adopted product.

I think they have settled in on a variation of the Lucent PAC algorithm but I'm not sure.  MPEG was dismissed a long time ago, as far as I know.

Ibiquity has really worked long and hard to get an analog signal and a digital signal to all fit in the NRSC RF Mask.  It's going to be interesting to see how well this works with all the variables possible in the AM band, especially as it relates to interference.

If you have a stake in AM radio this is very worthwhile information.

Best, Phil

This does not put AM audio quality on an equal footing with FM. Not by a long shot. In hybrid mode (both digital and analog signals being transmitted), the bit rate is very limited: 36kbps max. For any data the broadcaster wants to send (for displays or whatever) over the minimum 40 bits-per-frame (400bps) is taken right out of that bandwidth. No mp3 coding here; this needs the big guns, which means specialized low-bit-rate coding of the type used in satellite radio.

FM IBOC (in hybrid mode) has 96kbps available for its digital audio. That's 32kbps MORE than satellite radio uses per program.

On AM, the digital stream is sent as amplitude and phase components outside the audio spectrum. Most AM transmitters are capable of this, since it is the same technique used for AM stereo. Same thing on FM, essentially. FM is trickier because traditional FM transmitters are incapable of rendering a controlled amplitude component in the RF. This necessitates either a new transmitter that operates in Class A, or an adjunct transmitter that is combined with the analog transmitter.

In any event, even in the IBOC world, FM will still hold considerable quality advantages over AM.

It's my understanding that this signal is sent on a subcarrier of either an AM or FM station.  I have been told that the AM quality is good and static free, but is very hard to recieve at night if there is much skywave interference. I've also read that some people have noticed a slight hiss in the analog audio of FM stations that are running tests of the Ibiquity digital radio system.

I fear we're going to see another standoff between stations and radio manufacturers over who should adopt the system first.  If the radios aren't on the market, there's little incentive to start transmitting a digital program. If there are few stations broadcasting in digital, there's little incentive to sell the radios.

It is a proprietary coding for which the radio station will have to pay
licensing fees based on its revenue.

Actually, most modern transmitters are capable. Any transmitter with
sufficiently high bandwidth and low IQM to do stereo can do IBOC.

The FM mask will have to be changed to make IBOC stations compliant with
occupied bandwidth. This is part of what the FCC is considering at this
moment.

> As the FCC said, "a win, win situation" [my comment - same content, more
> interference, higher cost, revert to analog when the going gets rough].

The "revert to analog" feature will no longer work once we move beyond
hybrid operation and go "full digital".

> Certainly not, if audio fidelity is the issue.  The AM IBOC demo I heard at last year's NAB was unbelievably awful.  Sounded little better than RealAudio on a 28.8 modem.  I would rate it as unlistenable.

Well, considering that the rate available on hybrid AM IBOC isn't much better than what a dialup modem can deliver (actually it is much worse if you compare it to a 56K dialup), it isn't surprising that artifacts abound. I heard the demo at the Harris/iBiquity forum recently, and frankly, I prefer a well-engineered AM analog signal.

I look at these low-bit-rate codecs as fascinating curiosities, but for real, extended listening, what they produce is like fingernails on a chalkboard. Maybe the public in general won't see (hear) it that way, but I doubt it.

One other problem: AMs these days are shoestring operations. Only the corporate-owned, major market stations will be able to afford the equipment and licensing necessary for IBOC. This looks like more of a loser than AM stereo, IMHO.

The biggest sticking point right now is nighttime operation. There have
been no real nighttime tests and you can bet that extensive testing will
be required to determine all of the possible effects skywave propagation
will introduce.

Also, I believe that neither hybrid nor full digital operation will fit
into the current NRSC mask and ultimately there will need to be a change
in the rules, just like on FM.

Yes, sad to say.  I still haven't forgiven WHAS in Louisville for not only
dropping AM stereo (just before I bought a receiver), but *continuing to
promote it* on bumper stickers and vehicle signs for years afterward!

Partial ownership of fulltime 1 KW AM for sale. Small market in Idaho.

The "Radio Crazy" is back!

Joint venture. (You venture in, you go to the joint! Just teasing! HI!)

Active or inactive investors with at least $10,000 each are welcome. You must be US citizen with no felony convictions ro drug-based criminal convictions. (FCC policy).

All investors would be on the board with full voting rights if desired. No investor can own more than 49 percent and that rule applies to me!

Total consideration only $60,000. No real estate is included.

(478) 741-1710 in Macon, Georgia.

73,

Meyer Gottesman, W6GIV

In these economic times, stations are not inclined to tell a major local
advertiser that its considerable ad budget is not welcome business,
particularly when the basis is as flimsy as this.

Thank You! It's the same smoke and mirrors that cell phone companies used...If it's digital, it's gotta be good. Never mind that the audio actually sucks no matter how strong the signal is...It's digital. Total BS!

>From the demos I've heard, IBOC has the same, if not worse, "underwater" sound as RA does on a dial-up connection.

Plus, at least on AM, it makes the (already) limited analog audio even worse with a sharp 5khz cutoff and loss of CQUAM. I could be wrong, but isn't that roughly the response of the 'ol AT&T True Voice telephone lines?

Just my 2 cents.

Consider too, that this "demo" was a carefully controlled test. Now, the real world, throw in sloppy board operators/DJ's then add in heavy processing and program directors who want to "tweak" the sound. For the first time too, an AM signal will be subject to multipath, receivers will "blend" to an inferior analog signal. Now how does it sound?

This discussion over IBOC brings back memories of the debate over AM Stereo. It seems the only positive in the IBOC case is that we have one standard everyone is dealing with.

That said, what do you all think would have happened to AM radio if the FCC had set a stereo standard in the late 70's or very early 80's? (and stayed with it - unlike the revocation of the Magnavox standard)

My thinking is that AM radio would have stayed in the music business for a lot longer period of time than it did. I think AM stereo radios would have been common and popular and FM stations would have taken many more years to gain the dominant position they did.

An even better "what if" question: what if the FCC had allowed AT&T (I think it was AT&T) to go ahead with their AM stereo system in the early 60's? At the time, the FCC banned AM stations from broadcasting in stereo due to their dominant position over FM.

Oh yeah, a final question, whatever happened to Leonard Kahn?

Arnold Evans

No offense, but as the owner of a couple of stations during my lifetime,
I think I would rather, at this point, set fire to dollar bills in the
street. Probably get more bang for my buck, as it were.

Interesting story today about the risk of birds running into transmitter towers, both commercial broadcasters and things like cell towers. Article expresses concern over the growing number of the towers and what it might mean for bird populations, especially migratory ones.

excerpt:
Though conservationists identified the problem some 50 years ago, it has been only spottily documented around the nation, including in Eau Clare, Wis.

A 1,000-foot TV tower there set the national record for the most birds killed on any one night.

Stopping by the tower early one morning after a foggy fall night in 1957, Charles Kemper found 12,000 dead birds.

"In one night," said Kemper, now 82. "We actually picked up and counted them by hand.'' There were sparrows and red-eyed vireo, ovenbirds and Tennessee warblers, among dozens of other species.

For about 50 years, Kemper has documented the finding of dead birds, including 4,600 on a fall morning in 1964. All told, this now retired physician from Chippewa Falls has tallied more than 120,000 dead birds near the tower. Broken, bloody carcasses were found in grass, on rooftops and on the streets within a one-block radius.

There have been shocking numbers of dead birds at other sites around the nation as well. As many as 10,000 Lapland longspurs were found dead one snowy night in Kansas in 1998, after they hit a 410-foot TV tower.

Rest of the story:
http://www.twincities.com/mld/twincities/news/local/4265712.htm

My question: if birds are clumsy enough to whack into a tower, is it not also likely they regularly bonk their tiny brains out on tree branches, cliffs, rock formations and other obstacles occuring in nature? Given the size of the sky compared to the amount of space occupied by a metal tower and guy wires, it seems the birds still have the advantage, despite having...well, birdbrains.

Caveat: Orchard is owned by sears, and no one is going to purposely piss off
one of the bigger radio advertisers.

Also, they probably have a couple of good attorneys.

Hey Manu...

My advice would be to pick up a phonebook, look up "Radio", dial the numbers
and when someone answers, read your post to them.

Sorry, it's in sunny Bakersfield, California.  One thing that hasn't
changed about this business is that you have to be willing to
relocate.

Walt had already moved to Las Vegas by the time I got the central Iowa in the 70s, but I did get a chance to hear him a couple of years ago... he was hosting a golf talk show on KLAV-1230 in Las Vegas.  Even though I don't care about golf, Walt made the program interesting.

And there's a great excerpt from Walt's days at Top 40 KSO Des Moines on Ray's website: www.desmoinesbroadcasting.com

I suspect you won't be able to be in Kansas, anymore, Toto. You're
going to have to broaden your scope beyond a two state radius.

I ask because I am currently doing my senior project, which is a case study on the controversy of Clear Channel sending out a list of offensive/inappropriate songs to their radio stations in the aftermath of 9/11 and so I wanted to get some Clear Channel employees views/takes on it. Please email me privately led24@drexel.edu if you can help. Thanks!

I can see the WHIO tower from my window, it is still standing, Their signal Varies at times even at close range but I would say it is probably just ground wave conditions, heck, 610 in columbus comes in fine most of the time here, but there are those days I can't hear it at all.

What I don't get is press sources repeatedly mentioning this, yet I recall
Clear Channel issuing a statement that they did no such thing and left
discretion up to individual Program Directors.  If this is true, why
doesn't CC obstruct the opposite from being reported?

Other than some in-company joke lists, there was no such list circulated
from corporate. What got me was that no one seemed to notice that CC
stations in the area were, during the time of the flap, playing many of
the songs on the alleged list.

People believe what they want to believe. Facts are irrelevant.

The only semblance of real journalism on radio in the U.S. is the Pacifica

network and maybe National Public Radio.  Otherwise, journalism on radio is
dead now, and will stay dead in the future.  Commercial stations just do not
see it as a money maker.

According to http://www.snopes.com/rumors/radio.htm, this was never an
*official list* handed
down on high from Clear Channel headquarters. It was more or less, a few
program directors
asking about certain songs, and the list snowballed....

How could CC or any other company obstruct ANYTHING from being reported on outlets other than those it owns?

Last time I checked, we still have a free enterprise system and freedom of the press.  People can report whatever they want, without prior restraint, under the U.S. Constitution, although that freedom has been compromised by the Digital Millenium Copyright Act as regards certain software issues.  But in the case of false news stories, remedies for libel or slander come after publication, not before.  And even then, there must be some showing that harm was done.

Hi--

I'm an avid AM DX-ER from the 60s & 70s, the days when you could hear coast
to coast AM DX in the US.
Now that the AM band has been totally filled up by corporate radio, those
days are gone.
I am wondering, can Europeans or Pan-pacific DX-ers still receive any USA-AM
DX?

In the 60s, I was able to receive east coast & west coast USA-AM DX in the
Chicago (mid-USA) area.
In 1977 when I travelled to the UK, I was able to DX, WCBS-AM, NYC, &
WLS-AM, Chicago in London.
Is this still possible? Can any of you European DXers & Pacific DXers still
receive any US-AM DX?

I've worked for them for several years. Never heard of that.

This never was Clear Channel policy. One PD circulated a list of songs that individual stations might want to be careful of, particularly insofar as DJ comments were concerned. But that was just a "what if?" list exchanged among programmers. It was not an order. Ever.

Why do people still think there are alligators in the sewers of NY, or that Proctor and Gamble is a satanist company?

Some people think what they want to believe, unobstructed by truth. The "Oh, the horrible short playlist of homogenized songs" people would not let this subject die. Clear Channel makes not national music decisions at all.

Hardly.
Almost all channels are blocked by high power stations.
On almost any channel you find a 300 or more kW station.

The most remote station on AM I have heard in Holland Europe is Saoudi
Arabia on 1521 with 2 MW!!.

Ruud

The New York Times reports [1]  that:

"Here in Lake Charles, American Family Radio has silenced what its boss detests... It knocked two NPR affiliate stations off the local airwaves last year, transforming this... community of 95,000 people into the most populous place in the country where "All Things Considered" cannot be heard.

"In place of that program and "Morning Edition," [and] "Car Talk", listeners now find "Home School Heartbeat," "The Phyllis Schlafly Report" and the conservative evangelical musings of Mr. Wildmon, whose network broadcasts from Tupelo, Miss....

"The Christian stations routed NPR.... under a federal law that allows noncommercial broadcasters with licenses for full-power stations to push out those with weaker signals...

"This is happening all over the country. The losers are so-called translator stations, low-budget operations that retransmit the signals of bigger, distant stations. The Federal Communications Commission considers them squatters on the far left side of the FM dial, and anyone who is granted a full-power license can legally run them out of town.

"Religious broadcasters have done this to public radio stations in Oregon and Indiana, too, and many large-market public radio stations, like WBEZ in Chicago, complain that new noncommercial stations, most of them religious, are stepping on the signal at the edge of their transmission areas....

"Stations are scrambling for these frequencies at a time of rapid growth in the national NPR audience and even faster growth in religious networks like American Family Radio. It owns 194 stations, has 18 affiliates and has applications for hundreds more pending with the F.C.C.

"Public radio is belatedly fighting back. Last year, a national nonprofit organization was set up... Called Public Radio Capital, it raises money through tax-exempt bonds to help local public stations... buy full-power stations... helped public radio stations in Chicago, Denver, Nashville and Tacoma, Wash., to outbid their competition...

"In Tacoma, the organization bought a noncommercial FM station from a local technical college for $5 million.... Money to operate the station will come from major public stations in the area. "Until recently, public radio had been completely dependent on local initiative to protect its signal and acquire new stations," said Marc Hand... managing director of Public Radio Capital... based in Denver.

"For many of NPR's 273 member organizations, the legal and administrative costs of competing against religious broadcasters are sponging up millions of dollars that they might otherwise spend on news and other local programming.

"It is... nuts," said Torey Malatia, general manager of WBEZ, which has the country's third-largest public-radio audience. "Starting about four years ago we realized that if we didn't learn how to fight back, our coverage area would effectively shrink by a million people."

"As NPR itself acknowledges, religious broadcasters... "have employed a long-term strategy, where we have failed to do that"...

"The two public radio stations heard in Lake Charles... were caught napping as American Family Radio maneuvered over several years to bump them off the air...

"Translator-based stations have given American Family Radio the opening it needs to grab space on the noncommercial FM dial between 88.1 and 91.9 megahertz...

"As early as 1997, the network filed applications with the F.C.C.... to build two full-powered stations that would step on the two... public radio signals in Lake Charles...

"Religious broadcasters are snapping up most noncommercial stations when they come on the market. In the first two quarters of 2002, there were 14 sales of noncommercial stations. Of those, public radio groups bought only two...

"Here in Lake Charles, local rage at the loss of all access to NPR has fueled a yearlong effort to bring back public radio....

"What Wildmon has done to the public broadcasting band is try to eat it all," said Robert W. McGill, 74, an NPR devotee and a retired chemist. .. Wildmon, who became well known in the 1970's when he led national campaigns against sex and violence on television, declined to be interviewed...
.."Like many religious networks, American Family Radio has little local content; its stations rely

instead on satellite feeds from the home office in Tupelo. Radio industry analysts agree that public stations usually carry more local news and offer programs more closely tied to the communities they serve...

"More than a year after American Family Radio went on the air here, its two stations (one carries what it calls Christian contemporary programming, the other what it calls traditional gospel) have just one local employee.... Elizabeth Arrington, 21, the station manager, works in a remodeled house on the edge of town. Its broadcast studio is an empty room, although Mrs. Arrington said radio equipment would arrive soon.

"In all likelihood, before American Family Radio gets around to local broadcasts in Lake Charles, public radio will be back on the air here....

"A $309,000 antenna, nearing completion about 30 miles west of town, will let people here pick up KRVS, the NPR affiliate in Lafayette... "We lost access to a treasure that we all pay for with our tax dollars... We decided you don't have to like NPR in this town, but you are going to have to make room for it."

[1] "Religious and Public Stations Battle for Share of Radio Dial" by Blaine Harden, _New York Timnes_ online, 9-15-02, fulltext http://www.nytimes.com/2002/09/15/national/15RADI.html
--- end quotes ---

This doesn't just affect NPR. College radio stations will also be flooded out by more powerful religious signals. College radio listeners tend to be off-campus, either in oiutlying dorms or in nearby communities.

The problem can't be solved with just a "full-power license". The area covered is a strong function of both effective radiated power and antenna height. That may mean building a new transmitter facility at a more strategic ( and higher-rent ) location. "Effective" radiated power requires a sophisticated antenna system to focus the power at the horizon over the target area. These antennas are rather large for 3-meter wavelengths in the FM band.

Going headd to head with another station also means larger electric bills -- over $6,000 per yr. per 10kW added. All of this cost comes out of educational content, for stations barely able to subsist as it is.
The problem is not just that Congress 'stepped on' public radio by passing this new law. The FCC proposed that law to Congress, because of 'new thinking' at the FCC.

Until very recently, the FCC was supposed to MINIMIZE interference between stations, by not licensing the same frequency twice in the same geographical area.   Channel space has always been scarce, but the solution was to auction channel space --  or for potential station owners to buy each other out.

The only thing that's different today is the variety of content available to educational stations, versus the desire to hype religion from every tower --  even though the SAME religious messages are readily available on local cable, local commercial radio stations, and local commercial TV stations.  Many local broadcasters  have turned to religious audiences to replace listeners lost to cable.

The original FCC policy (of avoiding interference) was actually developed for AM radio, and for AM video signals.  When AM signals interfere, even weakly, the result is a piercing howl ( or in the case of TV, visible heterodyne  ).

Early FM signals were also vulnerable to interference.  Most receivers built since the 80's, however, lock on to the stronger FM signal and ignore the weaker one, using what are called phase-locked loops.  This same principle applies to narrow-band FM signals used by most police and fire depts. --  the stronger signal dominates completely . That's especially true in the UHF bands, since UHF follows line-of-sight, and doesn't cause problems over the horizon.

There are several reasons NOT to allow competing signals on the 'regular' FM band.   Unlike the UHF bands, FM signals travel over the horizon somewhat, and are more subject to atrmospheric reflection, causing problems farther away.   When stations compete, uneven coverage is exacerbated --  whether caused by uneven terrain or by intervening objects.   A listener may hear 'the wrong station' as planes fly over or as trucks pass by.

The FCC and Congress aren't worried about what that will do to lower-power NPR and college-radio stations --  the tacit assumption being that public radio will be forced off the air, and cease to be a political problem.   It's also a case of "wattage talks, content walks."

Until fairly recently, the FCC could also weigh "operation in the public interest", i.e. how much a proposed licensee ( or classs of licensee ) could contribute to the public good, through variety of educational content, or pursuant to informed democracy.  College stations, obviously, could contribute a great deal educationally.  Another rationale was also that academic speech couldn't be excluded from the dial merely to favor commercial-speech brokers able to bankroll a higher wattage.

The FCC has long sought a way to avoid value-judgments on whether diverse educational programming is 'valuable enough' for a protected place on the dial, compared to, say, a plethora of carbon-copy religious stations.

The FCC's role is fast-changing, because the real future is seen in new technologies. Cell phones for example 'channel hop' as needed. Packet-switched radio networks accomodate several users on the same frequency. Spread-spectrum devices of competing brands can all share the SAME bandwidth, spreading their individual signals across many channels. ( While traditional superheterodyne radios modulated a simple sine wave, this is not technically necessary. The carrier wave can be anything -- including a broad-band signal that sounds like faint noise without a matching demodulation. ) The FCC is now happily licensing spread-spectrum devices such as personal radios -- with the caveat that the user and manufacturer agree to "accept any interference" caused by other devices. If several people in the same building use spread-spectrum devices, the better devices are smart enough to route around each other's signal.

At first glance, spread-spectrum SEEMS like a magical eventual cure for crowded airwaves, but it's not.
Finite bandwidth is still finite. While some spread-spectrum LANs are blazingly fast for example, performance decays and range decreases as the bands become crowded, and the background noise increases, making it hard for such devices to receive each other accurately. T

The FCC has also been talking up "Internet appliance" -- including wireless 'radios' supporting delivery-on-demand of music, video, gamies and whatnot. These supposedly will replace both radios and PCs, and have the commercially desirable feature of taking control away from the user, and giving it to the vendor -- who can then control how often a song or game is played, bill in realtime etc.

There's just one problem, and that's lack of wireless bandwidth. The tacit assumption is that bandwidth-hungry "Internet appliances" will simply make content with a fiber-optic network, via matchbox-sized cell nodes as common as phone outlets in today's buildings. The only problem with that rosy future is that many cable companies lied like rugs about how soon they'd wire the country for 2-way digital cable, IF municipalities would only grant exclusive franchises, which they did. Customers ended up getting one-way "broadband" cable, with the assurance that the high prices they were paying would go to improve the network -- somewhere else where the franchise wars were hot.

So it seems that the FCC, and Congress, are throwing away the future of public radio, on the vision of new wireless technologies that are still vaporware. The message is in essence "We don't care what educational networks people have built -- we're forcing a new paradigm on everyone through the Miracle of Social Engineering", driven by the vast arrogance of Congress.

There's also been a political shift between Congress and the FCC. The power to protect public radio was also the power to protect public morals, and the power to require equal time for opposing political viewpoints. The Supreme Court has largely eliminated the FCC's powers of content control, while wired networks bypassed the FCC's power over the airwaves.

The result has been a push to use purely objective criteria in granting licenses. A maximally powerful station is thus "better" at serving a wider area, regardless of what it serves up.

There's also a growing belief among religious empire-builders that the public doesn't really NEED diverse educational offerings and liberal arts. In a post-9-11 world, the public need learn only to hate foreigners, be willing to kill foreigners, and to understand that a world war is necessary to defend Our Religion against the Great Satan The futility of World War III is irrelevant, because Jesus will come in the nick of time to exalt those with blood on their hands. If that's said often enough, on enough stations drowning out skeptical voices, people might even believe it.

Jim Kutz
( South Shore Skeptics )

"I know not with what weapons World War III will be fought, but World War IV will be fought with sticks and stones." -- Einstein.

The radio crazy is back!

I am now seeking investors (joint venture) to help me acquire a fulltime 1 KW in a small Idaho town not too far from the famous Jackson Hole, WY ski resort.

Total price for station is $85,000 with $25,000 down. It is the only station in the town. On the air over 30 years.

Active or inactive investors with at least $5,000 each are welcome. No investor (including me) can hold over 49 percent of the stock. We don't welcome "bullies"!

There is NO real estate included.

Negative nabobs and "AM bashers" are clearly not welcome to reply!

I am a semi-retired broadcast engineer and a ham since 1950. Last job in radio was CE for a fulltime 5KW directional AM in New York City. So I know what I am doing.

73,

Meyer Gottesman, W6GIV
Macon, GA

Tel: (478) 741-1710.

I say give them both licenses for the same frequency and no power limits at all.

The low quality of both NPR, which is long-standing, and the recent
decline in religious programming, leaves me not caring who wins.

Bring back Brother Binardi (``an 80 year old pharmacist who is in perfect
health'') and the fellow whose every sermon involved somebody who had not
repented being wiped out in an absolutely novel way, always a sad moment.

The present religious programming is no better than Rush when he loses his
sense of humor, which is to say his self-deprecation, and starts moralizing.

Wow! I hadn't realized that! The issue is whether or not the punishment for whatever either one was doing fits the "crime."

I can't see the justification for punishing Infinity to the tune of $200+ million for something the copulators will be able to pay out of their next paychecks.

If the "contest" was rigged, the usual fine is about $7000. Maybe since nudity was involved (Americans don't like nudity, let alone sex) the fine should be doubled. We certainly don't want to face sex, let alone naked sex. If I had been listening to the broadcast commentary the nude "pictures" would be in my head, since radio is an aural (maybe oral in this case). Each listener should be fined for listening and allowing theatre of the mind to generate feelthy peectures.

The firing of virtually everyone involved will go a long way in satisfying the FCC that the station acted responsibly in handling the situation. The bluenoses will have their investigation and the station will probably be fined. Politicians will make hay while the sun shines (not very long) and the issue will go away.

The "talent" will probably be running yogurt stands in Akron, though there's a rumor a Boston station wants them. Stay tuned.

Rich

Uh, I think greed requires more money than the contest was awarding. Greed is Enron, Worldcom, Tyco and all the companies that have, suddenly, found "errors" in their accounting. Particularly greed that harms others.

I'm sure all the investors in our 21st century corporate ethics would much rather have had their CEO's copulating in their offices rather than cooking the books. "It's a bad thing" (sorry Martha). At least they wouldn't have lost their life savings. THAT's selfish.

I say, bring back the all-time, greatest televangelist in the history of broadcasting: Rev. Roosevelt Franklin, and the "Echoes of Prophecy".
When I started in this business in September 1973, my first job was to run the board for Sunday morning public-affairs programming, including Echoes of Prophecy. He never preached a word of gospel. He spent 30 minutes asking you "write me a letter" and "don't forget to include a sizable check" and "I'll send you the latest Prosperity Package", which guaranteed riches beyond belief. Half of the program was "Testimonial Time", at which time people called or wrote in to say that within days of sending the Rev. Franklin a check, they got a new car or came into riches.
It was totally hilarious.
Today I am an Evangelical Christian, so don't count me as a Christian-basher, but I agree with earlier comments that there is a special place in hell for people who use religion for personal gain or to take sexual or financial advantage of people.

The original query was about the future of journalism on radio.  Regardless of what the political slant of the sources, there is real journalism there at Pacifica.  That is, you get investigative reporting, on the spot reporting from unlikely places as Zimbabwe,  Afghanistan, Guatemala etc., in depth stories, documentaries, commentaries.  You just don't have that on the so-called all news/all talk stations.  You don't get that on the 3 1/2 minute newtwork news blurbs at the top of the hour either.\

You keep asking what laws were violated. You keep saying no laws were violated.

I told you what infractions occurred - they were sufficient enough for the New York Police Department to arrest three people, the two trying to win the brewery prize and the 'talent' (ugghhhh) accompanying them and participating in the event.

I answered your questions about what laws were broken..

The FCC will answer the others, to see if the alleged offenses warrant revocation of the license. The license may have monetary value, but to retain it, you must not use it irresponsibly.

We shall see.

Amateur Radio Newsline™ Report 1309 – September 13th, 2002

Amateur Radio Newsline report number 1309 with a release date of Friday, September 13th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A world ham radio license inches closer while the N-T-I-A says no to 5 MHz for U-S hams. These stories are first on Amateur Radio Newsline report number 1309 coming your way right now.

(Billboard Cart Here)

**

## RADIO REGULATIONS: WORLD HAM LICENSE A BIT CLOSER

A world wide universal ham radio license is a bit closer. Q-News Graham Kemp, VK4BB, reports on a meeting that has opened yet another door:

--
AUDIO REPORT ONLY:  NO TEXT AVAILABLE.  Audio is at http://www.arnewsline.org
--

It had been hoped that a world license would have been in place by the turn of last century two years ago.  Now pundits are suggesting the end of 2009 or maybe 2010.  (Q-News)

**

AMERICA AT WAR:  HAM RADIO COMMEMORATES 911

Amateur radio was at ground zero in New York, Washington and Pennsylvania a year ago.  And on the first anniversary of the terror attack that felled the World Trade Center, hams were there once again as the nation paused to reflect. The day before the 911 commemorative ceremonies were held the United States was put on a heightened state of alert for terrorist activity.  Color orange the government calls it.  And since 911 the words to live by all around the world have been – be vigilant.

Ed Note:  From the President of the ARRL addressing the hams of the world on an Internet link-up, to hams in Florida operating air-mobile carrying American Flags to hams in NYC assisting at ceremonies, the Amateur Radio community involved itself in 9-11-2002.  Much of it appeared to be planned at the last minute and only now are reports coming into our newsroom.  Rather than rush together a report that would not do justice to all that was done, we plan to do in-depth coverage in next weeks newscast.  (ARNewsline™ from listener reports)

**

THE CHALLANGE TO OUR BANDS:  ARRL EXPECTED TO FILE ON THE 222 MHZ ISSUE

The American Radio Relay League is expected to file reply comments in opposition to the initial comments of Data Commlink Incorporated.  This, in FCC W T Docket 02-224.

As reported last week, W T Docket 02-224 merely sought to gather comments on requests for waivers on spectrum management services in the 220 to 222 MHz band.  But Data Commlink decided to use it as an opportunity to strongly suggest that the FCC remove 222 to 225 MHz from use by radio amateurs and transfer it over to commercial service.  Primarily for use by the electric power cooperatives that it represents.

Word is that the League will vigorously defend the 222 to 225 MHz spectrum. Keep an eye on the ARRL website news pages at www.arrl.org for the latest. (ARNewsline™)

**

THE SPECTRUM FIGHT:  NTIA HEAVES POTENTIAL MONKEY WRENCH INTO 5-MHZ BAND PROPOSAL

The National Telecommunications and Information Administration -- the N-T-I-A -- has recommended that the FCC not grant an ARRL petition for a domestic-only secondary Amateur Radio allocation at 5 MHz.  Amateur Radio Newsline’s David Black, KB4KCH, has the details:

--

The N-T-I-A regulates radio spectrum allocated to the federal government. According to the ARRL Letter, the last-minute negative recommendation from that agency followed hundreds of largely favorable comments and reply comments from all sorts of organizations and from many individuals.

But in an August 21st letter, the N-T-I-A's Fredrick R. Wentland wrote that federal agencies are making extensive use of High Frequencies  for emergency services.  This, Wentland says, includes communications support for the Department of Defense, the Coast Guard and Department of Justice.

Wentland, , who is the agency’s Acting Associate Administrator for Spectrum Management went on to say that the N-T-I-A believes the Commission's current proposal does not adequately provide for protection from harmful interference to these critical government operations primary in the band.  He says that without a more complete understanding of the interference potential to federal operations, the N-T-I-A believes the secondary amateur allocation would be "premature.”

But Wentland did offer up a carrot so as to speak.  He said that N-T-I-A was willing to work with federal agencies, the FCC and the amateur community to determine whether some future accommodation for amateurs at 5 MHz would be possible.  However that could include limitations on power or emission types, a reduction in the size of the proposed band, the use of discrete frequencies or geographical restrictions.

>From the South-East Bureau, I’m David Black, KB4KCH, reporting for the Amateur Radio Newsline.

--

Wentland's letter arrived at the FCC beyond the cut-off date for reply comments for ET Docket 02-98.  None-the-less, the N-T-I-A is a powerful agency and when it speaks, all other agencies tend to listen and to obey.  (ARRL)

RADIOSPORTS: US TEAM RETURNS FROM ARDF CHAMPIONSHIPS

This year's team of eleven American on-foot foxhunting enthusiasts were up against more than 300 competitors from 28 other nations, and they came within two minutes of bringing home our first medal.  Nadia Mayeva from Mooresville, North Carolina took fourth place in her age category by finding all her required transmitters in 109:02.  She was edged out by a YL from China, who won the category bronze medal in 107:20.

Gyuri Nagi KF6YKN of Maspeth, New York placed fifth out of 50 in the hotly-contested M40 category.  Tthat's males ages 40 through 49.  He and his family put on a one-week training camp for members of Team USA near his native hometown in Hungary during the week before the championships.

This was USA's third trip to the World Championships, which are held in even-numbered years at locations chosen by the International Amateur Radio Union.  Team members ranged in age from 33 to 60.  Co-captains were Dick Arnett WB4SUV of Erlanger, Kentucky and Bob Frey WA6EZV of Cincinnati, Ohio.  Karla Leach KC7BLA of Bozeman, Montana represented USA and IARU Region 2 on the International Jury overseeing the competitions.  Her assignment was Course Marshal at one of the foxes.

Complete results for all ARDF Team USA members plus lots more information about the sport are now at Team USA's official Web site:  www.homingin.com  That's homingin -- one word -- homingin.com

>From sunny southern California, this is Joe Moell K-zero-Oscar-Victor, for Amateur Radio Newsline.  (K0OV, ARNewsline™)

HAM RADIO IN SPACE:  BASS OFFICIALLY OFF OCTOBER ISS FLIGHT

It’s now official.  The Russian Space Agency has notified NASA that  'N Sync singer Lance Bass, KG4UYY, won't fly to the international space station next month because his backers were unable to raise the $20 million fare.

With backing from corporate sponsors that included Radio Shack and MTV, Bass had hoped to blast off from the Bikenour Cosmodrome in Kazakhstan on October 28th.  But the producer of a seven part documentary on Bass experience in space failed to raise the full amount of money needed.  The result is that the pop star was grounded by the Russians and a cargo container substituted on the flight in his place.

Had he flown Bass who is age 23 would have been the youngest person and youngest ham radio operator ever in space.  He also would have been the third paying space tourist to visit the I-S-S.  We’ll have more ham radio space related news later in this weeks newscast.  (ARNewsline™ from published reports)

**

ENFORCEMENT:  DONT TAKE 10 ON THE ROAD AGAIN

The FCC has told Cheetah Transportation Company to keep its trucking operation off of the 10 meter Amateur band. In a letter to the Monroesville North Carolina company the FCC says a driver for a vehicle licensed to Cheetah was operating unlicensed radio transmitting equipment on 28.085 MHz. This, while driving on Interstate 77 in South Carolina last June 5th.

In its letter to the company the FCC tells Cheetah Transportation that this operation will subject the person operating the radio to fine or imprisonment if the violation continues. Fines normally range from $7500 to $10,000. (FCC)

**

ENFORCEMENT: FCC SAYS NYC REPEATER PROBLEM IS SOLVED

The FCC says that a repeater problem in the New York City area has been put to rest. This as the agency places primary responsibility for solving interference on the shoulders of the operator of an uncoordinated repeater. The agency’s Daryl Duckwoth, NNZ0W, explains:

--
Duckworth: “We closed the case involving a repeater operated by Ramon Floriman, KB2PRV, of Elmhurst New York. Florimam was unable to show coordination and the Enforcement Bureau pointed out that he would be primerilly responsible for resolving any interfertence to a coordinated repeater; that a Control Operator must be present during the operation of the station and that the repeater is to be used only by licensed operators.”
--

The FCC hopes that closes the book on this one. (RAIN, FCC)

**

HAM RADIO EDUCATION: THE BIG PROJECT WORKS

The ARRL Education and Technology Initiative, better known as "The Big Project," has been getting big donations. More important, its getting big results.

The Big Project was created by ARRL President Jim Haynie, W5JBP. League Vice President Kay Cragie, WT3P, made it all work. Its primary objective is the spreading of Amateur Radio into the nation's schools.

The Big Project support fund has already received $198,000 in donations from approximately 3,400 individual ARRL members. The average donation has been about $50. (ARRL Great Lakes Div. Release)

HAM RADIO TRAINING: HAMTESTONLINE.COM

J. Cunningham and Associates has launched a new subscription website for aspiring radio amateurs and those wanting to upgrade. Called www.hamtestonline.com, the company says that the site is designed to help both new and experienced ham radio enthusiasts prepare for U.S. amateur radio

written exams.
According to a press release, HamTestOnline operates entirely online. There is no software to download or install. One click records your answer, provides feedback, and presents the next question. The Website includes all questions from the latest Technician, General, and Amateur Extra question pools.
J. Cunningham & Assoc. is a small software development and consulting firm located on the outskirts of Boston, Massachusetts. They can be contacted by e-mail to webmaster @hamtestonline.com. (Hamtestonline)

**

BROADCAST COMMUNICATIONS TRAINING: SBE OFFERS CERTIFICATION

The Society of Broadcast Engineers - the SBE - is offering a program of certification for broadcast engineers. Certificates range from the entry-level Broadcast Technologist to the 20-plus-years-of-experience-needed Professional Broadcast Engineer. The program includes certification for Audio and Video Engineers. There is also a Broadcast Network Technologist which does not include any RF related questions. For more information about SBE Certification contact the SBE chapter nearest to you. (SBE PDX)

**

CELEBRATIONS: SCADS AT YEAR 29

The 29th Birthday Meeting of the Southern California Area D-X'ers is slated for September 21st at 12 noon. The venue is the Community Room of the F&M Bank in suburban city of Seal Beach. The meeting is open to the general public. Contact Bill Fisher by e-mail to billfishernow@netzero.net for more information on this special gathering. (SCADS)

**

SPECIAL EVENT STATIONS: GB2RAF ON THE AIR

And the permanent special event station GB2RAF located at the UK Royal Air Force Air Defense Radar Museum was to be operational on Saturday the 14th of September between 09:00 and 14:00 UTC in the 80 or 40 meter bands. QSL will be sent to all amateurs who make contact and request one. (GB2RS)

BREAK 2

This is ham radio news for today's radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

EDUCATION: HOME SCHOOLING HAD HAM RADIO

In California where Amateur Radio Newsline is located, some 150,000 youngsters each year are getting their primary education at home. They are home schoolers. Their teachers are primarily their parents and similar percentages hold for most other states. And there’s a growing question: Has ham radio become a part of the home schooling movement? Bill Pasternak, WA6ITF, has more:

--

Rumors abound that ham radio has become an important addition to the nations home schooling movement but only those involved in home schooling can really tell us -- and you -- what’s happening. To try to find out, Amateur Radio Newsline is going to run one of our “mini surveys.”

To take part is simple. First you need to be a ham radio operator who is home schooling his or her children or a ham radio kid who is being home schooled. If you fit either category, take a moment to send us a note explaining how you are using ham radio in your home schooling curriculum and why you chose it.

Please send your electronic response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We will collect the data for the next three weeks and then post some of it to our website. If we get enough input we may even try to write an article on ham radio and home schooling for one of the mainline Amateur Radio magazines -- if they are interested. Lets face it: This could make for a rather interesting project.

For the Amateur Radio Newsline, I’m Bill Pasternak, WA6ITF

--

Again, if you are a home schooler who uses ham radio in the teaching process please send your e-mail response to newsline@arnewsline.org and be sure to put the words home schooling in the subject line. We thank you for taking part in this survey.

**

## HAM RADIO IN SPACE: U-O-SAT 11 HEARD AGAIN

In the world of ham radio in space, word that U-O-SAT 11's V-H-F beacon has been heard once again. Paul Roeder, KK5ET in Houston reports via the AMSAT News Service that he copied the 2 Meter downlink on 145.826 MHz FM. This is a 1200-baud A-F-S-K signal and he heard it between 21:25 and 21:38 UTC pass on September 4th. Paul says that the signal was a strong S 3 to S 5. (ANS)

**

## HAM RADIO IN SPACE: JAPAN TO DEVELOP SPACE SHUTTLE

Japan's space agency says that it plans to test an unmanned landing and take-off system next month. That nations National Space Development Agency, or NASDA, that it hopes will one day be used in a reusable shuttle or other spacecraft.

The five-part tests are to begin next month on Christmas Island in the Micronesian archipelago of Kiribati. They will be followed by a second set of tests sometime next year. (K6DUE, NASDA)

**

ON THE AIR: THE VHF/UHF FALL SPRINTS

The 2002 Fall Sprints, sponsored by the Southeastern VHF Society, are about to start up. According to Greg Robinson, KB4NVD , the Sprints are a fast paced block of time where all the contest activity is compressed into a short period. That says Robinson makes them a great chance to get on and work lots of stations on your favorite VHF and higher bands.

Robinson says that the bottom four bands all have their own separate evenings for the contest. The microwave bands from 902 MHz and up are grouped together on a weekend morning.

More information about the days of the Sprints , the rules and a list of who is handling the logs for each band will be found on the SVHFS webpage. Its in cyberspace at www.svhfs.org. (VHF Reflector)

**

DX

In D-X, word that G3PYB, G8ACE and G8BKE believe they have re-claimed the United Kingdom distance record for 76 gigahertz. Yes that’s 76 gigahertz -- as in way up there in frequency.

On Sunday September 1st, the trio made contact on 75,976.2MHz over a distance of 79.6 kilometres between Ventnor on the Isle of Wight and Highclere, near Newbury in Berkshire England. Further details are on the world wide web and there's a link from the RSGB site at www.rsgb.org. (RSGB)

And nearly at the other end of the spectrum, on August 30th at 05:50 UTC stations G3MLO, and MW0AQD, were in QSO and taking part in the British 'Fivemegs Experiment' on 5398.5kHz at 05:50 UTC. Afterwards, G3MLO received a reception report from ZL2JR, saying that their signals had been copied in New Zealand. MW0AQD was received at '4 and 4' while G3MLO was copied at '5 and 4'.

While the 'Fivemegs Experiment' is intended to investigate propagation within the U-K, the contact was made shortly after sunrise in Britain and around sunset in New Zealand. This is the time that long-distance 'greyline' propagation can be expected to occur (RSGB)

**

THAT FINAL ITEM: A NEW KIND OF BATTERY

And finally this week, a new battery about to be marketed for home video enthusiasts holds a promise in expanding ham radio emergency communications. It is called Instant Power and Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has more in our technology report:

--

One of the most frustrating experiences for a photographer or a ham radio operator is to be in an acute situation that requires equipment work properly and have the batteries powering the equipment go flat.  For the photographer it usually means a lost photo opportunity.  To the ham radio operator assigned to provide communications during an emergency it could be a life and death situation.

But power reliability could soon increase dramatically.  Steve Crow, K4CPX, passes along word that the nations largest photographic retailer, Ritz Camera has announced plans to begin selling a new battery that can keep a camcorder or digital camera shooting away for half a day.

The new source of portable power is Electric Fuel Corp.'s Instant Power disposable batteries.  Based upon Electric Fuel's zinc-air technology platform, the Instant Power camcorder battery connects to the camcorder through its DC jack and offers the user up to 10-hours of running time.  Another model designed for digital still cameras offers upward of 12 hours of continuous operation time. As with the camcorder battery, the digital camera battery pack comes with a built-in belt clip and 3-foot cord.  Both batteries have a five year shelf life in the original sealed aluminum pouch and come complete with a 3-foot cord and an integral belt clip.

While not directly designed for ham radio needs and not a renewable source, the new battery could augment the needs of ham radio operators in emergency communications situations.  And here's where Amateur Radio ingenuity comes in.  If models are available that can directly or through some home built regulator adapter be made to power a 5 watt hand-held radio, an Amateur working an emergency situation would have hours of power wll beyond that of his radios normal battery.  And depending on how much he transmits, an Electric Fuel battery might run his H-T for several days before requiring replacement.  This also gives the possibility of extended operations for low power Field Day stations, QRP treks and similar one-time operations.  Best of all it is a date it, put it on the shelf and forget it power source, standing by for the next five years in case it is needed.

For the Amateur Radio Newsline, I'm Henry Feinberg, K2SSQ.

--

Electric Fuel also manufacturers a smaller version of this battery technology for cellular phones and P-D-A's.  You can find out more about this new power source and the technology behind it is on the web at www.electric-fuel.com. (K4CPX)

I don't know how to break this to you, but lists abound in radio, all the time. There are "emphasize" lists, "avoid" lists, lists for special programming, holiday lists, and lists of every description. Listeners don't program radio stations directly.

> must not use it irresponsibly.

What offenses did the station commit? How was the remedial action by Infinity inadequate or indicative of a lack of assumption of responsibility? What more could the station have done?

```

That has got to be the least thought out response I have read here ever.

Stations try to anticipate how their audience is going to react. An example
would be deciding when the first date folks may want Christmas music at the
start of that season. Research may be done, or it may not. In any case, the
objective is to find out when that music is appropriate.

It's about being appropriate. Jokes on the morning show about airplanes
falling apart in the air may be funny to some, but not in the aftermath of a
local airliner crash.

A-p-p-r-p-r-i-a-t-e.

After 9/11, many programmers thought some songs might be considered by most
to be in poor taste. I doubt many oldies stations wanted to program "Leaving
on a Jet Plane"  the next day.

The list circulated to help fellow programmers consider songs that they
might want to put on hold for a day or a week or whatever. There was no
dictate to do so, but good taste overcame at least one programmer and he put
some thought into not offending listeners and reacting to their
sensibilities.

I was listening to WDRC-FM Hartford on 9/12 and heard the Bee Gees' "New
York Mining Disaster 1941" start up ("In the event of something happening to
me..."). After that line, the song was quickly faded out and replaced by Sly
and the Family Stone's "Thank You (Fa Lettinme Be Mice Elf Agin)." No on-air

explanation was given, of course, but I'd imagine someone there thought a song about digging for survivors of a disaster was inappropriate at the time.

By the way...I can ALWAYS turn off the radio if I hear a certain song
I don't find apprOpriate in the aftermath of 9/11....right?

Lauren

I didn't say I wasn't willing to relocate. A two-state radius is pretty
broad (Utah to Illinois, South Dakota to Texas). California is just a little
farther that I would like to go considering how much I would probably be
making.

S.E.N.
Relocated three times already, anyway.

Explain, please. Radio stations are everywhere. Why do I *need* to broaden
my scope?

S.E.N.
I would also think any recent college grad would be interested in such an
explaination, too.

Your choice is understandable -- I'd be loath to leave California --
but you should understand and acknowledge to yourself that you have
made a conscious choice to limit your opportunities.

I went when and where I had to go to further my career. I have
relocated across country three times, (NY to CA, CA to OH, OH to CA)
and twice within California. FWIW I've been in my present job for
almost 15 years, so I'm not exactly a "floater."

Hello All,

I'd like your opinion on a broadcasting school.

What's the collective thought about the "Broadcast Training Network", at the URL http://www.learn-by-doing.com/index.htm ?

I've been interested in getting into radio for some time now, and would like to attend a school that will teach me all the various things about it.  This one interests me because they claim that they'll put me into a real working commercial station to get experience.  I like that idea.

Naturally, though, I'd like to hear any thoughts, opinions, experiences, about this school.  Their website is the usual marketing hype, so I'd like to hear any "real-world" type of information.

I'm most interested in this school's credibility.  Do they do what they say?  Has anyone taken any of their classes?  What have you heard about them, etc.

Thanks.  I appreciate any input.

Gordon P.

There are probably not enough stations in the immediate are you want to stay in to guarantee a job, or, particularly, one where you would learn something useful. Any communications or journalism program is barely adequate to start working in the real world. Pick a station where you will be with competent people you can learn from. Ratings are a good sign of a good station, if the station is in a rated market. If you are in the plains states, agribusiness awards and recognitions might indicate a good news station.

Even assuming htere were interesting opportunities in Kansas, how often do they have openings? The wider your geography, the better your chances. Also, getting out of the same old, same old will help you gain perspective. See the world, or at least something other than Kansas.

Most of us had to move from market to market when we started. My second station (actually, cluster) was 2500 miles from the first one, and the third was about that far from the second one. Etc.

A station receptionist in California likely makes significantly more
than a station engineer in South Dakota.

Three whole times? I can see why you would want to give it up.

Radio stations may be "everywhere", but radio stations that want or need to hire YOU and your particular talents and skills might not be located in your region. Radio journalism is "programming" and proper fit is essential...as opposed to things like sales, engineering, or management. Even the biggest names in radio and television have relocated more times than they would care to think about. When you reach the big time, you will be forced to relocate to a major market...if you want to get paid what you are worth.

> I would also think any recent college grad would be interested in such an
> explaination, too.

It depends upon which area of broadcasting he intends to pursue. In this area, the salespeople, managers, and engineers have all been around for decades. The on-air and support people are in and out of here like a bus depot.

As a famous newscaster would say, "And that's the way it is...".

It's been known for some time, as part of the "big move" that moves KCSX (97.3) from Moberly to Lee's Summit, that WIBW-FM in Topeka would have to move.  The Time for WIBW's move has come upon us.

The changeover officially occurs at 12:01am Wendsday, September 15.  WIBW-FM, Topeka, moves from 97.3 to 94.5.  They are promoting the "Top 30 of 97 Country." Listeners are encouraged to write down all the songs as part of a contest tommorow morning, where having the total list could pocket someone $945 during the 7:00 hour.  In addition, they may "flub up," affording someone $94.

One thing that is in the dark is what happenes to KJCK "Big Kat" 94.5 in Junction City. They are tennatively scheduled to move to 97.5, but as far as I know, they have not applied nor gotten a CP for the move, per search on the FCC website. KJCK is a little too far away to receive well regularly, although I could probably pick it up if I take my car to Topeka.

"Many people are going into the court room and coming out victorious."

And the same voice every week with a different "testimony."

>
> It was totally hilarious.

Probably the funniest thing ever on the radio. It was funnier than any parody could be. The loud organ music and the really bad editing made it even better.

I have one program on cassette someplace... I think that week the Rev. had the "True Blue" prosperity package.

>
> Today I am an Evangelical Christian, so don't count me as a Christian-basher, but I agree with earlier comments that there is a special place in hell for people who use religion for personal gain or to take sexual or financial advantage of people.

Amen.

That is what stations want to avoid in certain circumstances.

Again, stations try to program proactively. They try to do what is appropriate, what will get listeners to stay around,  not just slap anything on the air. There are too many alternatives in most markets to just run the risk.

I don't know.  I am not familiar with New York state law.  However, I do know
that if you are arrested,  you are usually charged with a crime.
Since the three that were arrested have not been able to claim 'false arrest',  I
assume that their arrests were valid.

What are the penalties?   Go to a New York lawyer,  pay him/her the fee,  they'll
tell you.   I don't know what they are.

To be determined by the FCC in the not too distant future.  I will keep an eye on www.fcc.gov.
I'm sure the trade journals will as well.    But I already said that.

> What more could the station have done?

Ah, a new question.

Probably not permit and encourage such a stunt in the first place?  (Duh....)

Perhaps you heard the original pirate broadcasts of the mid-1990's. Maybe you were there when TTN pulled the plug on a rebroadcast of the "Sloppy Sex Extravaganza" on PanGlobal Wireless.  Or maybe you don't know what on Earth I'm talking about.

Anyway, you'll get an experience unique to broadcast listening if you tune in to WBCQ  - The Planet on shortwave!  Premieres 27 September 2002.

Fridays: 2100 - 2130 UTC on 7.415 MHz

Saturdays at 1900 UTC on 17.495 MHz

Tune in to the music, commentary, bad Spanish and worse comedy!  Hey,
it's a half hour...what have you got to lose?

PanGlobal Wireless is not the pirate broadcast of days gone by; we've
simply stolen the name because we liked the show.  Honest.  Really.
Sh-h-h!  Don't tell Allan H. Weiner what we're up to!

This leaves you with Dallas, Houston, Chicago, St. Louis, Maybe Salt Lake City, and maybe Oklahoma City for a market that pays "decent" wages.  As others have mentioned, moving is a way of life in radio.  I moved from Ohio to Michigan to Ohio (2 stations) to Texas (4 stations in

2 cities) in a 12-year period.

When the last station, a TV station by the way, dropped news I elected to stay in the same town until my kids were out of High School. That meant a total 15-year commitment to Houston and I dropped out of radio/TV for a "real" job. Great stability for the family, but terrible on the career.

Now that my son's out of High School, I'd love to get back in but, like you, I need to stay within a reasonable distance. This is to appease my wife who does not want me to "take her away from her family again." That reasonable distance pretty much limits me to Texas, Oklahoma and Arkansas. It seems like a big area to cover but realistically it's a career killer because of severely limited options.

I'm in Canada, larger towns that pay well are really spread out up here.   I worked every major market from one end of the country to the other. (only skipped the East coast and Winnipeg)  Kids are the problem, "we want to stay here and graduate high school with our friends".  That statement is a killer on broadcasting careers. ;-))   You really do have to move, it isn't a bad thing, it  "widens you"  of course eating at McDonalds can do the same thing. -))  My wife is in the business, so that made for  a more "understanding" attitude.
Ray

> *You forgot the O.... is anyone here a Clear Channel employee.....seriously....

Why don't you call the programming staff at the nearest Clear Channel-owned radio station and ask them?  I'm sure you'll get much the same answer you've already gotten here.

I hope you're not going into this "senior project" with any preconceived notions about the matter.  From your comments, it would seem that you have already made up your mind and are willing to ignore any facts to the contrary.  If so, don't expect to be graded very highly on your project.

Unless, of course, your instructor is of like mind and has encouraged a particular conclusion, which wouldn't surprise me.

That is making an assumption contrary to available evidence. It doesn't matter how much a station does not permit something, people can and will do it anyway. That fact that that O&A were canned would indicate that they DID violate some prohibited behavior.

Much is made about how one cannot yell "fire" in a crowded theater. That is nonsense. Nothing whatsoever would stop you or me from standing up and yelling fire in any crowded theater on the planet tonight or any other time. There would be consequences, but nothing would prevent us from doing it.

Likewise, there is no way a station can prevent talent from doing almost any heinous thing on the air before the fact. All they can do is to clean up after. I would say that the station did exactly that.

*Well..I have been in touch with one employee...through email..thing
is I'd rather get in touch with email first and then phone...I
mean.fuck nevermind. Anyways....I thought I was already done with the
goddamn thing but my advisors want me to interview one more employee

or some shit...the employee I got into contact with was very helpful and in a way I do somewhat see them as guidelines....so....FUCK!!!!!!!!!!!!!!!!!!!!!!!!!! Sorry frustrated at this whole thing (Initially I wanted to analyze the songs on the list...basically get to which were offensive and what not but stupid advisor wanted me to go into the company and all)

Lauren

And wasn't that organ music on a three-minute loop, which meant it was
heard a jillion times on each show?  I remember hearing this on WLAC
in Nashville late on Sunday nights every so often--just didn't
remember the title or the rev's name (and the name to me is suspect,
considering that "Sesame Street" had a character named Roosevelt
Franklin).

Of course, some of the things that John R. and the Hossman used to
pitch on 'LAC were suspect in a secular way, too...

Rich Wood <richwood@nyc.rr.com> wrote:

"Wow! I hadn't realized that! The issue is whether or not the punishment for whatever either one was doing fits the "crime."

That's the whole point!  Infinity can't be punished for what those two people did in the church, only for what was put on the air -- and the punishment has to be determined on that basis alone.

Station management can and should pull the plug before the offense is committed.

It is not impossible.  Nor is it unprecedented.

They moved too. Turns out that they didn't need a CP to make the move,
since it did not involve a tx site or power change, just a change in frequency,
which was itself already authorized in the rulemaking that moved KJCK. A host
of other stations moved/are moving as well; KNCY Nebraska City from 94.7 to
103.1 is one.

yes, just like on 9/11 of this year, the first song I heard when I turned on the radio that morning was the Foo Fighters "Learn to Fly"...I normally love that song and would usually crack it, but it didn't feel right to me on the one year anniversary so I changed the station. No one had to tell me to do that...I am a big boy and can take care of myself. :)

If you had called a local ClearChannel station and spoken to an employee
there, you would also have some assurance that you were, indeed,
speaking to a ClearChannel employee.

What's new with my radio work? Go to: http://www.comedyorama.com to find it.

WILLOUGHBY GOES NATIONAL
I have just completed six new episodes of my surreal SCI-FI/comedy radio serial, "The Whithering of Willoughby and the Professor," which brings the series up to 18 half-hours. They will be available for stations to broadcast sometime next year. In addition, I have digitally remastering the first 12 episodes with new introductions and closings. The first six episodes will be made available to stations this Winter. In addition to co-writing the scripts with Robert J. Cirasa, I produce and direct the shows and I perform all the characters voices for the series.

WILLOUGHBY GOES LITERARY
Robert J. Cirasa and I have just written a short story featuring Willoughby and the Professor which appear in a new anthology book, entitled: It's That Time Again! The New Stories of Old Time Radio, scheduled to be published in mid-December 2002. The story is called "Willoughby Goes and Gets It." The concept for the story was to work within the more na�ve and wide-eyed science fiction style made popular in the 1950s while using original characters from our own current national public radio series, "The Whithering of Willoughby and the Professor." The result, we believe, is a both post-modern tribute and a story that holds up on its own merits.

### HALLOWEEN BROADCASTS

More than 30 radio stations have picked up my Halloween-themed shows for this October. The shows include a radio play called "Halloween Happening" and "We Take You Now to Grover's Mill" - my radio documentary of the making of the "War of the Worlds" broadcast, which features my interviews with John Houseman, Howard Koch, Arthur Anderson and townspeople of Grover's Mill who where alive at the time of the broadcast.

### HOLMES GETS GOOD REVIEW

My parody radio series, "The Misadventures of Sherlock Holmes," was given a positive review in the latest issue of Scarlet Street magazine. Read it at: http://www.comedyorama.com/soundforsale/graphics-sfs/scarlet-street-holmes-02.pdf.

### NATIONAL PUBLIC RADIO TO DO PROFILE

NPR's "All Things Considered" will be airing a 17 minute national feature story on me sometime before the end of the year. It will deal with my childhood, Willoughby and the Professor, voice acting and Daws Butler. More info. to come on this one. The piece may also be rebroadcast on NPR's "This American Life" next year.

Really! Who would be the monitor? Who would take reponsibility for
"false pulls"? And do you run the station on a fifteen second delay at
all times?

Please supply the details. I cannot even imagine how one could "pull the
plug" in advance.

news:<aklemv$n0j$1@xuxa.iecc.com>...
> Maybe your stereo speakers are out of phase?

Booming bass is not a sysmptom of speakers being out of phase.

In fact with a mono source signal, where the feed to both speakers is equal electrically, it's the equivalent of everything being mixed to the center of the stereo spectrum and we'd expect the bass to disappear.

Kevin Becka, the Home Rcording Editor at About.com wrote an excellent article about phase at:
http://homerecording.about.com/library/weekly/aa042997.htm

WCBN WILL DESTROY YOUR FEEBLE FORMA

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown. We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
_AND_
we celebrate 55 years of student broadcasting at UM

Station management, who is ultimately responsible for anything that goes out on the air as entertainment..

> Who would take reponisbility for
> "false pulls"?

Station management, who is ultimately responsible for anything that goes out on the air as entertainment.

> And do you run the station on a fifteen second delay at
> all times?
>

No - but if something is going in a direction which could expose the station to some liablilty or problem, station management CAN pull the plug. And they do.

For instance, if station personnel orchestrate a stunt, say, involving a couple having sex in a church and send a staff member to broadcast it on the air, they can pull the plug before it airs. Or pull the plug on such a contest. The "15 second delay" has nothing to do with it.

They would have to explain themselves to the audience that would be disappointed that the 'sex in a church' stunt didn't air. But I'm sure that WNEW(FM) management now, would have preferred that path -- to explain it to the audience who enjoys such pandering entertainment.

It's certainly better to say "sorry kiddies, we had to pull the plug because the stunt violated our station standards and may have gotten us into trouble with the FCC"  than to have to explain it to the FCC in their inquiries,  I would think.

> Please supply the details. I cannot even imagine how one could "pull the
> plug" in advance.

Just did.   While you cannot necessarily pull the plug on a talk show host saying "they could put s**t on a bun and I'd eat it" -- you certainly can kill a stunt of this nature.  They didn't plan it in 15 seconds . Please do not give them the intellectual credit for that.  So, if a contest about having sex in the most unusual place is in progress,  it can be stopped as it starts (or killed before it starts).

Yiddish-Israeli Radio Program a Hit with Listeners
By Jason Nielsen
The Jewish Advocate Staff
http://www.thejewishadvocate.com

Disc jockey Pnina Shamsi, host of the Sunday morning Yiddish-Israeli music program "Chagigah" on WERS (88.9 FM), connects with her 4,000 listeners through musical traditions and humor.

The music and show focuses on the hope inherent in Jewish culture and heritage. While seemingly disconsolate music styles, Yiddish and Israeli music connect a bridge between the past and present with the genre's humor. With music dating as far back as the early 1920s to more recent hits by Rami Kleinstein, the tracks conjure up strong feelings for Israel and the past.

"People call in with their stories not necessarily only connected to the music, but also cultural things," Shamsi said. "Through the expression of music, we can connect on two levels: music and culture. Yiddish music has a light-hearted humor that jokes around as well as some Israeli music. "

The 20-year-old Emerson College junior took on the show on the school-owned radio station as a way to continue her work within radio while still observing her religious beliefs. Shamsi was offered the DJ post for a Saturday children's program, "The Playground," but had to decline because she keeps Sabbath and does not work on Rosh Hashanah.

An audio and radio major with minors in psychology and writing, she said the music makes her feel as if she is in Israel. A first-generation American, her father was born in Iran and moved to Israel when he was 3 years old. Her mother, the daughter of Hungarian Holocaust survivors, came to the United States when she was 2.

The 18-year-old "Chagigah" program has developed a devoted following. Trying to make it a fun show, Shamsi tries to connect with her listeners as much as possible, and they are not afraid to give her a call with their bad jokes, funny stories and personal anecdotes. One Sunday morning, Shamsi recollected, she had a shoulder pain that flared up. Kvetching over the air, she asked her listeners for a remedy.

"Ten or 15 people called in with their remedies from heat packs, ice packs to massaging," she said. "The WERS engineer even called me up on the red, dusty phone that nobody touches and said he had the name of a really good acupuncturist."

The format of the 8-11 a.m. show starts with Yiddish and Klezmer, slowly wading through to Israeli folk songs and then Israeli rock. As the morning moves on, Shamsi gets into more loud music. Without focusing on one particular style of music, she does allow five-song sets to explore stylistic peculiarities of the different genres.

"While some people say I focus more on Sephardim stuff," Shamsi said, "I try to give people a wide range, so everyone is happy. If I have a song set of belly dancing, I will go with it for the whole set, break and then maybe go into some folk-guitar music."

Yiddish music and Klezmer, which are each experiencing recent revivals, emote strong personalities. While enjoying the "old sound," Shamsi explains that an integral part of the Klezmer music's personality is the clarinet. Even without understanding Yiddish and Hebrew (which Shamsi can partially understand), the DJ said the music transcends any language barrier. Some of her favorite groups include Mein Yiddishe Mame, the Klezmer Conservatory band and the New Orleans Klezmer All-Stars.

She contends the re-interest in the genre has to do with keeping a grasp on a culture slowly disappearing. "The people in our lives that spoke, sang Yiddish to us and played the songs are slowly going away," Shamsi said. "We miss something, so we are looking � we see that the people are dying, and unfortunately, the culture and language is going as well."

Israeli music played on the show focuses on enjoying life. She believes Israeli artists have an ability to make light of issues in spite of the problems confronting the country. Some popular Israeli artists presented on the show include Israeli classic rocker Eyal Golan, poppy Sarit Chadad and the institutional Rami Kleinstein.

When the Brookline resident started the show last summer, she included 15 minutes of news from Israel. As the conflict escalated, she discontinued the news report.

"It is hard to have a news segment and talk about 15 people that were killed and hop right into the music and forget about it," she said. "Every so often, I will pipe in if breaking news happens, but I think it is understood between my audience and myself that we just are there to have a good time."

The tensions of the Israeli-Palestinian conflict have not entirely missed the program. Shamsi said how people get "a little sensitive and call in" if Arabic lyrics mix with Hebrew music, which occurs in the music of Etti Lebi and the Spanish-Israeli artist Alabina. "I can see how they might get confused because it is an Israeli show, but I am not trying to promote intolerance," she said. "Music is music. Middle East is the Middle East. I think everyone is an Israeli, everyone is a Palestinian, and everyone is the same thing."

For sale:

Part ownership in class "C" (formerly class IV, aka graveyard, aka local, sillies!) in small Idaho town. Only station in community. Joint venture. Cheap! Active or inactive investors with at least $5,000 each are welcome. All investors would be on the board with full voting rights, if desired.

Total: $85,000 with $25,000 down. Seller financing. NO REAL ESTATE. You heard it first here, kiddies!

The "Radio Crazy" is back. I'm not THAT crazy! Last job (2001) was Chief Engineer for 5 KW fulltime AM in New York City. I think that is a mojor market! (Duh!)

Please contact via email or telephone. (478) 741-1710.
Macon, GA.

73,

Meyer Gottesman, W6GIV

"G.T. TYSON" <gtyson@nc.rr.com> wrote...
> Around 1976 a station here aired "Fantasy Park" a daylong pseudo-concert
> with every imaginable band that was popular at the time...  <snip>
>Anybody remember that one?
>     GTT

GT,

You'll probably want to check out the story and demo at:
http://www.reelradio.com/bw/

Beau Weaver, then of KNUS-FM Dallas, says it won Billboard's Syndicated Program of the Year Award in 1975.

In Boston, PD/PM driver Clark Schmid used Fantasy Park as the launch for 94.5 WCOZ-FM, the first serious FM competition to WBCN. After the special, Clark was the sole live program, but the lineup expanded to eventually include (later Reelin' In The Years host, XM Classic Rock Programmer) George Taylor Morris in mornings with news from (NBC/Source original News Director & Consultant) Jim Cameron, Entertainment Weekly's) Lisa Karlin mid day, Ken Shelton evenings, and Mark Parenteau (later WBCN, XM Comedy Programmer)starting with late nights and moving to PM drive once Scmid left the air.

In Seattle, KZOK-FM's PD Dave Richards unleashed a locally produced multi-day compilation of all star radio concert and live album recordings called LollaPuyallup in 1993 & Woodinvillestock in 1994. Each ran on the 4th of July weekend. The station was thrilled with the phone response... The Washington State Patrol wasn't. Would be concert-goers clogged their phones, Seattle's already heavily traveled freeways and local streets in the communities whose names were incorporated into the events... All searching for a show that was too good to be true.

Ahhh... theater of the mind... where every seat is perfect!

Hi, I live in Central Connecticut and have been trying to pick up WCBS-FM 101.1 in New York. Here's the problem: We have a station here in CT at 101.3 which is blocking out CBS-FM. I was told by online friends that the GE Superadio might be able to pick it up ok. Well yesterday I went to Sears, no luck. Next stop: Radio Shack who doesn't carry GE products but does carry a similar product. I took a chance and bought it, but it doesn't get CBS-FM at all. However, it does pick up other NY FM stations.

OK...here is my question. Is there another radio I should try? Should I try an external antenna, and if so, what kind? If I went that route it would have to be one that mounts to the radio, since I live in a condo complex where we are not allowed to place anything on the roof.

I could use any advice you could offer. I really would love to be able to pick up CBS-FM. Four of the DJ's I listened to during my pre-teen and teen years are there and I'd love to be able to hear them again. I'm disabled and don't get out much so if I could get this station, it would really be great :)

Thanks for any help you can offer.

Lauren

Ray Collins <rcol@intergate.ca> had written:
| I'm in Canada, larger towns that pay well are really spread out up here.   I
| worked every major market from one end of the country to the other. (only
| skipped the East coast and Winnipeg)  Kids are the problem, "we want to stay
| here and graduate high school with our friends".  That statement is a killer
| on broadcasting careers. ;-))   You really do have to move, it isn't a bad
| thing, it  "widens you"  of course eating at McDonalds can do the same
| thing. -))  My wife is in the business, so that made for  a more
| "understanding" attitude.

The bottom line is the answer to the questions that one has to ask
oneself at certain points:

Is this a career worth sacrificing my family for?

Is this a career worth giving up my home community for?

Considering the lousy pay, poor working conditions, and the
disrepect that prevails at most (not all, but most) stations
regarding radio news and news people, the answers are obvious for
almost anyone except the very, very lucky few.

Oh, and a personal note: I know Mr Nuzum from other venues and he
is not a bozo. The fact that the Conventional Wisdom Crowd is
treating him as though he were one is something that I find revolting.

Really want to hear WCBS-FM? If you're SERIOUS about it, you can do it, but not with a Superadio.

You need two things: directionality and selectivity. For directionality (focusing your receiver's "ears" on a narrow slice of your radio horizon), you can't beat an external Yagi-type antenna, ideally an APS-9 or APS-13 or similar. If you really care ONLY about getting WCBS-FM, you can at least save some money by not installing a rotor; just point the thing southwest at NYC and leave it there. (You're still looking at $100 or so for the antenna, plus mounting hardware, lead-in cable and installation.)

For selectivity (making sure your receiver is hearing just 101.1 and not 101.3 or 100.9), you need to start with a decent component-type FM tuner - then get someone to open it up and replace the factory filters with narrower (110 kHz is good, generally) ones. If WKCI on 101.3 is still a problem, you can install a 101.3 trap (I use ones from Microwave Filter that cost about $25) - or you can try something even more dramatic: installing a second antenna aimed AT WKCI and what's called a "phasing box" that will combine the signals from both antennas in a way that cancels out the unwanted WKCI signal and, ideally, leaves WCBS-FM intact.

You can find good used receivers for less than $100 if you're lucky; the filters are cheap (a buck or so each), but need to be installed by someone who knows what they're doing.

Good luck!

Unfortunately, that's something most of today's broadcasters have forgotten about, and young people coming into the business have no clue about it whatsoever because they've never been exposed to it.

I have a teenaged intern who went slack-jawed when she heard an aircheck of the legendary East Coast morning man, Jack Gale, whose whole show was "theatre of the mind," complete with a cast of recurring characters that were all actually him.  This very bright, talented kid had no idea such a thing was possible, and nothing like it would ever have occurred to her.   It gave her a whole new insight about the power of our medium.

I think a lot of the spread of team morning shows is a misguided search for this sort of effect.  Programmers somehow think putting more people on mic will make some kind of magic in and of itself. People stage idiotic and/or gross stunts like the O&A fiasco because they no longer understand how to use words and sounds to stimulate the listener's imagination.

Personally, I'd rather listen to one really creative on-air performer working by him/herself to paint pictures in my mind, than a roomful of idiots laughing at each others' dirty jokes or pulling stupid pranks in public.

I was told by online friends that the GE Superadio might be able to pick it up ok. Well yesterday I went to Sears, no luck. Next stop: Radio Shack who doesn't carry GE products but does carry a similar product. I took a chance and bought it, but it doesn't get CBS-FM at all. However, it does pick up other NY FM stations.
>

Lauren,

A VHF-TV-only antenna. The FM radio band is just above TV channel 6. Most good stereo sets have a terminal for an external antenna.

If you can find a VHF-only external TV antenna, and point it toward New York (and away from the local station) you *might* be able to get it.
If the interfering station is in the same direction from your home as WCBS-FM's antenna, however, you're still going to be out of luck.

Years ago, a lot of firms used to make FM-radio yagi receiving antennas. A search
on the net shows that Winegard still does, look here --

http://www.tvantenna.com/products/fmreception/fmantennas.html

The second one on that page is what I'm referring to. You would not need a rotor if WCBS-FM is the only station you want to hear.

The GE Super Radio is great for AM, but for FM it's not necessarily any better than a good sensitive stereo receiver. It is still available but you would have to order it from the web. Sears nor Radio Shack carry them.

Antennas and receivers may be either 300 ohms or 75 ohms impedance - you can match them with a transformer (which is a couple of bucks).

Radio Shack probably doesn't carry FM yagis, as far as I know. You would have to go to the web, probably.

Greg

The GE Superradio has great AM sensitivity and good audio but but terrible everything else.

Try the Crane CC Radio. It tunes in much smaller increments and you might be able to tune out the local. The best bet would be to combine it with a directional antenna if the two stations aren't in the same direction from your location. That's going to be tough if you can't mount the antenna outside.

It's very hard to discriminate against a strong local station on a channel immediately adjacent to a desired distant station. The best way is to use a rooftop Yagi antenna which can be oriented to suppress signals coming from the direction of the local while allowing reception of the distant signal. This will not work if you are located such that the local signal is coming from the same direction as the distant one. If that be the case, you are pretty much out of luck.

Good luck!

umar

Absolutely! Fantasy Park was a big deal in Dallas. I had several
friends who worked on it. It was a terrific idea and beautifully done.

Just a quick question about this setup... Do you orient the Yagi
horizontally or vertically?
```

95% of today's FM's are circularly polarized, so which way would you set that baby up?
I am familiar with a company in Cincinnati that does frequency checks for stations well over 100 miles away. I know of 1 station they measure that is a class A (6kw) 70 miles away and there is a 1st adjacent class B in Cincinnati. I've always wondered how they did it.

Where do you live? In my part of the country there are cochannel stations every 100-150 miles. In all directions. 300 miles is out of the question.

Your best chance in your situation is to use a sensitive FM receiver with good selectivity.  You might look at the Cambridge Soundworks Model 88 at ~$150, which not only has those characteristics, but sounds great, as well. Maybe you can order one on approval?

There is no practical way to use an external antenna, or to insert a filter for 101.3 with many table radios, because they don't have the input connector needed.

Besides, any discrete filter that attenuates the interfering signal on 101.3 also will greatly affect the signal on 101.1.  Don't bother, even if your receiver does have an input for an external antenna.

R. Fry
Quincy, IL

PS:  WCBS-FM might be operating from temporary facilities following the WTC disaster, and not have their normal coverage right now.  Maybe someone else on the NG will know?

Well........20yrs ago I lived in Northern Oklahoma, and could recieve Dallas
at 280 miles away with a 60 ft antenna and an FM signal booster (magnum 2002
unit). Clear strong stereo day and night from Dallas. (though Dallas had
lousy programming). I prefered to listen to KAYE (100 watter 60 miles to the
northwest - college radio), and KBUZ in Arkansas City. Both stations played
entire Albums both side and without commercials!!!!!!!!.......that was when
radio is decent........I'd not spend money on such a setup today, with all
the commercials/rant-jocks/and clear channel garbage, and the death of real
college radio............ ;-(.

Hello all,

the former URL of the National Broadcasting Corporation, Nigeria

http://www.nbc-ng.org/

now leads to a download of a 0190 dialer (5-6-5-23.exe by download1.0190-dialer.com) Beware! Do not visit this URL if you did not turn off ActiveX in your browser! Then the download would start automatically.

I don't know if those dialers can be dangerous in other countries, but in Germany they can lead to a huge telephone bill as they change the dial in number of your internet account...

While Google still lists that URL, it  was deleted already from the radio-portal database, which lists more than 37.000 radio related Links.

Regards,
Willi, DJ6JZ

If all you need to do is measure frequency, you can tolerate a fair amount of interference -- particularly if the station being measured is willing to cooperate by killing its modulation.

Not so. Not so at all. Upgrading the internal filters in a good receiver (Onkyo TX-9090 or the like) to 110khz will do a fine job of improving adjacent-channel selectivity without damaging the signal you're trying to hear, except perhaps by adding a bit of distortion (to what, in WCBS-FM's case, is a heavily-processed signal anyway).

As for the external traps I'm using (Microwave Filter 5KFM- series), you can see the response curve here:

http://www.microwavefilter.com/fastrap/response.htm

(Look for Response Curve #18). Yes, it attenuates the adjacent-channel signal somewhat, but depending on where you are in Connecticut (I'm guessing somewhere in New Haven County by your question), by no more than 15 dB or so, and you should still have plenty of 101.1 signal left even after that.

>PS:  WCBS-FM might be operating from temporary facilities following the WTC
>disaster, and not have their normal coverage right now.  Maybe someone else
>on the NG will know?

WCBS-FM, like most of the NYC FMs, was on the Empire State Building's ERI master antenna before 9/11/01, and nothing has changed since then. The full details on the stations that were affected (most TVs, 89.9, 93.1, 93.9, 103.5) are here:

http://www.fybush.com/wtc-recovery.html

Sadly we note the recent passing of another of radio's one-man cast of thousands, Ron Landry who died 09-16-02 in LA after a year-long battle with cancer.

Formerly mornings @ WDRC Hartford & afternoons @ WBZ Boston, before moving to Los Angeles and KGBS, 1969-74; where he became nationally known as the co-creator of the Grammy winning "Ajax Liquor Store" album with the late "Emperor" Bob Hudson, Ron's broadcast career wrapped up at KFI, 1974-75.

They appear to be using the Empire State Building since at least
April, 1999, if I read radio-locator.com correctly.

There is a challange to the deal that would sell the timeshare alloted to
KKSU to WIBW.

Last Friday, the Kansas Family Farm Coalition asked the Attorney General to look into it, stating that it believes that the sale of KKSU would not be in the best interest of Kansas Farmers.  The AG has declined to do so.

Since I have not seen any indication that KKSU or WIBW have filed anything with the FCC, I would suppose that this group would probably file.  If not, then everyrhing should go according to schedule.

Here's an answer from Scott Fybus to a filter question.  Scott is an FM entusiast, a newsman, but he has at least a little technical knowledge.

============ from Fybush to rec.radio.broadcasting =========

"Richard Fry" <rfry@adams.net> writes:

>Besides, any discrete filter that attenuates the interfering signal on
101.3
>also will greatly affect the signal on 101.1.  Don't bother, even if your
>receiver does have an input for an external antenna.

Not so. Not so at all. Upgrading the internal filters in a good receiver

(Onkyo TX-9090 or the like) to 110khz will do a fine job of improving adjacent-channel selectivity without damaging the signal you're trying to hear, except perhaps by adding a bit of distortion (to what, in WCBS-FM's case, is a heavily-processed signal anyway).

As for the external traps I'm using (Microwave Filter 5KFM- series), you can see the response curve here:

http://www.microwavefilter.com/fastrap/response.htm

(Look for Response Curve #18). Yes, it attenuates the adjacent-channel signal somewhat, but depending on where you are in Connecticut (I'm guessing somewhere in New Haven County by your question), by no more than 15 dB or so,
and you should still have plenty of 101.1 signal left even after that.

>PS:  WCBS-FM might be operating from temporary facilities following the WTC
>disaster, and not have their normal coverage right now.  Maybe someone else
>on the NG will know?

WCBS-FM, like most of the NYC FMs, was on the Empire State Building's ERI master antenna before 9/11/01, and nothing has changed since then. The full details on the stations that were affected (most TVs, 89.9, 93.1, 93.9, 103.5) are here:

Amateur Radio Newsline™ Report 1310 – September 20, 2002

Amateur Radio Newsline report number 1310 with a release date of Friday, September 20 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. Out of the tragedy of 911 comes a new way for hams to be prepared. Find out more on Amateur Radio Newsline report number 1310 coming your way right now.

(Billboard Cart Here)

**

EMERGENCY COMMS: NEW DATABASE BEING CREATED

A new ham radio volunteer database is about to become a reality. Amateur Radio Newsline’s Henry Feinberg, K2SSQ, has the story of how an act of terror lead to its creation:

--

A year ago, when al-Quida terrorists hit in New York City, Pennsylvania and Washington D-C, it was Joe Tomasone, AB2M, who put together an Internet based volunteer registration system. This strategy permitted ham radio volunteers to be quickly credentialed and dispatched to the various disaster sites where they were needed. Last May at the Amateur Radio Newsline sponsored Ham Radio Town Meeting in Dayton Joe explained that the database came about because he wanted to do somthing to help in the wake of the attacks:

--

Tomasone: “Not knowing what else to do I sent an e-mail to Tom Caruba, KA2D, who is the Section Emergency Coordinator for the New Yourk City and Long Island. I said that I know there is nothing that is nothing I can do to help, but let me know if there is somthing I can do to help.

And I expected that maybe he would request for me to make some phone calls or do some health and welfare traffic outside the area because the phones were in scetchy status in the New Yoork City ares. A short time later a request came back that I wasn’t sure how to answer. They asked: ‘...can yoiu make a databse that will track the hudreds of requests we are getting [from hams] to come down and volunteer and can we put that up on the Internet so that it can be accessed.’

I thought about it for a few minutes and I said yes, I think we can do that.”

--

Joe Tomasone did do it. The result was a steady flow of volunteers being dispatched when and where they were needed.

--

Tomasone: “On the registration page as many of you were able to see, it asked for basic information such as your name, your call sign, your address, contact information, what ARRL Section you were from and what your availability was. Now once that was put into the database, it was able to be queeried by a number of people who were given access to that portion of the siute. That enabled them to do searches based on a number of criteria.”

--

During his Dayton presentation, Joe mentioned his desire to grow what became known as the World Trade Center Volunteer Database into a general event activation management program for ARES, RACES and SKYWARN activities. Now Joe is about to get that project off the ground. But to do it he needs your help.

Joe tells Amateur Radio Newsline that making it happen will take people and new ideas. To that end, he has created an e-mail mailing list to solicit concepts and volunteers for this project. Anyone who is interested can either sign up directly by sending an e- mail to volreg-request@lists.ab2m.net or by visiting wtc.ab2m.net on the World Wide Web. Please note that their is no w-w-w in that U-R-L. Its simply wtc.ab2m.net.

For the Amateur Radio Newsline, Im Henry Feinberg, K2SSQ, in New York.

--

Dont worry if you missed that U-R-L. We are putting a link to it from our website at www.arnewsline.org. (ARNewsline™)

**

RADIO LAW: CC&R BILL HR 4720 ATTRACTS ADDITIONAL COSPONSORS

Good news on the legislative front. Five more cosponsors now have signed aboard HR 4720. This is a bill in Congress aimed at providing relief to amateurs faced with private deed covenants, conditions and restrictions when they want to put up antennas.

According to a story in the ARRL Letter, the list of cosponsors is now up to 23 members of the U-S House of Representatives who have agreed to sign on to the measure. This includes two radio amateurs: They are Oregon Republican Greg Walden, WB7OCE and Arkansas Democrat Mike Ross, WD5DVR. Walden was one of the two original cosponsors of HR 4720 with Texas Republican Pete Sessions. Walden and Ross are believed to be the only Amateur Radio licensees in the U-S House of Representatives.

It was New York Democrat Steve Israel introduced HR 4720 back on May 14th. The measure would require private land-use regulators such as homeowners' associations to "reasonably accommodate" Amateur Radio communication consistent with the PRB-1 limited federal preemption. PRB-1 now applies only to states and municipalities. (ARRL)

**

## RADIO RECORDS: 24 GHZ RECORD BROKEN

The ham radio distance record for a contact on the 24 Gigahertz band has been broken again. Jeramy Boot, G4NJH, is here to tell us who did it and how:

--

On the 7th of September Dave Robinson, G4FRE, operating as WW2R/5, and Al Ward, W5LUA, made a record-breaking contact on 24,192MHz. Dave was operating portable in EM41HC near Natchez, Mississippi, and W5LUA was operating from his home in EM13QC, at Allen in Texas.

CW signals of 549 were exchanged. The distance, based on six-digit to six-digit grid squares, is 337.3 miles or 542.8 kilometres.

The sked was set up earlier in the week via e-mail with no liaison on any band, including cellular. Attempts to repeat the contact over the same path 12 hours after the initial QSO resulted in no signals being identifiable either way on 10GHz, suggesting the morning QSO was under enhanced tropo conditions.

Jeramy Boot, G4NJH

--

No signals were heard on 2 meters or 70 centimeters at the time of the 24 Gigahertz contact was completed. Previous experiments on 10 gigahertz last July also resulted in no signals being identified. (GB2RS)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Catalina Amateur Radio Association net serving our home -- Los Angeles California.

## ENFORCEMENT: 20 METER NET INTERFERENCE

Interference to nets on 20 meters in the South Pacific. Q-News Graham Kemp, VK4BB, reports from Brisbane Australia:

--

20 Meter interference. The Maritime nets on 14.315 MHz are having problems with interference. Chris VK2UW says the ACA have been notified and are monitoring, but a bit of help from Hams re locating the source of the Interference would be appreciated.

It is Man made and is regular both by making noises and CW type transmissions. The nets involved are the Pacific InterIsland Net on 14.315 MHz 0800 Z each night and Tony's Net on 14.315 MHz 7.00am EST each day.

>From Q-News Australia, I'm Graham Kemp. VK4BB, reporting for the amateur Radio Newsline.

--

If you hear the interference and can get a bearing on it, please report your findings to your nations Intruder Watch coordinator. In the United States that's the American Radio Relay League. (Q-News)

**

ENFORCEMENT: REPEATER ORDERED OF THE AIR

Back stateside, the FCC has ordered a repeater operator to take his system off the air. It happened in California. The agency's Daryl Duckworth, NN0W, explains the action taken:

--

Duckworth: "A repeater shutdown order was issued to Steven Decho, KE6FX, of Draper Utah regarding operation of his repeater or remote base on Mt. Disappointment in the Los Angeles area. Decho was told in a letter to shut down operation until he either obtained current coordination or submitted a detailed, specific and acceptable plan to the enforcement bureau demonstrating how he would prevent interference to the WA6UZS repeater operation."

--

Late word from the FCC is that Decho has replied to the agency. He has shut down the Mt. Disappointment system. (FCC, RAIN)

**

RADIO SURVEY RESULTS: 1 IN 10 NEVER HEARD OF IRLP

A recent survey conducted by the website Radio-Scanner.co.uk shows that 1 in 10 radio enthusiasts worldwide have never heard of the Internet Radio Linking Project better known as I-R-L-P. The survey did however show that only 20% of radio enthusiasts were against the idea, with a massive 71% backing it. 9% were apparently undecided.

The Radio-Scanner release did not say if the survey was limited to licensed radio amateurs or included others such as S-W-L's and monitoring radio enthusiasts. Also, no data was published regarding knowledge or acceptance of other ham radio Internet linking protocols such as I-Link, Echolink, Hamlink or E-Q-S-O. (Radio-Scanner)

**

RADIO LAW: GROUP WARNS ON NEW BROADBAND REGS

A consumer action group says that some proposed U.S. government policies could harm competition in the broadband Internet market. This says the Consumer Federation of America will result in reducing choices and driving up monthly fees for users who want high-speed access.

The C-F-A contends that by easing regulations on incumbent cable television and local phone companies, the Federal Communications Commission will hasten the demise of independent Internet providers who reach users over existing phone and cable lines. They say that , consumers will suffer as cable and local phone giants that currently dominate the broadband market will no longer be driven to lower prices and create innovative products.

The FCC ruled in March that cable providers do not have to share their systems or provide open access for competing Internet services, and the agency is currently reassessing its line-sharing rules for local-phone giants like Verizon Communications and SBC Communications Inc. (CFA)

**

HAM RADIO HELP: IHS LOOKING FOR VOLUNTEERS

The International Health Service is looking for ham radio volunteers with High Frequency portable operating experience to go to Honduras from February 14 to March 2, 2003. The International Health Service is a non-profit organization based in Minnesota that provides free health care to the people of Honduras. Applications are being taken through the beginning of October. If you are interested please contact John Kirckof, KB0UUP by e-mail to jmkkek@runestone.net or phone him at 320-634-4386. The I-H-S web site can be found at www.ihsofmn.org (HIS)

**

NEW RELEASES: PASSPORT TO WORLD BAND RADIO

Media Network reports that the 2003 edition of Passport to World Band Radio is now available for ordering from Universal Radio. Priced at $15.90, Passport to World Band Radio is the bible of S-W-L's and other radio monitoring enthusiasts around the globe. More information is on the web at www.universal-radio.com. (Media Network)

**

SPECIAL EVENTS: THE COAST GUARD AUXILIARY 63RD ANNIVERSARY ON THE AIR

The U.S. Coast Guard Auxiliary' 63rd Anniversary special event Radio Day is slated for Saturday October 5th. The event will take place at all Coast Guard Auxiliary Districts across the United States. Operations will take place on 40 through 10 meters. Listen for call signs like K1G, N2A, W8E and the like and Q-S-L as directed on the air. (Press release)

**

HAM RADIO IN CYBERSPACE: ARRL CENTRAL DIVISION NOW ON THE WWW

The American Radio Relay League’s Central Division now has its own home in cyberspace. Its the creation of Clay Melhorn, N9IO. The good news is that there is no advertising of no pop-ups on this site. Oh yes, you will find it on the web at www.central.arrl.org. (Listener contributed)

**

## CONVENTIONS AND HAMFESTS: LIMARC RESCHEDULED

The LIMARC Hamfest that was to be held Sunday September 15th has been rescheduled to Sunday November 10th because Mother Nature would no cooperate. According to Eddie Muro, K2EPM, inclement weather caused the last minute cancellation. Muro adds that the venue will remain the same -- Briarcliffe College in the town of Bethpage New York. More information is on the web at www.limarc.org. (LIMARC)

**

## CONVENTIONS AND HAMFESTS: CSVHFS IN MILWAUKEE

208 people attended the recent Central States VHF Society Conference held in Milwaukee Wisconsin. Conference Proceedings are available for $20.00 shipped domestic United States from the Central States VHF Society in care of Bruce Richardson W9FZ, 2330 Lexington Ave S. #312, Mendota Heights, Minnesota 55120 . And less we forget, next year's conference is in Tulsa Oklahoma on the last weekend of July. (VHF Reflector)

**

## HAM RADIO NEWS SERVICES: GB2RS SUBSCRIBABLE LIST NOW ON YAHOOGROUPS

Also. the Radio Society of Great Britain’s weekly news bulletin is now available over a Yahoogroups mailing list. The news is posted over the weekend, after it has been released for non RSGB members. You can subscribe by sending an empty e-mail to GB2RSnews-subscribe@yahoogroups.com

Yahoogroups is also the home of the Amateur Radio Newsline e-mail list you subscribe to it by sending a similar empty e-mail to arnewsline-subscribe@yahoogroups.com. (Listener contributed)

## BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

## EMERGING TECHNOLOGY: NEW CATV CHIPS REVOLUTIONIZE SETY TOP BOXES

A new chipset developed in Canada may revolutionize set top T-V converter boxes. The spinoff of this technology could also impact future ham radio gear. Norm Seeley, KI7UP has more:

--

Zarlink Semiconductor of Ottawa Canada has announced availability of a new high performance chipset for tuning analog and digital RF cable TV signals. Zarlink's two-device chipset claims to deliver reception of all analog and digital cable channels, while allowing designers of multi-service cable set-top boxes to shrink tuner designs by 50% and reduce tuner costs by up to 20%.

The Zarlink chipset is comprised of a broadband tuner I-C and a new chip that handles frequency down-conversions and intermediate frequency amplification. Zarlink says that the new I-C’s implement active RF and IF amplification circuitry directly in the silicon wafer structure. In fact, the circuitry inside the count-down integrated circuit eliminates up to 40 external components from high performance, double-conversion tuner designs.

Norm Seeley, KI7UP.

--

The same Zarlink based technology could conceivably be used to shrink the size of other electronic gear that will require advanced R-F signal processing. This could include the next generation of digital communications ham radio gear. Ham gear that could be no bigger than a set-top CATV converter box. (Based on Zarlink release)

**

EMERGING TECHNOLOGY: INTEL TO INTRODUCE 3 GHZ PROCESSOR

Computer industry sources say that Intel may be moving up the introduction of its new 3 gigahertz Pentium 4 processor. Intel had originally planned to introduce the 3.0 gigahertz Pentium 4 processor by the end of the year. The earlier date will give manufacturers an edge in getting machines ready for the Christmas buying season. Intel also is reportedly accelerating the introduction of its 2.80 gigahertz Pentium 4 as well. (Via Internet)

**

RADIO IN SPACE: IO - A JOVIAN TRANSMITTER

>From the science page comes word of a kind of natural transmitter in orbit around the planet Jupiter that has no magnetic field. Roy Neal, K6DUE, has more:

--

There are many mysteries in deep space. Men and their machines are hard at work trying to resolve them. At the heart of unmanned space flight, the Jet Propulsion Laboratory, in Southern California is home to the huge antennnas that control the space ships that go out in the attempt to unlock the secrets. It also is home to amateur radio station W6VIO and many of the hams who run the station take part in the deep space endeavours.

The latest report says they have found that IO, a volcanic moon circling the planet Jupiter, transmits charged particles…easily detectable as power and noise. But the moon apparently has no magnetic field. These data were gathered by NASA’s Galileo spacecraft as it orbited Jupiter for the last 6 years.

The discovery took on importance last Fall. The researchers were trying to determine whether the moon created its own magnetic field inside the massive one generated by Jupiter, the largest of all our solar planets. When Galileo crossed the path of a magnetic field connection between IO and Jupiter, suddenly the density of the charged particles through which it was passing increased…but no magnetic field was

detected. Leaving the researchers, in their earthly control room, yet anther puzzle of the universe to solve.

For the amateur radio newsline, Roy Neal, K6DUE
--

More on this fascinating finding is available in cyberspace at www.jpl.nasa.gov/videos/Io (NASA-JPL)

**

### INTERNATIONAL - CANADA: VO1MX APPOINTED ASSISTANT DIRECTOR

On the international wire word that Dan Goodwin, VO1MX, of Gander Newfoundland has been appointed as an Assistant Director for the Radio Amateurs of Canada Atlantic Region in Central Newfoundland. Goodwin fills a vacancy that existed in the central region of Newfoundland serving the major centers of Gander and Grand Falls-Windsor. (RAC)

**

### INTERNATIONAL - ARGENTINA: HAMS TO GET 136 KHZ ALLOCATION

Hams in Argentina are getting access to the 136 kHz band. Roberto Beviglia, LU4BR, who is the President of the Argentinean national amateur radio society says that his group made the rules change request to the Argentine radio regulatory department. The government agreed. As a result, 135.7 to 135.8 kHz has been initially allocated to that nations amateur service on a secondary basis. (GB2RS)

**

### DX

In DX, word that Laurence Howell, GM4DMA, is active as portable 9M6 on the High Frequency bands and 6 meters from Sabah now until the 30th of September. He is there to teach communications theory and to set up a new country headquarters communications base for the youth development charity Raleigh International. (GB2RS)

And the ARRL DXCC desk has announced a new 30 meter DXCC Single Band award. Applications for this award will be accepted beginning on October 1st. The new 30 meter DXCC certificates will be dated, but not numbered. (ARRL)

**

THAT FINAL ITEM: FLYING THE FLAG

And finally this week a look back to the way ham radio commemorated 9-11. This week its the story of two Florida hams who took to the air to fly the flag. In their case it was not by radio but rather in a Cessna 172 aircraft carrying several U-S flags as a part of an event called Flight Across America. The pilot at the controls was veteran aviator Steven Crow, K4CPX:

--
K4CPX: “What they did was to assign somebody from every state to carry their state flag into New York City to be there originally on 911. But they locked down New York City again for 911 so they had to do it a few days early.

Those airplanes that could not come to New York or wouldn’t because there were only fifty airplanes carrying state flags -- they wanted to have an airplane at each airport fly aloft for this commemoration which we did.

Then I came up with the idea of carrying flags for individuals. For people who wanted their flag commemorated with a flight on Flight Across America. So we did and we carried five flags aloft and we put a seal on them and signed them and gave them back to the people after we got back on the ground.”
--

Accompanying K4CPX was Wendall Peterson K0REQ as co-pilot and Julius Ehland as the bearer of the flags. And on the morning of 9/11 the three made their way to Punta Gorda’s Charlotte County Airport only to find it not to be a great day to venture into the sky:

--
K4CPX: “We went out to the airport anyway and stood around watching the rain sweep through. It is a pretty large airport with 6000’ runways and I think we were the only pilots and the only flight that was even there that day.”
--

Finally a slight break in the weather:

--
K4CPX: “We hung around and hung around another couple of hours -- all the time watching -- and looking at the RADAR -- and check it and see this stuff coming through. And we found a bit of a hole and decided -- lets jump in and take a quick look from the end of the runway and maybe aloft and maybe we can get the flight in.”
--

And that’s exactly what they did:

--
K4CPX: “We took off; climbed up to 1000 feet, turned sharply ahead of some heavy weather coming in and came right around the airport and landed on another runway and we were on the ground. We were probably in the air a total of maybe 12 or 13 minutes.”
--

The important thing is that the flags were flown and returned to their owners. And while Steve and Wendall did have some 2 meter ham gear on board the Cessna they never bothered to turn it on. This was 9/11 and commemorating the day was what the flight by these two radio amateurs and their friend had really been all about. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that our survey how ham radio is being used by home schoolers is still taking place. If you are a home schooling parent or a student being home schooled, please send your thoughts on the subject by e-mail to newsline@arnewsline.org. So far the responses we have received are very interesting to read.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Ken Locke, N8PJN, saying 73 and we thank you for listening." Amateur Radio Newsline(tm) is Copyright 2002. All rights reserved.

>
> I have a teenaged intern who went slack-jawed when she heard an aircheck of the legendary East Coast morning man, Jack Gale, whose whole show was "theatre of the mind," complete with a cast of recurring characters that were all actually him. This very bright, talented kid had no idea such a thing was possible, and nothing like it would ever have occurred to her. It gave her a whole new insight about the power of our medium.
>
> I think a lot of the spread of team morning shows is a misguided search for this sort of effect. Programmers somehow think putting more people on mic will make some kind of magic in and of itself. People stage idiotic and/or gross stunts like the O&A fiasco because they no longer understand how to use words and sounds to stimulate the listener's imagination.
>
> Personally, I'd rather listen to one really creative on-air performer working by him/herself to paint pictures in my mind, than a roomful of idiots laughing at each others' dirty jokes or pulling stupid pranks in public.

When Steve Dahl began in radio, his show was "theater of the mind" with an array of strange, off-color but discernable characters (even if the voice characterizations weren't at Jack Gale level). Of course, this is if his PD would let him. When he hooked up with Garry Meier, he started going towards the "Real Life Radio" concept that gave him his biggest success ("We talk about things that actually happened, we use our real names, we don't do phony DJ voices"). The combination of Dahl, along with Howard Stern and Scott Shannon's "Z Morning Zoo," closed the book on creative morning/afternoon drive radio and paved the way for teams endlessly giggling through joke material and idiot stunts.

In Chicago, when Pete Stacker, the production genius at Q101, left in 1987 or '88 to do morning drive at WCLR, he initially got to do highly-produced adult humor (as opposed to adolescent humor) with a cast of characters that did include other people, but was not a bunch of forced gigglers reading show prep material. Before the station even gave it time to work, the call letters got changed to WTMX, a new PD came in and the show got reduced to Stacker as straight man for an actor doing a "Sout'(west) Side Chicaga" character, along with a talented woman named Beth Kaye being forced into a giggle-on-cue traffic reporter role. Of course, it was clean ('TMX, after all, being a Bonneville station), but something that had promise became just another limp AC format imitation of Scott Shannon. What a shame.

Once again, next month, I'll be doing the required NRSC measurements for a number of stations in the Connecticut area. If you have an AM station that's due to be measured, you can contact me via email re: details.

Hi all,

I am the President of a Non Profit French radio and would like to be help=
ed
...
We search for Broadcast Transmitter and Low Power HF Amplifier.

For instance (as i think my english is not excellent !) :

88-108 Working Broadcast Transmitter with 20 Watts Power
And/or 300 or 500 Watts Max HF Amplifier in the same band.

Whe have no money at all ... or so little ...

If you have and old (but working) such thing maybe you can donate ?
we will pay of course for the transport fees.

Wish i was not too boring, but if you can help us we will Greatly
appreciate...

U can contact me by answering this Post if you want...

Thanks in advance,

Regards.

Fr=E9d=E9ric.

-----------------

Response to Scott Fybush post of 9/24/2002 11:18PM

WCBS-FM is licensed for 6.8kW ERP from 404m HAAT.   The path length from the transmit antenna to central Connecticut is roughly 90 miles.  According to the FCC
f(50,50) propagation curves, WCBS-FM should have a field strength of about 19.4 microvolts/meter at that distance.

That value is expected 50% of the time at 50% of locations for a matched dipole receiving antenna located about 9m above ground level, in open country.  Field strength inside buildings and in "urban clutter" can be reduced by 10dB or more, which means that the WCBS-FM signal could be around 6 microvolts/meter at the built-in antenna of the receiver in this application.  With a strong local station on an adjacent channel, few, if any FM broadcast receivers would be capable of producing good stereo performance in a field strength that low, no matter how narrow the filters in its IF strip.

The scale of the plot of the filter response you referenced for the MFC 5KFM is 1MHz per horizontal division, and 10dB per vertical division.  Therefore it would attenuate a signal centered 0.2MHz above or below the notch center frequency by something over 35dB, not the 15dB you stated.  AND the response is changing very rapidly in those regions, which would add huge amounts of AM and differential group delay on FM signals trying to be received there. Obviously it would take an extremely large voltage at the filter input to have enough desired signal left at its output to be useful to a receiver. In the case of WCBS-FM in this scenario -- it just isn't there.

Richard Fry, CPBE

If the terrain is VERY favorable, you won't even need an external antenna.

Back in the late 80s, I worked for KXIQ in Bend, Oregon.  Our transmitter was
located in the Cascade mountains, on Jack Pine Ridge.  100kW from 5,000+ feet
in the air.  Our signal was received regularly for about 200 miles to the
north, south, and east (the Cascade range was to the west.)

WCBN WILL DESTROY YOUR FEEBLE FORMATS

WCBN - 30 Years of Freeing Your Mind - Listen to us online!

WCBN is the University of Michigan student-run community freeform radio station in Ann Arbor, Michigan. We broadcast at 200 watts to the University and its surrounding communities from the basement of the Student Activities Building in downtown treetown.  We have been broadcasting a genre-less overview of music, news, and public affairs for 30 years.

WCBN's musical format is freeform, with some specialty shows. Freeform involves all different kinds of music, including jazz, reggae, blues, hip-hop, country, rock, and just about everything else under the sun. Instead of telling our DJs what to play, we allow them to select their own recordings from our vast and unique library. It is their responsibility to mix together many different kinds of music in an intelligent fashion, and show links between musical genres.

Click here to listen to our live WCBN-FM Ann Arbor broadcast!
http://wcbn.org/listen.html

2002 is the 30th birthday year of WCBN-FM
_AND_
we celebrate 55 years of student broadcasting at UM

For sale:

Partial ownership of fulltime AM in Idaho. 1 KW, class "C" (formerly called Class IV, silly!)

Total consideration $60,000 if letter of intent signed by October 11, 2002.

No real estate. Station can go to 50,000 watts, so saith the consultant!

Active or inactive investors for my crazy little joint venture welcome with at least $10,000 each. All investors would be on the board with full voting rights.

This station has been on the air since the 60s of the last century.

"AM bashers" or negative nabobs are clearly not welcome!

(478)741-1710 in Macon, GA. Call anytime you like or email, please. wrecktech@yahoo.com

I am a semi-retired broadcast engineer and Advanced Class ham.

73,

Meyer Gottesman, W6GIV

-------------------

Virtually every radio has AGC (automatic gain control), but its function is to normalize the RF level seen by the AM detector in the receiver.  AGC does not directly control the audio level.

If all stations fully modulate their carriers, then each will be heard with about the same loudness, no matter what each station's field strength is at the receiver.

In other words, the amount of dynamic range that a station chooses to broadcast controls how loud the station sounds with respect to others, and not the presence/absence of AGC in the receiver.

Scott is right about the selectivity and directionality, but if there are still strong signals close in frequency to the one you are trying to get, it's very possible the dynamic range of the RF section of the tuner will stop you from getting the weak station. Most tuners from the Far East are designed for sensitivity, but do not have good dynamic range. They use Automatic Gain Control (AGC) to make up for their inability to handle multiple strong signals close in frequency. The AGC senses the strong signals and lowers the gain in the RF front end, killing the weak stations.
Also, the strong signals mix together, making 'ghost' stations that are combinations of the strong signals, masking the weak stations.
The Model 88 has no AGC and a high dynamic range RF section, along with IF filters that are somewhat narrower than usually used, about 180 KHz wide. This compromises the stereo performance but gains selectivity against adjacent stations. The drawback is that the antenna input is also attached to a line cord antenna which might be a problem if you use an external antenna.
The other possibility is the Tivoli Audio Model One, which has a similar high dynamic range front end, and entirely separate external antenna input. It isn't stereo, but the Model 2 is, for more money.

Hello All.......

I am desperatley seeking help in ubtaining a new console for the high school radio station that I do engineering work for.  We are the 2nd oldest HS radio station in the area (the station just turned 27 years old) and pump out about 300watts, covering a 10mile radius.  Unlike the other local non-comm's, (and most commericals), our staff is live for 60 hours a week, and broadcasts all local sporting events.

Our studio console has been with us since the begining and is on its last legs.  Our budget is depeleted for the year (which just started) due to emergency transmitter and tower repairs, and our yearly budget is so low that we would have to save it for about 10 years just to buy a new console. I am asking...scratch that....begging... any station out there that has an unused console, that you either upgraded out of, or moved facilities and have it left over, as long as it is working, has slide pots, and 12 channels (16 would be ideal), and is stereo, we would be glad to take it off your hands, and the school district will issue a letter so you can write it off as a donation at the end of the year.

Please reply directly to me:    matt-at-liradio-dot-com.
(broken up for spam protection...please fix by replacing the at with an @
and the dot-com with a .com...there
are no -'s in my email address)

Thanks
Matt

What tuners do _not_ come from the Far East?  A few, I suppose.   Also, are
tuners that are manufactured in the Far East necessarily designed in the Far
East.

They use Automatic Gain Control
> (AGC) to make up for their inability to handle multiple strong signals
close in
> frequency. The AGC senses the strong signals and lowers the gain in the RF
front

The real problem has to do with "capture ratio," the very useful FM
characteristic that makes the stronger station on the frequency _completely_
cover the station with the weaker signal.  This, as everybody knows, does
not happen with AM transmission.  If the signal from an adjacent channel
station is bleeding through on your desired frequency, you are doomed if the
station you want to receive has a weaker signal on it's assigned frequency
at your location than the slop-over signal from an adjacent frequency.
Yeah, there are ways to counter this effect with filters and other screwing
around with antennas and the receiver, but you'd better be ready to spend
quite a lot of money.  Hell,  IMHO there isn't a radio station in the entire
U.S. that's worth spending a lot of money to receive.  Oh, maybe WOR or WGN.
I dunno.

(Good stuff cut)

I'm currently seeking info on the Fairchild spring reverb units that were used
in Radio stations, and recording studios as to the number of models made and their
sound quality. I've heard a lot of mention of them. I'm gussing they
were popular in the fifties and sixties? Any help appreciated.

I have a pair of them.  They were made in the late 1960's.  I worked at a couple of AM radio stations that used them during that era.  They use three reverb tanks that look like the traditional Acutronics spring reverb that everyone used.  The electronics are modular solid state, with a variety of controls to contour the sound.

They sound "OK" but IMHO the Mix-Mix "Master Room" reverb from the early 1970s sounds better.  It uses the same spring reverb units, but they are suspended in motor oil which dampens the "Ker-Bong" sound.

Chuck

Does anyone know of an on-line source for information about the FM-xxxx numbers on radio towers?  Like how can you link them up to what's in the tower house or on the tower?

This info might help.  I had a similar problem.  I wanted WOGL FM 98.1 in Philadelphia PA but a New York City local WSKQ FM 97.9 was splashing like hell. I was using a five element Wade FM antenna with several different Denon recievers.  After a lot of experimenting I was able to get near perfect 24 hour reception with a Winegard 12 element FM antenna with a Denon TU-800.  Also, if your stuck with not being able to use an outdoor antenna but you have some hight and the correct south/west look you might try grabbing a Grundig satellit 6000 off Ebay.  It's a very old yet extremely hot portable reciever which has a narrow bandwidth option that really works.  The Denon reciever has a supernarrow bandwidth control which also does the job but it's not a portable.  All the new radios out in todays market just don't cut it when it comes to dealing with extreme cases.

Yeah, but with what kind of a directional pattern?  Reminds me of all those AMs back in the 60s and 70s that traded solid 5kW regional signals for wacked out directional patterns with LESS usable coverage than they previoiusly ha.  All so they could tell their clients that "we're 50,000 watts!"

We're looking into some automation software and are getting a little lost...

We're still using CartReady for DOS, and that machine is on its last legs.  Pending that we have about $10k to spend (entirely) on a new system, what are the best options?

We have looked at a few automation systems already, but none of them have really fit our specific needs.  As a 24/7 jocked radio station, most of our programming is actually still done live-assist, and we have little need for full automation.  Essentially, what CartReady for DOS does right now are our direct needs (cueing carts, rotations, a big fat countdown timer, etc), and in the future we'd like to add both music and traffic log integration.  We use CBSI and Selector, for reference.

Any ideas or suggestions?

Thanks a lot,
Mark Makdad

I've heard that the new Motorola "Symphony" DSP IF chip has been shown to
work wonders on separating the various first-adjacent signals in Baltimore
and Washington.  Now we can hope that receivers using these chips will soon
reach the market.

I may have the opportunity to record and edit an hour long radio program for national distribution. Quality will be important. My question is, which software package should I look at to edit this program? I am familier with Cool Edit Pro 2.0 and love its features and interface. I am also familier with Pro Tools LE based systems (PC and Mac). The main use of this program will be editing and polishing the voices of the hosts and the guests rather than actual recording. What tools are out there? Which software packages should I look at?  I love Cool Edit Pro 2.0, is there any reason to change? I know this can open up the PC vs. Mac can of worms as well, but that is another part of my dillemma, so I am interested in opinions along that line as well.

Thanks,

Andy

Depending on your budget, I'd check out Scott Systems, which seems to
be the one chosen by most operations these days.
It can be as simple or as full featured as you like.

Either one will suffice.  Use whichever you can get into production fastest.  If you can get your hands on each, see which one works better for you.  They do the same stuff, only the "ergonomics" are different and people do differ on which they prefer.

# Amateur Radio Newsline™ Report 1311 – September 27, 2002

Amateur Radio Newsline report number 1311 with a release date of Friday, September 27th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Unlicensed stations invade the low end of 20 meters and a tower finding in California highlight this weeks Amateur Radio Newsline report number 1311 coming your way right now.

(Billboard Cart Here)

**

## INTRUDER WATCH:  WORLDWIDE QRM FROM INDONESIA

Unlicensed stations allegedly operating from Indonesia are causing havoc to the D-X beacon monitoring system on 20 meters.  Its interference being heard around the world as we hear from Q-News Graham Kemp, VK4BB:

--
The presence of Indonesian non amateur groups on the various amateur  band frequencies in the  40 and 20 meter bands  is causing severe  concern for all the amateurs of Region 3 and the world over.  While they use amateur radio frequencies for their regular communications, you will never miss the many calls for Prayers and the many jokes and Kookaburra pattern of laughing with old men and young ladies together.

The 40 meter band has several channels of 5 kHz intervals from the lower  edge and these stations have their breeding grounds here. They graduate to  other frequencies and move to 20 meter band, where they are on either side of the International Beacon frequency of 14100 kHz.   Many of us in Region 3, cannot monitor any NCDXF/IARU beacons on this  frequency.

Even though this QRM from Indonesians has been  reported month after month to telecommunications authorities, so far nothing seems to be happening get them off the air.
--

If you hear this QRM, please report it to your nations Intruder Watch coordinator.
(Q-News)

## RADIO LAW:  COURT RULES CITY CANNOT RESTRICT BUSINESS ANTENNA USE

A California Court of Appeals has ruled that a city cannot regulate the type of transmissions that an FCC license holder can broadcast.  It also says that a city ordinance that prohibited a license holder from  broadcasting commercially is preempted by federal law.  Amateur Radio Newsline’s Bruce Tennant, K6PZW, says what the city of Rancho Palos Verdes was trying to write its own rules on this one:

--

Mark Abrams, WA6DPB, lives in Rancho Palos Verdes California.  He is an amateur radio operator and with city approval, Abrams built a 40-foot antenna and 52-foot antenna in the backyard of his home.  The city’s approval of the towers was contingent on their use being limited to non-commercial applications only.  Abrams is also the owner of a business that sells and services two-way radio equipment and holds 76 licenses issued by the FCC which permitted the use of his antennas for commercial purposes.

--

Abrams:  Audio Onlt at www.arnewsline.org.

--

Abrams says that he never used the two city-approved towers to receive or transmit on frequencies for commercial use.  Instead, he used portable antennas mounted on tripods in his backyard and on a mobile tower trailer which he parked in his side yard.

But in 1998 and 1999, the City of Rancho Palos Verdes monitored radio transmissions from Abrams's property and detected the commercial use of frequencies.  The City stated that these transmissions were in violation of an ordinance that required FCC licensees to obtain a conditional use permit from the city's planning commission to operate commercially.

--

Abrams:  Audio only at www.arnewsline.org

--

The City of Rancho Palos Verdes and State of California filed an action seeking an injunction to bar Abrams from, among other things, operating his antennas for commercial purposes.  Abrams answered the complaint and filed a cross-complaint of his own.  It he claimed that federal law preempted the City's ordinance because it prohibited the use of frequencies allocated to him and his customers by the FCC.

--

Abrams:  Audio only at www.arnewsline.org

--

The court says that he can use his antennas for commercial purposes without a city permit.  It says that federal law preempts the City's ordinance banning such use because the Rancho Palos Verdes  requirement that Abrams obtain a permit to transmit a commercial broadcast was preempted by federal regulation.

It says that Abrams's FCC licenses enable him to operate commercially on certain frequencies and the City of Rancho Palos Verdes limitation on his rights are in conflict with federal law. And that’s good news for WA6DPB.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.
--

The Court concluded the City does hold zoning authority, but such authority is limited to the placement, construction, and modification of facilities used for commercial mobile radio services only. (ARNewsline™)

**
RADIO RULES: UPDATE ON NTIA VS. PROPOSED 5 MHZ HAM BAND

Some good news concerning the National Telecommunications and Information Administration opposition to a new Amateur service allocation at 5 Mhz. This from ARRL President Jim Haynie, W5JBP, and General Counsel Chris Imlay, W3KD who say that they are now optimistic about reaching a resolution to issues that could otherwise block plans for the band.

The two met with representatives of the government agency to discuss the NTIA concerns. Haynie says that they came away with a feeling that the NTIA was willing to work with the ARRL to resolve concerns. Until surprise opposition surfaced the FCC appeared to have put ARRL's request for a new, domestic-only, secondary amateur allocation at 60 meters on the political fast track. (ARRL Bulletin)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the Three Rivers Amateur Radio Club repeater serving Philadelphia Pennsylvania.

(5 sec pause here)

**
RESCUE RADIO: HURRICANE ISADORE STRIKS

On Tuesday, September 24th, the FCC declared that a general communications emergency existed for Alabama, Florida, Louisiana, Mississippi, and Texas. This as hurricane Isadore approached the region.

The declaration requires amateurs not use 3.873 MHz during hours of darkness and 7.285 MHz during daylight. Both frequencies are to be protected plus or minus 3 kHz. Only amateurs taking part in the handling of emergency traffic are to use these 6 kilohertz slots.

The FCC said the communications emergency could last as long as 14 days but it actually remains in force until its rescinded. Keep an eye on the ARRL website newspages for ongoing updates on ham radio involvement in this emergency. Its in cyberspace at www.arl.org (From ARRL bulletin.)

**

## HAM RADIO IN SPACE:  V-U-SAT'S MESSAGES FROM ORBIT

A new ham radio satellite to be launched by India wants to carry your message. This, according to VU2NUD who is the coordinator for Amsat-India.

VU2NUD says that V-U-SAT will carry a beacon system with the ability to play back pre recorded messages on command.   They will be transmitted in F-M voice for all the world to hear and your words could be among those it broadcasts from space.  Here's how:

Think of short, meaningful and apropos messages no longer than 15 seconds in duration.  It could be related to ham radio space operations, amateur satellites, famous quotes, sayings or whatever.  Then send it along to VU2SBJ by e- mail to sri@ebhats.com and a copy to ham@vsnl.com.  Mark clearly in the subject:  Message for Beacon.  Then wait to see what V-U-SAT eventually has to say.  (ANS)

**

## ENFORCEMENT:  FCC SETS ASIDE LICENSE RENEWAL

The FCC has notified Scott E. Kamm, of Sioux City Iowa that it has set aside the renewal of his Technician class license grant for N0UGN.  The Commission said it took the action based on recent complaints about the operation of Kamm's station and questions regarding his qualifications to be a licensee.

The FCC notes a Warning Notice by the Enforcement Bureau sent to Kamm last February 5th. The agency says that the  warning was related to Kamm's alleged use of transmitting equipment on 156.300 and 174.000 MHz without a license, and deliberate interference to an Amateur repeater operating on 146.910 MHz.  The letter also pointed out that Kamm's address in the database was incorrect.
And subsequent to that warning notice the FCC says that information came to its attention that Kamm had apparently provided radio equipment to an unlicensed minor residing in Waterbury, Nebraska, and had instructed him on how to operate on the Marine Band and other frequencies.

In his February 11th response to the FCC Warning Notice, Kamm denied setting up radio equipment for the minor, and also stated that he had sold all of his radio equipment.  But the FCC says that it has all of these complaints under review and that Kamm will be hearing from the agency again in the not to distant future.  (FCC)

## SAFETY ALERT:  FLUKE METER RECALL

Test equipment manufacturer Fluke Corporation has announced a voluntary recall of certain models of its digital multimeters.  This because of a delay in readings on the A-C scale above 500 volts.

According to a company release, the meters can take more than 18 seconds to reach a final reading. This could lead users to think that the voltage is lower than it actually is.

The meters involved in the recall are models 175, 177 and 179 of which 17000 were sold in the United States. All of the recalled units have a serial number below 79000000 and were sold between January and October 2001. If you have one, please call Fluke toll-free at 800-260-4819 between 8 AM and 7 PM weekdays Eastern time. More information on the recall can be found in cyberspace at www.fluke.com/rma/default.asp. (Fluke press release forwarded by WA6ILQ)

**

SAFETY ALERT: KODAK DC5000 DIGI CAMERA RECALL

A recall on a popular digital camera. Amateur Radio Newsline's Norm Seeley, KI7UP, has the shocking details:

--
If you own a Kodak brand digital camera model D C 5000, listen up. Eastman Kodak Co. is recalling about 75,000 of these cameras because of a possible manufacturing defect that can cause electrical shock.

According to news reports, the recalled cameras bear the model number DC5000 on the lower front right-hand corner. The cameras also carry a plate on the bottom containing the Kodak product identifier code KJCAA, followed by an eight-digit serial number ranging from 01800001 to 11700825.

The cameras were sold at department, electronic, computer and camera stores as well as mail-order and Web sites from June 2000 through August 2002. Consumers can return the cameras for free inspection and repair by contacting the company at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time.
--

Again, if you own one of these cameras, please contact Kodak at 1-888-793-2977 between 9 a.m. and 8 p.m. Monday through Friday Eastern Daylight Time. (Kodak press release)

**

HAM RADIO ON TV: ICOM JOINS "THE HUMAN RACE"

ICOM America has been named the high frequency communications provider for the television shoe The Human Race. ICOM America has already shipped an IC-706 Mark II G to Boston for use by the show. The IC-706 and additional equipment will be used during an upcoming trek along the actual travel route to be used. The donation is the result of an agreement recently reached between ICOM America's National Sales Manager Ray Novak, KC7JPA, and the shows producer Bill Desjardins, W1ZY. (THR)

## CONFRENCES:  WSWSS IN CERRITOS CA

The Western States VHF-UHF and Microwave Conference is slated for October 11, 12 and 13 at the Sheraton Cerritos Hotel Towne Center in Cerritos California. Hosted by the Western States Weak Signal Society, the conference provides VHF and UHF enthusiasts the knowledge and tools to work DX and contests on 6 meters and up.   This years banquet speaker is ARRL 1st Vice-President and VHF/UHF contester Joel Harrison, W5ZN.  More information is on the web at www.wswss.org.  (WSWSS)

**

## BREAK 2

This is ham radio news for today’s radio amateur.  From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

## RADIO HISTORY:  PEARL HARBOR REPORTER S.K.

He wasn’t a ham, but Hugh Lytle was a communicator in his own right.  History remembers Lytle as the man whose teletype message provided The Associated Press and the world with the first account of Japan’s sneak attack on Pearl Harbor back in 1941.

Lytle was the news services Honolulu correspondent and a reserve Army officer. He was awakened by the Army on December 7th as Japanese planes bombed the U.S. fleet.  According to his son David,  Lytle quickly left for his A-P office at the Honolulu Star-Bulletin, where he filed a brief account of the attack in progress.  He then reported for military duty with the Army.

A few weeks ago on August 16th Hugh Lytle passed away.  He was 100 years old. (Published reports)

**

## HAM TRAVEL:  FREE ACCOMMODATIONS FOR HAMS ON THE GO

>From across the Atlantic comes word of an interesting program for hams who like to move around.  The International Travel Host Exchange, or I-T-H-E is a program administered by the German national society, D.A.R.C.  It provides radio amateurs with the possibility of free accommodation with other amateurs around the world in exchange for other hams offering accommodation to overseas amateurs.

Most International Travel Host Exchange members are in Europe, but there are also amateurs registered in Australia, Canada, India, Indonesia, Japan, Malaysia, New Zealand, Syria, Thailand and the USA. Once registered, postal or e-mail addresses are made available so that contact can be established well before any visit takes place. For more information please contact Thilo Kootz, DL9KCE by e-mail to dl9kce@darc.de.

**

SCIENCE AND TECHNOLOGY: NEW GRAYLINE STUDY REMAILER

A new Internet newsgroup has been set up to discuss and coordinate the current research into greyline propagation by the RSGB Propagation Studies Committee. It is with Yahoo and people can subscribe by sending an empty e-mail to greyline-subscribe@yahoogroups.co.uk

Yahoogroups is also the home of the Amateur Radio Newsline e-mail list you subscribe to it by sending a similar empty e-mail to arnewsline-subscribe@yahoogroups.com. ARNewsline is one word spelled a-r-n-e-w-s-l-i-n-e.

**

HAM RADIO IN SPACE: RS-12/13 - S.K.

The AMSAT News Service and the ARRL Letter both report that the Russian Radiosport RS-12/13 ham satellite appears to have died. Jerry Brown, K5OE, reports he's received word from Russian sources that RS-12/13 went dark as a result of severe solar flare activity in
July and August.

At airtime, efforts are under way to restore the satellite, but hopes for success are dim, according to Brown's Russian acquaintances. RS-12/13 were integrated into the COSMOS 2123 Russian navigation satellite, launched February 5, 1991. It’s beacons have not been heard since August 20. (ANS, ARRL Letter)

**

INTERNATIONAL - AUSTRALIA: CB RULES ARE CHANGING

The Australian UHF CB equipment standard is to change. The new standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users. Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. The A-C-A has also informed the Australian Association of Citizens Band Radio Operators that once the standards are approved by Standards Australia, they will become compulsory for equipment manufacturers. (Q-News)

**

DX

In D-X, word that KF2XN is active as KH2 slash KF2XN from Guam for at least the next month. He operates mostly SSB in his spare time. QSL as directed on the air. (RSGB)

And BI7DX is an Isands on the Air expedition that will operate from Weizhou Island throuhgh the 4th of October. Weizhou Island is located in the Gulf of Tongking in South China with team members comming from four different Chinese provences. The operation will be on SSB and CW from 40 to 10 meters, including the WARC bands. (RSGB)

**

THAT FINAL ITEM: THE BIRDS ARE BACK

And finally this week, our favorite flying T-Hunt is about to start. This, as the famed radio tagged burrowing owls take flight once again. With the details, here’s Joe Moell, K0OV.

--

It's that time again -- migratory birds in the Northern Hemisphere are heading south for the winter. For the fifth year, ham radio operators and scanner fans are being asked to use their equipment to help wildlife biologists figure out the routes and final destinations of endangered Burrowing Owls. In previous years, hams helped determine that owls hatching during summer months in the Canadian provinces of Saskatchewan and Alberta travel over central states from North Dakota to Oklahoma, ending up in southeast Texas and northern states of Mexico. They sometimes fly over 2000 miles to their winter homes.

There aren't any radio-tagged Canadian owls to listen for this fall, but the University of Arizona is asking for ham help with 53 transmittered owls from eastern Washington state. If you live in the western USA and can receive 150 MHz signals, you could help. Your scanner or extended-range hand-held ham radio transceiver, plus an outside antenna, are all you need to join in. If you have radio direction finding equipment for VHF, so much the better.

For all the frequencies and monitoring information, go to the usual place on the Web, www.homingin.com (HomingIn is one word.) If you aren't on the Web, send postal mail to my callbook address. Again, the Web site is homingin.com

Thanks in advance for your help. From southern California, this is Joe Moell K-zero-Oscar-Victor for Amateur Radio Newsline

--

Once again, more information is in cyberspace at www.homingin.com. (ARNewsline™)

**

NEWSCAST CLOSE

With thanks to Alan Labs, Amateur News Weekly, AMSAT, the ARRL, the CGC Communicator, CQ Magazine, the FCC, the Ohio Penn DX Bulletin, Radio Netherlands, Rain, the RSGB and Australia's Q-News, that's all from the Amateur

Radio Newsline(tm). Our e-mail address is newsline @arnewsline.org. More information is available at Amateur Radio Newsline's(tm) only official website located at www.arnewsline.org. You can also write to us or support us at Amateur Radio Newsline(tm), P.O. Box 660937, Arcadia, California 91066.

A reminder that our survey how ham radio is being used by home schoolers is still taking place. If you are a home schooling parent or a student being home schooled, please send your thoughts on the subject by e-mail to newsline@arnewsline.org. We will keep the survey going for one more week.

For now, with Bill Pasternak, WA6ITF, at the editors desk, I’m Jim Damron N8TMW and I’m Jeff Clark K8JAC saying 73 and we thank you for listening.

We have three "50Kw" stations in the Boston area - WEEI,  WRKO, and the one that
runs at 1510 (call letters change frequently) whose signals blanket Boston but
have
problems reaching some suburban areas.

WRKO, for instance, has a signal that really doesn't go far west.   But if you are
out in the ocean,  no problem.

Any audio editing software can be outfitted to work the same as any other. Pro Tools still works best on Mac with Digidesign interfaces. CEP works on just about any PC with just about any sound card. PT has tremndous snob appeal. CEP is innexpensive, which is important to consider if you are trying to get the GM to pay for it. PT beyond their Free program is still a little expensive, and you have to pop for some plug ins on top of that to get the same features as CEP.

Decide which one you like best, then spend the time learning all the tricks it can do. Personally I like CEP. So that's what I use.

Couldn't believe these DJ's aren't going to lose their job. This was perverse.

You may reach the DJ's here:
http://www.98kupd.com/contact.html

Here is the article from the St Louis Post dispatch:

Phoenix DJs harass Kile's widow and Benes

By Joe Strauss and
Rick Hummel
Of the Post-Dispatch
10/04/2002 05:42 AM

PHOENIX -- The Cardinals contacted Major League Baseball security Thursday morning after at least one player and the widow of pitcher Darryl Kile were harassed by a local radio station.

During its morning drive segment, FM station KUPD held an impromptu rally across the street from the team's north Phoenix hotel. Led by a pair of shock jocks, a group of people followed pitcher Andy Benes to a nearby coffee shop while chanting "Benes Sucks! Benes Sucks!" The rally continued while Benes and two friends remained inside the establishment. When the party emerged, a station employee put a cell phone to Benes' head in an attempt to get him to go on the air.

Benes suggested the station instead call Diamondbacks lefthander Randy Johnson, saying, "Why don't you wake up Randy and tell him he sucks? We beat him 12-2."

Hotel security tried to have the rally dispersed but were told by police the request had to come from an adjoining office complex being used as a staging ground.

While the rally continued, the radio personalities phoned the team hotel and were put through to the room of Flynn Kile and spoke to her on air. The interview ended when disc jockey Beau Duran asked Kile's widow if she needed a date to the game.

"People are entitled to do what they want to do but, in my opinion, this crossed the line," Benes said.

Benes and numerous players from both clubs were livid over the "prank" played on Flynn Kile.

"If you ask me, the guy who asked her that should lose his job," Cardinals reliever Dave Veres said.

"Whoever is responsible should suffer serious and dire consequences," said Cardinals manager Tony La Russa. "If we could get our hands on him ... I mean, that is so brutal, that something really significant should happen to him."

News of the phone call spread quickly through the team, which had enjoyed spending time with Flynn Kile since she and her three children had moved from St. Louis to suburban San Diego shortly after her husband's June 22 death. Kile's agent, Barry Axelrod, notified the club that Flynn was not prepared to grant interviews. However, the radio station's call went unchecked.

Chuck Artigue, a manager for the radio station, told the Arizona Republic that the prank "was in terribly bad taste" but that no action would be taken against the disc jockey, Duran.

Artigue said Duran told Flynn Kile in the broadcast phone call that "we saw you on TV the other night, and you're very attractive. You're hot. Are you going to the game today?"

Artigue said that Duran then asked, "Do you have a date?" After saying goodbye, Flynn Kile hung up.

Cardinals officials said they have left dealings with the radio station to the Diamondbacks, who insisted that they will continue to seek action.

Partial ownership of AM for sale. Idaho. Small market.
1 KW, fulltime AM. On the air since the 60s. $60,000

full price. NO real estate included. Only station in community.

Joint venture thru the "Radio Crazy". Active or inactive investors with at least $10,000 are welcome. All investors would be on the board with full voting right, if desired. No single investor can hold over 49 percent of the stock. That goes for the "Radio Crazy" too!

This is a nice area not too far from the famous ski resort town of Jackson Hole, Wyoming.

The station can apparently upgrade to 50,000 watts, non-directional days. Lower power at night, of course. Still, one hell of an improvement from the present 1 KW fulltime.

PLEASE! No "AM bashers" or negative nabobs, etc. I don't need the aggravation. If you hate AM, why annoy me or the forum!

(478) 741-1710 in Macon, GA.

73,

Meyer Gottesman aka Moron Gottesman aka W6GIV, aka "Radio Crazy". (Crazy as a Fox, that is!)

Oh, for you detractors, my last job in radio (2001) was "only" Chief Engineer for a New York City AM. I guess they paid me $75,000 a year to be an idiot!

MG

What's the problem?
I hear the lady is a real looker. Wouldn't any red-blooded hetero-man want
to "slip her the sausage?"
Let's face it, either she hasn't had any in quite a few months, or if she
has had some, & she's game!
No matter how you look at it, she's a single lady so it's worth a try.

Hell, life goes on so grab all you can!!

> Where do you live?  In my part of the country there are cochannel stations every 100-150 miles. In all directions.  300 miles is out of the question.

I have the best directional FM antenna RS ever offered. I bought for about $30 for it in 1981. At the time, I lived near North Creek, NY in the Adirondacks. I bought it to get a FM station in Glens Falls. At the time, there were a few FM stations that were attainable without a good outside unit. I did place a line amp on the unit and mounted it on rotor on a 20 foot tower.

I was very surprised the extra stations I could recieve. It was rated at 200 miles, direct line of sight. But, I was surrounded by mountains in all directions and was not up very high. I don't know of the distance, but it allowed me to get stations (regularly) in New Paltz, Albany, Cobleskill, Utica, Watertown, Platzburg, and Syracuse, NY as well as Montreal, QC Kington, ON, Hartford, CT, Keene, NH, and Montpelier, VT. I really do want to get it back up to see what I get here in the Mount Washington Valley of NH. The reception here is really quite varied, selective, and lousy.

Due to the perceived weakness of AM little research on frequencies is done.
I assume many times the station that was being protected went to FM years
ago and the old AM is silent. (or will be)  It happened to me I noticed that
a station we were protecting to the East had been off for years, my  upper
management were unwilling even to look at unless we could get some audience.
Meanwhile half the CMA was not getting us.  (didn't stay long)

Amateur Radio Newsline™ Report 1312 – October 4, 2002

Amateur Radio Newsline report number 1312 with a release date of Friday, October 4th, 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T. A new world-wide threat to ham radio on 70 centimeters tops this weeks Amateur Radio Newsline report number 1312 coming your way right now.

(Billboard Cart Here)

**

RADIO REGULATIONS:  A WORLDWIDE CHALLENGE TO 70 CM

If you operate on 70 centimeters anyplace in the world, listen up.  Your future access to that band is in peril.  Q-News Graham Kemp, VK4BB, has the details on how a proposed satellite system could run hams off of the band:

--
It has come to the attention of the South African Radio League, SARL  that the threat to the 70-cm band -- world wide --  is once again very real.   The SARL has just received a discussion paper which will be tabled at the World Radio Conference next year -- WRC-03 -- which directly  targets the portion of 432 to 438 MHz for exclusive use by the planned Earth Exploration Satellite Service or EESS,  due to be launched soon.

If this proposal is carried at the World Radio Conference next year it, will see this portion of spectrum allocated on a worldwide basis and this spells the death knell of all 70-cm ham radio operation.

The section of the proposal and the motivation is as follows:  Agenda Item 1.38: '...to consider provision of up to 6 MHz of frequency spectrum to the Earth exploration-satellite service active in the frequency band  420-470 MHz, in accordance with Resolution 727 that was revised at WRC-2000.
--

But why target the Amateur Radio allocation at 70 centimeters?  The researchers who want it say its the only frequency that will work.  Again, Q-News Graham Kemp, VK4BB:

--
According to the United Nations Conference on Environment and Development  -- UNCED --  held in Rio de Janeiro in 1992, there is an urgent need for assessment and  systematic observations of forest cover and rate of forest degradation in  tropical and temperate regions.  Active space borne sensors Synthetic Aperture Radars (SARs) are needed to enable the monitoring of forest biomass.

Systems operating on frequencies around 450 MHz can penetrate the canopy of forests, and have the capability to determine the ground-trunk interaction and are in the context of forest cover information of  particular importance.

Systems operating at 1.3 GHz, or higher frequencies cannot penetrate the canopy.  The spectrum around 450 MHz is also optimal for monitoring of continental ice and for monitoring of vegetation and soil surfaces for desert and  tropical areas.
--

More on this story in future Amateur Radio Newsline reports.  (Q-News, SARL, ARNewsline™)

**

HAM POLITICS:  HAM-CONGRESSMAN APPOINTED TO KEY HOUSE SUBCOMMITTEE

Back here in the U-S-A the ARRL Letter reports that Oregon Republican Congressman Greg Walden, WB7OCE, has been appointed to fill a vacancy on the House Subcommittee on Telecommunications and the Internet.  Walden is one of only two amateurs in the U-S House of Representatives, and his appointment to the key House panel dealing with communications matters is considered good news for the ham radio community.  Walden's selection was announced by Republican House Energy and Commerce Committee Chairman Billy Tauzin of Louisiana. (ARRL)

**

RADIO LAW:  CONGRESS MANDATES DIGITAL ANTI-PIRACY

Meantime, congressional lawmakers have ordered the Federal Communications Commission to mandate technology preventing digital TV signals from being hooked up to the Internet and made vulnerable to piracy.  The directive is viewed as a major victory for Hollywood film makers and other copyright owners at a time when the music business is being ravaged by Internet piracy. (Published news reports)

**

RADIO LAW:  FEDERAL COURT RULES IN RF BRAIN CANCER CASE

A Federal District Court has dismissed an RF related mobile telephone brain cancer suit.  According to the C-G-C Communicator, the court ruled that the plaintiffs had not provided any reliable and relevant scientific evidence to prove their case.  The complete finding can be found in cyberspace at http://www.mdd.uscourts.gov/Opinions152/Opinions/newman0902.pdf  (CGC Communicator)

**

Break 1

>From the United States of America, We are the Amateur Radio Newsline, heard on bulletin stations around the world including the KA5GLX repeater serving Clear Lake Texas.

(5 sec pause here)

**

RESCUE RADIO:  HAM RADIO READY FOR HURRICANE LILI

Following quickly in the wake of Hurricane Isidore, a Category 2 storm named Lili made its way across western Cuba and then took aim at the U-S Gulf Coast shoreline.  Amateur Radio Newsline’s Don Wilbanks, KC5MFA, has more from New

Orleans:
--

According to an ARRL Bulletin, the Hurricane Watch Net and W4EHW at the National Hurricane Center in Miami are again gathering ground-level reports using ham radio for communications into and out of the affected areas.

The Hurricane Watch Net is currently activated on 14.325 MHz with traffic coming in from numerous stations. Meantime W4EHW continues to exchange meteorological data and Spanish advisories with Cuban amateurs. Many of the reports received via ham radio have proven to be valuable to forecasters at the National Hurricane Center.

Right now all eyes are on Lili as she makes her way toward the U-S mainland. On Wednesday October 2nd the FCC declared a communications emergency as Lili approached the Louisiana and Texas shoreline. As we go to air, all hams not directly involved in hurricane related emergency communications are required to avoid using 7.285 MHz daytime and 3.873 MHz from sundown to sun up. These frequencies are protected plus or minus 3 kHz. The FCC declaration will remain in effect until rescinded and could be in effect for as long as two weeks.

Monitoring the storm and ham radio traffic from one of Lili’s probable targets near New Orleans, I’m Don Wilbanks, KC5MFA, reporting.
--

Official advisories on Lili and other tropical storms can be found at the National Hurricane Web site. Its in cyberspace at www.nhc.noaa.gov. Late breaking ham radio operational advisories are at www.arrl.org. (ARRL, others)

**

## SPACE AND SCIENCE: HURRICANE LILI CAUSES SHUTTLE LAUNCH DELAY

And a potential threat from Hurricane Lili to the Mission Control Center at Johnson Space Center in Houston has forced a delay in the launch of the STS-112 shuttle mission. Atlantis and its six member crew are now slated to lift off no earlier than 1800 to 2200 GMT on Monday October 7th. Once on-orbit, Atlantis will deliver the S-1 Truss to the International Space Station. The crew will perform three spacewalks at the station and will transfer supplies and equipment between the two vehicles. (NASA)

**

## RESCUE RADIO: VK HAMS THERE AS PHONES GO OUT

Amateur Radio has come to the rescue after the town of Bindoon in Western Australia was isolated by communications failure.

For reasons yet to be explained, the failure of the phone system on Sunday September 22nd was total. Both mobile and fixed services went dead. No calls were possible.

A ham radio knight in shining armor in the form of VK6HGM rode to the rescue. Actually he drove to a hilltop and used the Roleystone repeater on 146.700 MHz in the hills above the city of Perth to report the telephone outage. This of itself is quite a feat, as both Bindoon and Roleystone are in the Darling Mountain Range and are out of line-of-sight from one another.

Be that as it may, the call for assistance was answered by VK6AX. He had telephone service and used it to alert the authorities and brought about a happy end to the story. Within half an hour, all telephone services in Bindoon were back on line.

**

ENFORCEMENT: NET UNDER FCC SCRUTINY

Turning to news from the FCC, word that the agency is taking a close look at a 20 meter net and its control operator. The FCC's Daryl Duckworth, NN0W, explains:

--
"The Enforcement Bureau has opened an inquirey into the Mobile Emergency and County Hunters Net operating on 14.336 Mhz. We have requested that James Grandinetti, who uses the call signs KZ2P and K2JG to respond to seven complaints about the operation of the net. The Enforcement Bureau also requested documentation supporting the club call sign of K2JG which is assigned to the Atlantic Amateur Association."
--

The FCC's letter to Grandinetti alleges that he harassed certain operators and banned other hams from using 14.336 MHz while he was operating as a net control station. The letter told Grandinetti that the frequency 14.336 MHz is a shared amateur frequency. As such, the operation of a net on that frequency conveys no greater rights regarding its use by Grandinetti than any other licensed radio amateur. Grandinetti was given the customary 30 days to reply.

**

ENFORCEMENT: PRIVILEGES REINSTATED

And still in the enforcement arena, some good news for a Martinsville Virginia ham. Again, the FCC's Daryl Duckworth, N-N-Zero-W:
--
"We notified Theodore Crutchfield, K4TFC, that since he has taken and passed an Element 1 code test as requested, his license remains Extra class and that he is in good standing."
--

By way of background, back on December 20, 2001, the FCC had notified Crutchfield that it was requiring him to re-take Amateur Element 1 under the supervision of the W4VEC Volunteer Examination Coordinator. This, on or before February 15th of this year. Crutchfield appeared for the exam session but did not pass. As a result, he was notified on July 16th that the Wireless Telecommunications Bureau would downgrade his license from Extra to Technician

Class. A few days later on July 21st, Crutchfield successfully completed an Element I examination in Roanoke, Virginia. Now, as Daryl Duckworth put it, Crutchfield remains Extra Class and his license is in good standing with the FCC.

**

RADIO ACCIDENTS: HAM INJURED IN TOWER ACCIDENT

A Michigan ham has been seriously hurt in a tower fall. According to an Internet report from Allen Stap, N8OKU , the accident involved the removal of a 160 foot tower.

Stap says that the top 120 feet was removed without incident. Daylight ran out so removal of the remaining 40 feet was deferred to the following morning. On inspection, the last 40 feet appeared to be safe and the removal work began. But the base of the tower broke apart and the tower fell with the ham on board. It landed on a polebarn with the ham crushed between the tower and the roof.

The accident happened near the town of Lawton. The ham involved was not identified by full name or call sign but was described as a long time and experienced tower climber. His injuries included a broken jaw, two broken arms and a broken leg. The good news is that he is expected to make a full recovery after extensive rehabilitation.

**

RADIO ACCIDENTS: NEBRASKA TOWER COLLAPSE KILLS TWO

And a 1,965-foot television tower collapsed Tuesday September 24th in a western Nebraska field. Two workers were killed and three others were injured.

The tower was located near the town of Hemingford. A spokesman for its owner, Duhamel Broadcasting Enterprises of Rapid City, South Dakota, said two of the workers were repairing the roof of the near-by transmission building. The others were strengthening the tower so it could be equipped with high-definition television antennas.

The structure was built in the late 1960’s and was used to transmit the signal for Scottsbluff television station KDUH throughout most of the states panhandle area. It and was the tallest structure in Nebraska, and was some 500 feet taller than the Sears Tower in Chicago and 700 feet higher than the Empire State Building in New York. The cause of its collapse is not yet known. (K0NEB)

**

OPERATING EVENTS: ARRL DEVELOPING JOTA DATABASE

Jean Wolfgang, WB3IOS, of the ARRL Field and Educational Services Department writes to say that the League has set up a first ever scouting Jamboree On The Air event database. It comes as the result of requests to Jean from scouting groups looking for hams who plan to offer their services to the event. You can register your JOTA event by taking your browser to the rather complex U-R-L you will find on the web at http://www.arrl.org/FandES/ead/jota.html.  T his years Jamboree On The Air takes place October 19th and 20th, local time.  (ARRL)

**

OPERATING EVENTS:  SHIPS ON THE AIR

The USS Cassin Young, a museum ship in Boston on a turn around cruise will operate an Amateur Radio station from her radio room during the voyage on Saturday, October 12th.  Operators will pass commemorative US Naval style messages between that ship and the USS Salem.  The Salem is another museum ship berthed in Quincy Massachusetts.  Operation will be on 20 and 40 meters.  For a commemorative certificate send an SASE and a copy of the message you hear  to Bob Callahan, W1QWT, 56 Acorn Street, Scituate, Massachusetts 02166.  And less we forget, of the two ships involved the USS Cassin Young is a Destroyer and the USS Salem is a heavy cruiser.  (W1QWT)

**

WITH THE HAHDI-HAMS:  FCC TVI BOOK NOW AVAILABLE

Handi Ham members listen up.  The FCC's TVI book has been added as a zipped file in the downloads section of the Handi-Ham members only website.  Handi Ham members can also contact headquarters for a free floppy disk version of the book.  More information is at www.handiham.org.  (Handi Hams)

**

EMERGING TECHNOLOGY: THE SCIENCE REPORT

Two interesting items from this weeks science page.  Here are Jim Damron, N8TMW and Jeff Clark, K8JAC.

--
EMERGING TECHNOLOGY:  TECHNO-JUNK PILING UP

A new study called Waste in the Wireless World: The Challenge of Cell Phones says that 130 million wireless devices will be discarded annually in the United States.  This equals 65,000 tons of two-way radio garbage.

The study makes several recommendations regarding both the design of cell phones and the disposal of them.  It says that the use of toxic substances in them be reduced. It also suggests that device standardization be implemented so users are not forced to purchase new phones when they change service providers or for travel. Finally, the study says that cellular telephones should be designed for disassembly, reuse and recycling.

It should be noted that the study was limited to cellular phones and other two way radio devices. It does not include the tons of VCR’s and TV sets that are disposed of each year. (Supplied by several ARNewsline(tm) listeners)

**

EMERGING TECHNOLOGY: BARCODES CAN SAVE LIVES

You know those bar codes that grocery workers scan to let you know how much your cereal costs? Well, hospitals are now using the same technology to help save lives, thanks to a computerized medication system. A nurse scans the bar code on a patient's I-D bracelet, along with a bar code found on the medication itself before administering the drug. This enables the computer to verifies and checks the bar codes to make sure the patient is getting the correct medication. A green signal tells the nurse it's okay to precede. An error warning, and red signal, alerts the nurse if something's not right.

To date, only about two percent of the nation's medical facilities use bar code technology to verify medication administration, but that number is expected to rise. Statistics show the system prevents anywhere from 84 to 264 potential errors a week at one hospital alone. (Science Today)

SPACE AND SCIENCE: JAPAN DELAY COMPLETION OF ISS MODULE

Completion of the international space station hit another snag. This as Japan's cash-strapped space program announces that it would delay launch of the bus-sized research module it is building for the project.

The research capsule called Kibo is the only part of the space station developed and run by an Asian country. It was scheduled for launch sometime in 2004. Liftoff of that module is now planned for April 2005 at the earliest. (Published reports)

**

INTERNATIONAL - GERMANY: DDH47 CELEBRATES 50 YEARS OF SERVICE

November 8th and 9th will see a special station on the air from Pinneberg Germany. This as Weather Service's station DDH47 will be operating crossband on 147 kHz and listening on 80, 40 and 20 meters CW to celebrate its 50th anniversary of the service. Slow speed Morse transmissions to North America are also planned. (G4NJH)

**

INTERNATIONAL: FIRST UK TO VE CONTACT

Sunday, September 22nd marked the 84th anniversary of the first radio message from the United Kingdom being received in Australia. On the 22nd of September 1918, a message of goodwill was sent in Morse code from the Marconi station located near Caernarfon. The callsign was M-U-U, and the 200-kilowatt transmitter was on 21 kHz, a wavelength of 14,300 meters. The signal was received at Wahroonga near Sydney by Sir Ernest Fisk, an Englishman who had served under Marconi in England. The message of goodwill was published the following day on the front pages of the Australian morning newspapers. (GB2RS)

**

DX

In DX, word of the first 6 Meter contact from Afghanistan. Nick Peckett, G4KUX, writes that he made what he says is the first-ever contact on 6 metes from Kabul at 15:15 UTC on Tuesday the 24th of September. Peckett, operating as YA4F, contacted YF1OO in Indonesia. G4KUX says that he hopes to be able to give many others their first opportunity to contact Afghanistan on 6 meters over the next few weeks. (GB2RS)

And lower in frequency, TM4ENN is a special event station in France to commemorate the 60th anniversary of the creation of the 'Normandy Niemen' air flotilla by General de Gaulle. It will be active on 40, 20, 15 and 10 meters internationally. QSL direct with an stamped and self addressed envelope to F6BZH, or via the bureau. (GB2RS)

**

THAT FINAL ITEM: BY-BY BETAMAX

And finally this week, a legend is being put to rest. After twenty-seven years in production Sony Corporation says that it will finally put its famed Betamax tape format to bed forever. Our producer Bill Pasternak, WA6ITF, takes a nostalgic look back:

--

Its said that Betamax opened the world of home video as the first practical consumer format. Sony, J-V-C and Panasonic first tried with the famed 3/4 inch U-Matic machines, but consumers were reluctant to buy a videotape machine that was bigger than most T-V sets of that era and looked more at home in a television station than their livingroom.

My own first home VCR was a Sony SL-7200 Betamax. It would record a whole hour of pretty high quality video and audio on a tape cassette that was only 3 1/2 by 6 inches in size. I paid almost $2000 for the machine and each cassette cost me close to $25. That was in the late 1970’s and despite loosing the 1980’s video format war to VHS, Betamax held on as a niche product all these years.

Now, according to Larry Bloomfield’s Tech Notes news service, Betamax for consumer use is being phased out. This is because of the new consumer digital tape formats like Mini D V that are literally delivering a death blow to Betamax’ future prospects.

Sony reportedly will manufacture only 2,000 more Betamax machines before discontinuing the product altogether. But Beta will live on in the world of television journalism. Thats where a spinoff tape format called Betacam with suffixes like S-X and S-P became the defacto news gathering videotape of choice and have remained so for the past decade and a half.

With an SL 7200 Betamax still sitting someplace out in the garage -- gathering dust -- I’m Bill Pasternak, WA6ITF, for the Amateur Radio Newsline.
--

And you thought that the Betamax died a quiet death many years ago!
(Tech-Notes, ARNewsline™)

You must be a real hit at a singles bar. Has it yet occurred to you that she might have loved her husband and isn't ready to replace him? When you finally grow up you'll realize that a relationship is much more than the use of one's personal meat products. The "red-blooded hetero-men" I know have more feelings for someone so badly hurt by the loss of a partner that they'd try to do more to help than hurt her even more.

Either you're too young to know the real value of your private parts or your head hurts and has been damaged from being slapped in the face so often. You remind me of the woman's travelling companion in the Expedia TV ad.

I'd say you're an insensitive boor, but I'd probably just be repeating what you're used to hearing.

Rich

But she's still a recent widow, moron!  Maybe if you have someone you love die unexpectedly, you'd understand.

BTW, the station has put up an apology at their web site--www.98kupd.com (click on "Our Misjudgment").  Take it for what it's worth (and for once you can't blame CC or Infinity--locally owned [?] Sandusky owns the station).

My apologies for the use of "moron"--I just couldn't believe this post got by Steve.

[ Moderator's note: It didn't. I read it, and made a conscious decision to post it. I think it was the right thing to do... now Blahblah can read all of the followups to its idiotic reply to the original post and maybe gain a clue. Not that I have much hope of Blahblah gaining a clue... but... you never know. ]

I remember living in Spokane in 1977 listening to 97-KREM FM playing
music in mono instead of stereo. Don't know why but they did.

Hi,

If you have any airchecks from the Tri-cities, Washington, from the 60s and 70s, please email me. I'd love to know what you have. Any stations and formats would be fine:  KALE, KORD, KOTY, KONA, KIOK, etc.

If you've got 'em, drop me a line.

Tom Lacko, tomlacko@yahoo.com

I heard on the news this morning that the Opie and Anthony rule extends to Arizona.  That much bad PR means the jock gets fired, which he did.  The unfortunate element is that somone somewhere will hire him for more than what he was making because he "generates word of mouth".

Hello,
i' have made some update on "The Italian HF Archive", the website  dedicated
to the italian HF/LW/MW stations with
a lot of photos and infos. Here is the url:

http://www.mediasuk.org/archive

Inside "HF Archive" you can find info about:

Broadcasting site

Rai - Shortwave Center Prato Smeraldo - Roma
AWR - Shortwave Center Forl�
Rai - Long Wave and SW Center - Caltanissetta
Rai - Medium Wave Center - Santa Palomba
Rai - Medium Wave Center - Capo Vaticano
Rai - Medium Wave portable trasmitter
Rai - Medium Wave Center - Sanremo with CFA antenna
Rai - Medium Wave Center Genova Granarolo

Utiliy Station

Coast Station IAR Roma Radio
ICI - IRM Station Coast Guard Roma
Coast Station IPP Palermo Radio
CIRM - Radio Medical Service Station IRM
NDB Beacon Campagnano
NDB Beacon Albenga
NDB Beacon Santa Maria di Leuca
NDB Beacon Capo Vaticano
SalCost - Salini Costruttori
IGN - Protezione Civile Roma

http://www.mediasuk.org/archive

It's for kids, not the family. Radio has a targeted, demographic specific model, not a family model.

[Please forgive the commercial aspect of this post, but we need to find someone before the 1st of the year.]

The Radio Guide (formerly Radio Shopper) publication is looking for an experienced individual, to become our exclusive display ad salesperson.

This person must have an extensive background in radio broadcast equipment and technology. We would prefer a person with prior experience in radio engineering and radio equipment sales.

This person must also have display advertising sales experience, and must be able to come "on line" immediately. We are planning extensive changes to the publication, and we need someone who will become an integral part in the planning and execution of those changes.

If any of you know of someone who may be interested in this position, please have them contact us.

Please call me directly at 928-284-3700 (no e-mails please)

Thanks --> Ray Topp [publisher]

John Ziegler, a wannabe talker who proudly measures his past job
tenure in months - sometimes weeks - has somehow landed a job.  WHAS
in Louisville is his latest victim.  He's been there a couple of weeks
now so he's about due for a mental breakdown and hasty exit but only
after burning that bridge to the ground as is his M.O.  This is the
guy who was fired for calling blacks "niggers" on the air and then
insiting the word is proper.

But that isn't what happened. We are talking about a specific event. You are trying to compare sex between two consenting adults in an inappropriate place with rape.  Sorry, no comparison.

I have never suggested otherwise. However, they do not have the right to expect that their demands for draconian punishment for anyone and everyone involved directly or indirectly in the tweaking of their sensibilities be met.

Give us a break!!! Sex in a foyer of a Cathedral compares in no way with the burning of crosses by groups like the KKK. To even suggest such a thing really destroys your credibility.

Read a recent history book. See what burning crosses represent. See how many innocent people were killed and mutilated simply because of the color of their skin. See the vicious hate such a thing symbolizes. Then compare it to two jerks having sex in a tourist trap. If you still find the two events comparable, I feel very sorry for you.

If I had any respect for you left before this post it's gone, now. I rarely get offended in newsgroups but the suggestion that I would minimize or justify the actions of those who burn crosses and murder people is deeply insulting and so far off the mark that I won't pursue further response on the matter from such a horse's behind as you.

>But before you say that about the entire medium, ask yourself if the
>genocide in Rwanda would have taken place without a radio station
>exhorting the populace to do it.  Ask yourself why it is that the Arab
>states are filled with people who seriously think the destruction of

>Qaida.  And ask yourself why so many in the former Yugoslavia think
>that Milosovic is a martyr for the cause of his country.

Radio in the US and radio in other countries is very different. In the US we use radio for entertainment and, to a lesser extent, information during emergencies. When Michael Savage says we should "nuke em and ask questions later" we don't follow his suggestion. We listen to him, make a mental comment on how stupid the remark is and go on to our next appointment. It's schtick. Entertainment. When George Bush, SR. appears on Rush Limbaugh (his only guest up to that time) and still gets his butt whooped it should tell us something about how seriously listeners take radio programming. It's entertainment. It's not going to move large segments of the US population into action unless there's money hidden in a book in a library. Then they'll trash the library looking for it.

I gave an interview to Reuters on 9/11/2001. I was an eyewitness to the World Trade Center attack. Saw it all from the street. I mentioned that "Angry White Male" radio was likely to soften a bit in favor of a more tolerant lifestyle approach as people reevaluated the important things in their lives. Sean Hannity, with his brilliant, razor sharp mind (dulled by not changing the blade very often), read it as me likening Talk Show Hosts to the Taliban and dared me to call his show to defend myself. It was schtick. Nothing more. He was a bit presumptuous in assuming I was listening (I wasn't. I find him among the dullest of talk show hosts). If he had really wanted a serious interview there are enough people at WABC who have my phone number that he could easily have called to book me for an interview. I would have been happy to do it. That would have destroyed the schtick-iness of the bit. It's entertainment. Often mean spirited, but entertainment, none the less.

Countries like the ones you mention use radio for very different reasons. It's often a lifeline for them. I suggest you analyze the power of radio in the context in which it's used.

In the US we use it as entertainment and, in serious emergencies, we use the local "crisis station" for information to help us keep up with what could be lifesaving information. To think that it would be powerful enough to foment a revolution is naivete of the highest order.

Rich

Amateur Radio Newsline™ Report 1308 – September 6th, 2002

Amateur Radio Newsline report number 1307 with a release date of Friday, September 6th 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.  222 to 225 MHz comes under attack once again, N Sync’s Bass may not fly to the I-S-S after all and an Ohio city regulates 11 meter C-B.  Find out the details exclusively on Amateur Radio Newsline report number 1308 coming your way right now.

(Billboard Cart Here)

**

THE WAR TO SAVE OUR BANDS:  A NEW ATTACK ON 222 - 225 MHZ

Some are calling it Deja Vous.  This as big business once again sets its eyes on grabbing a ham band and converting it into a money making machine.  And once again its the old 220 MHz band. David Black, KB4KCH,  is here with the details:

--

Once again, amateur radio frequencies may be under siege.  Large corporations wanting to become even bigger want hams off the 222 to 225 MHz band, so they can make money.  This time, the challenge comes from Data Commlink Incorporated and its twenty electrical cooperatives.  Data Commlink filed comments in W T Docket 02-224.

That's an FCC proposal that began innocently enough.  The proposal sought to gather comments on requests for waivers to provide band management services in the 220 to 222 MHz band.  That's the piece of spectrum that used to belong to Amateur Radio but which hams say was stolen by greedy businesses over a decade ago.

But page 10 of DataComlink's filing holds comments that strike straight at amateur radio.  The company says quote--the spectrum at 222 to 225 MHz that is currently held by the Amateur Radio Service is being underutilized.  In the early days of 220 MHz commercial regulations, amateur Service licensees argued that their spectrum was necessary and important in order to provide communications in the event of disaster or emergency.  Although we take no issue with this claim, we do not feel that the 222 to 225 MHz band has been utilized as well as Amateur Radio claimed it would by so-called no-code hams in their efforts to keep a foothold in the 220 MHz arena.

The filing then presents a direct challenge to ham radio.  Without citing any evidence, Data Comlink asserts that in nearly all densely populated areas, the 222 to 225 MHz band is largely quiet.  The company claims that only what it terms as handful of individuals in the Amateur Radio Service even use the spectrum.  Data Comlink then says hundreds of thousands of potential commercial users wait with no alternatives.

Data Comlink tells the FCC that--with considerable commercial interest already in the 222 to 225 MHz band because of waiver requests--it feels that the frequencies amateur radio holds would be much better utilized for commercial use.  The company says existing users of the spectrum -- ham radio operators -- are so few in number that the economic impact on those affected would be minimal.

As for where the thousands of US hams who actually do use 220 to 225 would wind up, Data Comlink says nothing.  Another issue is left unaddressed.  If the FCC were to actually give the Data Comlink proposal any serious consideration, who would reimburse repeater owners the hundreds of thousands of dollars invested in their systems?  DataComlink is silent on that one.

For the Amateur Radio Newsline, I’m David Black, KB4KCH.
--

What credence will the FCC give the Data Comlink idea?  That’s hard to say. Since it comes in the context of comments on another matter the Commission could simply rule that anything dealing with 222 to 225 MHz is not germane to the issue.  On the other hand, the FCC could use the Data Comlink commentary as the basis for a Notice of Inquiry aimed at reallocating the 222 to 225 MHz band to commercial use.  Which way they will go will not be known for a few months at the latest.  In the meantime ham radio had better keep a close eye on the situation so that nothing is covertly slipped by.

The complete Data Comlink filing is on the web at http://gullfoss2.fcc.gov/prod/ecfs/retrieve.cgi?native_or_pdf=pdf&id_document=6513289200  (From comments filed to FCC by Data Comlink)

**

RADIO RULES:  BAND SHARING REQUEST FOR 70 CM

The ARRL news reports that an amateur from Virginia has petitioned the FCC to allocate eight channels in the 70-cm band for use by visitors from Europe and the United Kingdom with Personal Mobile Radio transceivers.  The recently authorized PMR 446 is similar to the US Family Radio Service.  Dr. Michael Trahos, KB4PGC, a physician from Alexandria, filed the petition last January, saying it would help to promote international goodwill. The FCC has designated the petition as RM-10521.  (ARRL)

**

ENFORCEMENT:  HAM CHARGED WITH MISDEMEANOR IN ILLINOIS TRAGEDY

An Inverness Illinois man who authorities say misused a police radio channel has been ordered to turn over all the radio gear that he owns to local authorities.  Bruce Tennant, K6PZW, has more:

--
According to a report in the Chicago Tribune Cook County Judge Joseph Urso has ordered that William Bily turn over all his transmitting equipment to Barrington-Inverness police.  This, as a condition of his release on bond while awaiting trial on misdemeanor charges.

Bily appeared August 30th in the Rolling Meadows branch of Cook County Circuit Court in connection with misdemeanor charges of resisting a peace officer and interfering with emergency communications.  A longtime amateur radio enthusiast, Bily is said to have disrupted police communications Sunday August 25th by transmitting over the Barrington-Inverness police radio channel.  When Officer Steven Graham came to his home, Bily allegedly resisted arrest. Authorities say that a struggle ensued and that during their tussle Officer Graham who was only 53 suffered a fatal heart attack.

Asserting the heart attack resulted from the scuffle, the Cook County medical examiner's office ruled Graham's death to a homicide. But Assistant State's Attorney Steven Rosenblum said that his office does not intend to seek more serious charges against Bily.

Bily's attorney, Frank Cece, asked that his client only be forced to hand over radio gear that could be used to transmit on the police radio band. He maintained that Bily, a Marine veteran who saw combat during the Vietnam War, has much equipment that poses no risk to police radio frequencies.

But States Attorney Rosenblum countered that this is not the first occasion police had visited Bily's house. The first time was on July 4th of 2000, also for allegedly interrupting the police frequency.

For the Amateur Radio Newsline, I’m Bruce Tennant, K6PZW, reporting.
--

As part of the bond agreement Judge Urso also ordered that Bily not possess any firearms and that he not contact the family of the deceased officer. A trial is set to take place on October 2nd in the Rolling Meadows courthouse.
(Adapted from information supplied by KC9RP, W9FS and others)

**

ENFORCEMENT: “RABBIT EARS” THE HAM JAMMER GETS JAIL

A CB operator from Florida with an apparent hatred of hams will spend the next year in a federal prison. Amateur Radio Newsline’s Bill Burnett, KT4SB, reports from Miami.

--
He called himself Rabbit Ears on the C-B two-way. He also harassed ham radio communications on several bands. And now, Jupiter Florida Citizens Band operator William Flippo will spend a total of 15 months in federal prison. He will also pay a $25,000 fine for jamming Amateur Radio communications and transmitting without a license.

According to the ARRL Letter, Federal District Court Judge Daniel Hurley imposed the sentence August 29th. This, following a guilty verdict on June 19th on four counts of operating a radio transmitter without a license and another four counts of deliberate and malicious interference.

According to trial testimony, Flippo primarily had targeted members of the Jupiter-Tequesta Repeater Group for jamming and regularly interfered with amateur operations, especially on 10 and 2 meters, over an approximately three-year period. He has been in custody since the guilty verdict and underwent a psychiatric evaluation prior to sentencing.

At the sentencing, Flippo reportedly wept. He said that he had turned over a new leaf and claimed he was sole support for his wife and two daughters. But Judge Hurley was not impressed. He told the 60 year old Flippo that he was old enough to have considered the consequences of his actions. Hurley also alleged numerous incidents of perjury in the course of Flippo's testimony during his six-and-one-half day trial.

Judge Hurley also told Flippo that wants a full financial disclosure from him. And when he does get out of jail, Flippo will spend another year on supervised probation during which he cannot own radio gear or firearms.  In other words, for the next two years the law will be watching this C-B’er like a hawk.

In Miami, I’m Bill Burnett, KT4SB, reporting for the Amateur Radio Newsline.
--

Judge Hurley ordered Flippo to immediately start serving his sentence.  The former C-B operator was reportedly led into and out of the courtroom in shackles and leg irons.  (ARRL, others)

RESCUE RADIO:  HAMS, CB’ERS, GMRS AID AFTER TORNADO

Hams, C-B’s, and just about anyone with a radio system not dependent on phone lines is pitching in to provide emergency communications in Ladysmith Wisconsin.  This follows a devastating tornado on Monday, September 2nd that destroyed a major part of the town and completely knocked out the areas communications infrastructure.  Twenty people were injured.

As we go to air, there is still no wireline telephone service and cellular service is spotty at best.  The personal communications teams are reportedly augmenting local law enforcement and fire services in relief efforts. Wisconsin Governor Scott McCallum declared the Ladysmith a disaster area.  (Published news reports, on-air reports)

HAM RADIO IN SPACE:  RUSSIA TELLS BASS HES OUT OF ISS TRIP

A Russian space official said on Tuesday September 3rd that N Sync singer Lance Bass has been asked to leave Russia's cosmonaut training program and will not be the world's third space tourist.  Sergei Gorbunov, a spokesman for the Russian Space Agency, said the decision to end negotiations with Bass was made in connection with what was termed as violations of his contract to fly on a supply mission to the orbiting outpost.

Bass began training in July at Star City, and just returned to Russia on Sunday after spending a week at NASA's Johnson Space Center in Houston with the other two crew members. There, Bass was trained in use of several station systems including the ARISS ham radio station. Now, Gorbunov said Bass, who had hoped to fly to the Space Station aboard a Russian Soyuz rocket on October 28th, would be leaving and would not be permitted to return.

Gorbunov said that in place of Bass, the Russians would likely send up a cargo container with extra equipment needed on the International Space Station. Gorbunov said the container has already been prepared and is ready to go.

But Bass’s representatives have a different story. They say that that its all a misunderstanding and that the 23 year old singer should be back in training shortly. If he does make it to orbit, Bass will become the youngest person to ever fly in space. (Published news reports)

RADIO LAW: LANCASTER OHIO HAS NEW CB CONTROL LAW

Lancaster Ohio now has a new City Ordinance to put teeth into local enforcement of the FCC’s Part 95 CB radio rules. The measure was passed on August 26th and is the handi-work of Lancaster City Law Director David Trimmer and a local area radio amateur named John Hilliard, W8OF. The two put the legislation together over the last several months and sent it twice to the FCC office in Farmington Hills, Michigan for review and comments.

Under the law, CB radio users who operate on what’s termed as an unlawful frequency or using excessively powerful equipment could be cited for a misdemeanor, with a maximum penalty of 180 days in jail and a $1,000 fine. Ham radio operators are exempted because the city says that they are trained, licensed, are regulated differently under federal law.

City officials estimate there are at least 250 people operating 11 meter Class D CB radios in Lancaster and not all follow FCC rules. The city's law will give prosecutors a tool to fight these abuses. The FCC believes that Lancaster is the first municipality to enact such a far-reaching ordinance to regulate CB radio within the city limits. (ARNewsline™ from information supplied by W8OF)

**

ENFORCEMENT: YUCAIPA CALIFORNIA TEST SESSION INVESTIGATION CONTINUES

The FCC audit of a W5YI-VEC Amateur Radio test session in California is continuing. The ARRL Letter reports that so far, the probe into a September 1, 2001, examination session in the city of Yucaipa has led to the suspension of seven volunteer examiners and the cancellation of five Amateur Radio licenses.

The W5YI-VEC's Larry Pollock, NB5X, said possible irregularities surfaced earlier this year in the form of an e-mail and a telephone call concerning two candidates at VE sessions in Yucaipa. Pollock said that one of the reports was that a license had been purchased in California. The other was that the individual in question could not copy code, and that if he had passed the exam, he had done so fraudulently.

After considerable investigation on his own, Pollock said he saw enough questionable data that he felt retesting was in order.  That's the remedy he proposed to FCC Special Counsel for Enforcement Riley Hollingsworth, K4ZDH. That was the action taken and also the action which lead to the five cancellations. The FCC's Hollingsworth said the agency would continue to investigate other examinations administered by the VEs involved in the September 1, 2001, session in Yucaipa.  (ARRL)

**

ENFORCEMENT:  MAN MADE QRM ON 20 METERS

The Maritime nets on 14.315 MHz are reporting problems with interference. VK2UW says that the interference appears to be man made and regularly appears as both noises and CW type transmissions.  The Australian Communications Agency has been notified and is monitoring.  (Q-News)

**

HAMFESTS:  TRW SWAP MEET FOR SEPTEMBER CANCELED

A reminder.  If you are planning to travel to Los Angeles this September to attend the famed TRW Swap Meet, choose some other month.  This is because the giant swap-feast has been canceled because  a corporate event will be held at the Space Park Facility on Saturday, September 28th.

Only this month, September, is canceled.  There will be a TRW Swap Meet the last Saturday of the month in October, November and December. For more information visit http://w6trw.com on the world wide web.  (TRW ARC)

**

CONVENTIONS & HAMFESTS:  BOXBORO MASS GROWS

Attendance at this years Boxboro Massachusetts Hamfest seemed to be back to its normal level of about 3,000.  This continues an upward spiral first noted a few weeks ago at the Huntsville Hamfest in Alabama.

According to observers, the exhibit hall was busy all day Saturday and there seemed to be an increased number of big-ticket sales.  This again mirrors what happened at the shows in Huntsville and to a lesser degree in Escondido California that same weekend.

The biggest draw in the forums area was once again Bob Heil, K9EID, and his audio clinic road show.  Bob had about 100 people in the room, many of whom left the session and immediately hit the dealers to buy the appropriate peripheral gear.

Boxboro is one a dwindling number of hamfests and conventions that still has an annual banquet.  This years speaker was ARRL President Jim Haynie, W5JBP.  Also on the program was live music from a four piece band.

How good was this years Boxboro Hamfest? Vertex-Standard’s Chip Margelli, K7JA sums it up this way. He says that he couldn't leave the booth or take a break until 4:15 Saturday afternoon. And that kind of says it all. (K7JA, others)

BREAK 2

This is ham radio news for today’s radio amateur. From the United States of America, We are the Amateur Radio Newsline with links to the world from our only official website at www.arnewsline.org.

**

INTERNATIONAL - SOUTH AFRICA: HAMS CONTINUE TO ASSIST AT WORLD SUMMINT

Ham radio is continuing its support effort at the U-N Sponsored World Summit on Sustainable Development. With the latest, to Johannesburg and Hans van der Gronnendal, ZS6AKV:

--

AUDIO REPORT ONLY: You can hear it at http://www.arnewsline.org

--

More on ham radio at this important world summit next week.

**

INTERNATIONAL – SOUTH AFRICA : JOHNNY NEETHLING, ZS1GB – S.K.

Still from South Africa comes the sad news that Johnny Neethling, ZS1GB, passed away on Friday 19 July. Neethling as 80 and was licensed just after World War 2. ZS1GB was well known in Radio and TV circles. He was also involved in maintaining equipment in the first the first heart transplant operation to take place in South Africa. (RSGB)

**

INTERNATIONAL - GIBRALTER: WILFRED GUERRERO, ZB2IB – S.K.

Q-News reports the unexpected death of well known Gibraltar radio amateur Wilfred Guerrero, ZB2IB. Guerrero was 55 years of age and for many years was the mainstay of amateur radio in Gibraltar. Most recently he pioneered, virtually single-handedly, the introduction of the Foundation License in that nation. (Q-News)

**

INTERNATIONAL - AUSTRALIA: VK UHF CB TECH STANDARDS CHANGE

The technical standards for C-B gear used in Australia are changing. Q-News Graham Kemp, V-K-4-B-B, reports from down-under:

--

APCNews says the VK UHF CB equipment standard is to change. The standard will require that CTCSS equipment include facilities to reduce interference to non CTCSS users. Required features include a 'channel busy' warning light and a 'listen before transmit' function. The changes were required by the Australian Communications Authority following changes that legalized CTCSS signaling on UHF CB channels. From Q-News Australia, I’m Graham Kemp, VK4BB.

--

The change affects only the Australian U-H-F Citizens Radio Service. No other bands are affected. (APC News, Q-News)

**

INTERNATIONAL – SCANDINAVIA: NEW MAJOR HAMFEST IN EU

A major new European amateur radio event will take place in Gothenburg Sweden for the first time in April next year. The Scandinavian HamVention 2003 will be a big hamfest where Scandinavian and other European radio amateurs can get together. There will be a large exhibition with amateur radio dealers from all over Europe and it is planned to offer Scandinavia's biggest flea-market yet, allowing radio amateurs to trade, buy and sell everything to do with our hobby. A traditional Scandinavian amateur radio dinner will be held and there will also be a special ladies' program. The Swedish national amateur radio organization, the SSA, will hold its annual meeting at the same time. Further details are on the Scandinavian HamVention website http://www.scandiham.com/. (GB2RS)

**

DX

In D-X, the Canadian licensing authority, Industry Canada, has authorized the use of special prefixes to celebrate the 125th anniversary of Japanese immigration to Canada. The special prefixes will be on the air from the 1st of September until the 31st of October.

And this for those listening across the Atlantic a lot higher in frequency. Word from the Radio Society of Great Britain that the G-B-3-N-W-K microwave beacons located in North West Kent are currently non-operational. The beacons, which usually transmit on 1296.81 and 2320.85MHz are off the air until further notice due to site problems.

**

THAT FINAL ITEM:  911 REMEMBERED

And finally this week, we pause to remember the tragedy of Tuesday September 11th 2001.  Here’s Amateur Radio Newsline producer Bill Pasternak, WA6ITF.

--
I’m going to tile this as an editorial.  Ill also promise to keep it short.

We have all heard these words before.  “September 11th, 2001 is a day that changed all of our lives forever.”

The pictures are still there in our minds eye.  The giant Boeing jets crashing into the World Trade Center.  The buildings crumbling to the ground.  The fire at the Pentagon.  The scorched earth in Pennsylvania.

And the other scenes.  The ones only known to ham radio.  Those of the radio amateurs from New York, Washington and  Pennsylvania who sprang immediately into action.  The hams from across America who dropped everything, grabbed their H-T and traveled sometimes thousands of miles -- paying their own way -- to become the second, third and forth wave of relief operators and volunteers.

No, ham radio was not on the front page of newspapers.  Hams were not the lead story on the evening news.  The tragedy of 911 was the story.  The job of ham radio was to be the carrier of the message so that aid and comfort could be brought to the victims of this horrific and cowardly act of terrorism.

What 911 showed is that our loose knit fraternity can come together when the need arises.  That we maybe called radio amateurs, but that we are communications professionals.  That ham radio is there when it is needed.

On 911, ham radio did the job its people have trained themselves to do.  The hobby has since moved on.  So has our nation.  But neither will ever be the same.

I’m Bill Pasternak, WA6ITF
--

We pray that a tragedy like 911 never happens again.

**

```

The trouble with cross burning is it isn't funny or clever. Available options are stupid or intimidating, but not funny or clever.

I don't know that it's offensive unless you think you can get something for being offended, which is sort of the attitude of the blue-noses in the case at hand, a cheap righteousness.

What is offensive, and this is actual morality, such as rarely comes up without the rags of moralism all over it, is treating adults as children; in this case treating Blacks as if they had to be protected from stunts. Everybody can see it for what it is, stupid. For some reason the idea that Blacks don't need leaders and don't need to be offended cannot make any headway in the popular story line. That's truly offensive, and the correct response is some kind of protest, be it a joke or some other thought to try to turn that rhetoric.

So in short, taking offense at cross burning is not so simple either.

Greaseman ran into that and everybody caved. The correct response would have been a better line back at him.

Even Greaseman caved, by the way.

>Rich Wood posted:
> I don't recall anyone suggesting the act was sacriligious. Even the Caltholic League. I would bet. Christ, himself wouldn't have been offended and probably would have used his "he who is without sin cast the first stone" approach to this whole affair. Perhaps his concern would be that the couple was unmarried.

I don't think your knowledge of the Bible is as extensive as your knowledge of radio, Rich.
I am not a Biblical scholar, but it doesn't take a scholar to know your application of John 9:7 is faulty.
Jesus made that famous quote when he was facing a group of self-righteous scribes who were wanting to stone a woman for committing adultery.  There is absolutely no way you can stretch that to mean that Christ wouldn't have been offended by sex in the church.

If you are really wondering what Jesus may have done if he found this couple gettin'-it-on in the church, I would suggest you try reading Mark 11:15.
This tells of when Jesus returned to Jerusalem and found that people had set-up tables in the temple, and were buying, selling and trading their wares.
He storms into the temple and overturns the tables and runs the money-changers off.  He said "you have turned this house of prayer into a den of thieves" (paraphrasing).  I think this would more accurately indicate what Jesus would do if he found this couple boinking in the church.
He might stand up for the couple if they were forced to appear in front of an aggressive tribunal, and chastise those calling for this couple's heads on a platter, but he would most certainly have been PO'd at them for fornicating in a holy place.

I could really care less about O&A's antics... And I believe that many are grossly over-reacting to this incident, but you have spent years on this forum calling people to task for factual errors and improper application of facts,  so I just couldn't let this one stand without 'setting you straight.

By the way, I read that in recent years, "Judge not, lest ye be judged", has replaced John 3:16 as the most quoted verse in the Bible.
I don't know what this means except perhaps that people are trying to imply that Jesus was just a good-ole-boy who preached 'live and let live'.
Such is certainly not the case.

FOR IMMEDIATE RELEASE - RESTRICTED LPFM MAJOR CHANGE WINDOW ANNOUNCED

The FCC has announced in a public notice that a restricted filing window will be opened for major changes between October 28 and November 1, 2002. Applications affected in this window are those that were filed prior to the Radio Broadcast Protection Act, a rider to a bill passed by Congress that would direct the FCC to impose third-adjacent channel restrictions on LPFM stations. This includes some LPFM stations in California.

The applications named in the public notice can file major amendments to change their station location and/or change frequency to resolve the third adjacent channel restrictions. In addition, applications mentioned in "Appendix A" and "Appendix B" in the second LPFM R&O will also be eligible for filing window.

To assist applicants, the FCC will modify their Channel Finder program to exclude these applications in order to assist these applicants find another channel. REC plans to include a "switch" to allow for the exclusion of these station records in our LPFM Channel Search Tool. This switch will be in place prior to the opening of the window.

REC has information specific to Southern California LPFM applications including alternate channel selections on some stations at:
http://www.recnet.com/lpfminfo/1002window.pdf

For information on Low Power FM (LPFM) Radio visit:

Hi,I am Journalism student at the University of Western Sydney, Australia. I am researching radio's position in the future. I was wondering if anyone in this group might be able to help me out. Some questions I have:

Will radio be able to sustain itself in the digital world?

Will it prove stronger or weaker compered to other mediums like
television and newspapers?

WHO, 50KW clear channel station in Des Moines will be operating from a short stick for the next 6-8 weeks as technicians analyze and repair the famed WHO modified Franklin antenna.

The WHO modified Franklin is one of a kind and is the electrically tallest AM antenna in the country.  It is 780 ft high.

WHO is owned and operated by Clear Channel Communications.

We plan to have pictures of the repair operation on DesMoinesBroadcasting.com.

Ray in Des Moines

I think you generalize and oversimplify. As Rich said, radio in the US is primarily an entertainment medium. In other countries, it may be a vehicle of change, or a stooge for the government du jour.

> And I doubt they understand the role of radio and television in places
> such as Rwanda, Yugoslavia, or the Arab states.

I get the impression that you do not have much of an understanding of radio's role in this "kind" of country, either. Just so that I am not myself shooting form the hip, I ask, "have you ever worked in a radio station in a developing nation?" Unfortunately, I think I know the answer already.

In the Arab nations, with a rare exception or two, broadcasting is operated by the state for the preservation of the state and the Islamic faith. There is no room for dissent, for different points of view. For a while, Lebanon had a nice start on private and independent broadcasting, but that nation jumped into the proverbial handbasket headed for hell a few decades ago.

Similarly, Rwanda has a nice state broadcast monopoly, run by and for the government of the nation. There is no Kinyarwanda-speaking Rush Limbaugh or Ralph NAder taking to the airwaves to exhort the people to democratic action.

If I could figure out what Yugoslavia is, I could comment on that place, also. Bosnia has some independent stations, but their lifespan is best measured in moth-years. And most are busy playing Britney and Eminem.

You see, except for the very few high power stations that can penetrate borders, generally on short-wave, the local broadcasters in a nation tend to reflect the style of government there. If there is relative freedom as we know it, such as in France or Spain or Italy, stations tend to be very much like ours. They are entertainment vehicles. They play songs, and the talk shows debate infidelity and the peccadilloes of politicians.

When governments are totalitarian, there is no liberty at all. There are also no private stations, unless they are owned by cronies of the local dictator or despot. There is no "role" of these stations except to preserve the totalitarian status quo.

There is a grey area in the nations that are limited democracies. Since I know many of these well, I can comment on the "roll" of radio. That role is to make money and keep pretty quiet in 99% of the cases. Occasionally, an idiot will come into a station and decide that he/she/it can change things by creating a "voice of the opposition."

Now that's an interesting role, isn't it. Very noble, very altruistic. Also, very stupid.

The following is a true story. Individual built a group of stations from scratch in an unstable "western democracy." In the first 8 years, he saw the government change 5 times, only twice through elections. He was used to seeing armed soldiers in his studios when the government changed or when there was a risk of "news getting out of control." He had a station taken over on one occasion by leftist Shining Path guerillas. Failing to learn from these examples, during the fifth such government, a military junta, he associated with opposition politicians to build a large news and talk station where the news was not conveniently doctored. This station had a significant role in mind, that of bringing about change in the government's actions and promoting free elections. Big role. Nice role. Jelly roll. Horsepucky.

The Generals did not see the role the same way, and they stuck a nice rifle in the face of the owner and said, "you will leave the country or we will shoot you." He left. He lost a total of 12 commercial radio licenses, most in cities of over a million population. So much for the role of radio in that kind of country.

Now, what exactly is the role of radio in "those" countries? The one none of us understand but which you apparently do?

Sincerely,
The guy who had the rifle in his face.

In article <alkmvt$n09$1@xuxa.iecc.com>, p_spelling@yahoo.com says...

> Will radio be able to sustain itself in the digital world?

In the near future (20-years) I don't see radio going away. I've heard that listenership levels are down from 25-30 years ago (can't cite a report but that's the general feel I get from reading this NG) but are still healthy enough to attract advertisers. Unless Satellite radio really takes off, radio will remain the primary source of information for people in cars. Of course many, like me, listen to the radio for a traffic report, weather report, and the news headlines before putting in a tape or CD.

> Will it prove stronger or weaker compered to other mediums like
> television and newspapers?

Television will always beat radio in terms of number of people listening/viewing. But, local and even network television is losing ground to the myriad of other entertainment and information sources available on cable TV and satellite. As far as newspapers, hundreds of U.S. newspapers have folded up or combined with other newspapers over the past 15 years. Newspapers, like radio, are a dyeing medium.

As far as radio journalism goes...

I don't know about Australia, but journalism on radio in the U.S. is nearly dead.

25-30 years ago when I started in radio almost every station had some sort of news department, even if it was just one person who did everything.

During the early to mid 80's, when many new "drop in" FM stations were established, competition for advertising dollars became tougher and news departments were dropped like hot potatoes.

From the mid-80's on, as ownership limits were "relaxed" (to put it mildly) many stations in the same market were of common ownership. Those that decided to maintain a news presence had one news department to cover all their stations. And that news department was barely staffed.

I've been out of radio for about 7-years now so I'm not sure about other markets, but this is how it is in Houston (one of the 10 biggest markets in the country). Most stations here either don't do news or have a morning show co-host choosing some items from the newspaper to read. News after 9:00am is almost nonexistent.

There is one reliable news/talk station (KTRH.) Its reporters and announcers also do news cutins on 2 other "Clear Channel owned" AM stations -- I'm not sure about the FM's. But if KTRH is carrying a ball game it's difficult, if not impossible, to get reliable information on any station in the market.

KILT-FM has a news department (I think they're owned by Infinity?) but it's very small -- the two anchors have been around forever and there is rarely any sort of live spot news coverage.

Some stations get minimal news coverage by using Metro Traffic's news source. I'm not sure how this source works now, but in the beginning their local coverage consisted of a couple of anchors making beat calls along with poor quality stories posted from Metro offices across the country. Reporting was done by roving traffic reporters who happened upon a crime scene.

There are some glowing exceptions, but in many small markets, it's tough to find a live and/or local voice outside of morning drive.

Unless one gets lucky, one can expect to earn just a little over minimum wage for a radio journalism job in the U.S. ... that is if there is a radio journalism opening to be found!

The suggestion has been made that WNEW-FM lose its license. It's worth
about $200 million. That seems a little excessive for the offense,
since, as you say, the courts would give the copulators a small fine.
I doubt there would be any jail time for such a thing, especially
since it was a first "offense."

I thought it was the other way around, too much water softens the
"antenna" making it prone to fall over?  Well actually it's the ground the
water softens, but it's the antenna that falls over.

As I recall, that woman was Mary Magdalen. I have some nuns I need to
yell at for teaching me that if it wasn't true.

Didn't you read my message? I recall mentioning His anger at the money
changers in the temple.

>He might stand up for the couple if they were forced to appear in front of
>an aggressive tribunal, and chastise those calling for this couple's heads

And He most certainly have forgiven them for doing it. Since the Bible
is interpreted in hundreds of different ways, we'll never really know
for sure what Christ would have done.

My guess is that he's already PO'd at the church for allowing their
priests to boink young children. I'm prepared to believe there's a
much hotter place in Hell for the priests than for the Copulators in
the Cathedral.

I appreciate your concern. I'll pursue the matter with friends who are
"experts" on biblical matters, though I don't believe they'll be able
to read Christ's mind and better than the rest of us.

Rich

I don't recall that Jesus ever expressed offense over matters sexual. The sexual prudishness has been a subsequent glue-on, sort of a pick-and-choose carry-over from the Old Testament.

> If you are really wondering what Jesus may have done if he found this couple
> gettin'-it-on in the church, I would suggest you try reading Mark 11:15.

Jesus was short with the sins of greed and selfishness. Perhaps you can quote a passage where he condemned sexual improprieties.

> I could really care less about O&A's antics... And I believe that many are

Actually, yau have failed to demonstrate from the Bible just how Jesus would react to this very matter.

> By the way, I read that in recent years, "Judge not, lest ye be judged",
> has replaced John 3:16 as the most quoted verse in the Bible.
> I don't know what this means except perhaps that people are trying to imply

> Such is certainly not the case.

Unfortunately, most of what people in many churches believe would be condemned by Jesus is not supported in scripture. Leaking back to the

Old Testament is not compelling evidence.

The WHO modified Franklin is one of a kind and is the electrically tallest AM antenna in the country.  It is 780 ft high.
>>

But, it's not really a Franklin.

It's only 300 degrees tall, and the two true Franklins at KFBK and the single true Franklin at KSTP are both 360 electrical degrees tall.

WHO's stick is indeed special, and it is indeed one-of-a-kind.

It is an "antifading" stick, but its horizontal field, while very good, cannot approach the 510 mV/m/kW at 1 km of a true Franklin.

Not withstranding that, I wish Clear Channel every success in resurrecting WHO's legendary stick.

FWIW, WAOI had a true Franklin, but as it wasn't 360 degrees tall (I think it was only about 240 degrees tall) the FCC classified it as a conventional sectional.

Only about 420 mV/m/kW at 1 km from WOAI's Franklin

And, its replacement, a conventional stick of about 195 degrees, can do nearly that ... a little over 400 mV/m/kW at 1 km.

I wasn't referring to that. I was addressing the calls to "take away"
the station license, or imposition of a "20 million-dollar fine". Those
are the draconian punishments which I was addressing.

What exactly is the definition of a "Franklin" antenna?  There seems to be
a wide variety of opinion as to what a "Franklin" antenna actually is.

Regards,

John Byrns

Gentlemen, the argument before you was one where you seem to feel that the first amendment freedom of press is the over-riding factor here. Those who know what I post, know that I don't often disagree with that. However, in this case we have freedom of press versus freedom of religion, standards of privacy, and civility.

I tend to agree that in 20/20 hindsight, O&A didn't do much harm. However, if I had presented something like this to you *before* it actually went down, you'd have been hard pressed to predict whether it was a reasonable thing to say.

What if it wasn't a Catholic Cathedral that couple chose, but a Synagogue or a Mosque? Would you have had the same reaction? I have to wonder.

You argue that radio is not taken seriously, so this is all pointless. Clearly, someone took the radio seriously enough to get arrested having sex in a church. You argue AFTER the fact that no harm was done. I say the incident was reckless because O&A knew they were treading on thin ice and that they were merely doing this for entertainment value. That's not much of an excuse.

If instead, O&A had approved somebody dancing nude on the front steps of an orthodox synagogue, I think they'd have seen a legal hell come raining down on them. I don't think they'd have much help from the ACLU on this one, either.

I don't think this is about free speech, gentlemen. This is about the freedom of practicing one's religion privately without harassment. Freedom of Religion is also part of the Bill of Rights. We're not talking about moralizers who tell others how to live. We're talking about groups who assemble for private religious services. Encouraging the debasement of a religion practiced in that manner without a serious critical purpose embedded somehow (even humorously) would be fighting words. That's not protected speech, and I'm surprised you think otherwise.

I disagree with Ron that tweaking religious authorities is a good thing to do on general principle. It's one thing to do it to someone who maintains a public persona and who evangelizes their ideas outside their church. That's fair. However doing it to a religion operating in a private manner is a different issue. Then you're dealing with an intrusion.

In that light, it is OK for the likes of NAMBLA to make a speech on the radio to voice their manifesto. It's not okay to approve of a specific indecent act for no other reason than to "tweak a church." I cite this because although both may cause civil unrest, one could argue a much stronger case for airing the former than the latter.

That's my opinion.  Clearly you each have yours.

Rich, I've been civil to you.  I've argued with substance and care. The techniques I used are quite legitimate.  I've merely taken your arguments to their absurd extremes to challenge your thinking and to learn from your answers.  If that's what it takes to get on your kill file then you have much thinner skin than I would have thought for someone in your profession.  In response, you resorted to name calling, and immature behavior.  I hope you have better judgment on radio than you have shown here.

I'll leave my argument there.  I doubt that I have changed your minds nor have you changed mine; but I do believe we have all thought carefully about our values, how they apply to this incident, and at least made some effort to communicate.  I think we're all better off for it.  Even you, Rich.

Peace.

That has never been my argument. I have simply addressed the issue of scope in enforcing the law against those involved in the stunt.

> Those who know what I post, know that I don't often disagree with
> that.  However, in this case we have freedom of press versus freedom
> of religion, standards of privacy, and civility.

These are murky areas and not well-defined in terms of enforcement. I know of no laws covering civility. The matter of privacy is most unclear. Surprising as it may seem, there is no Constitutional provision that guarantees that anyone may do anything with regard to religion, only that the government may not be the entity that restricts such practice.

> I tend to agree that in 20/20 hindsight, O&A didn't do much harm.
> However, if I had presented something like this to you *before* it

Again, where WOULD be the harm?

> If instead, O&A had approved somebody dancing nude on the front steps
> of an orthodox synagogue, I think they'd have seen a legal hell come
> raining down on them.  I don't think they'd have much help from the
> ACLU on this one, either.

Why? What, other than indecent exposure and possible trespass would be involved? That is hardly "legal hell".

> I don't think this is about free speech, gentlemen. This is about the freedom of practicing one's religion privately without harassment. Freedom of Religion is also part of the Bill of Rights.

"Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof..." That's it. Nothing about protection from harassment by others. Nothing about being guaranteed "privacy".

> We're not talking about moralizers who tell others how to live.

Why not? As far as they are concerned, they are practicing their religion when they do this. Are they not entitled to do so "without harassment"? Why the distinction?

> We're talking about groups who assemble for private religious services. Encouraging the debasement of a religion practiced in that manner without a serious critical purpose embedded somehow (even humorously) would be fighting words. That's not protected speech, and I'm surprised you think otherwise.

I don't know where you get this. Other than being a violation of decorum, taste, and dignity, I don't see why you feel that O&A's stunt transgressed some sort of legal sanctum sanctorum.

> I disagree with Ron that tweaking religious authorities is a good thing to do on general principle. It's one thing to do it to someone who maintains a public persona and who evangelizes their ideas outside their church. That's fair. However doing it to a religion operating in a private manner is a different issue. Then you're dealing with an intrusion.

If St. Patrick's Cathedral is such a "private place", why was the door not locked? It is my understanding that the doors of Catholic churches are never locked. If they want so much privacy, perhaps that practice should be reviewed.

> That's my opinion. Clearly you each have yours.

Yes, that is true. I have simply asked some questions your opinion raised for me.

> I'll leave my argument there.

Could you at least answer my questions about this nebulous set of unwritten law by which you expect others to abide? It would really help me, and maybe others, to understand your your argument.

Wasn't that something involving kites and keys?

```

Hi,

I am new to the radio broadcast arena would like to air our show on an FM station in the San Francisco Bay Area. This is a pre-recorded show and I would like to purchase air time to broadcast this on a daily basis. Any help in leads to securing air time would be highly appreciated. I would also appreciate information on the price ranges of air time (low to high).

Thanks!
Manu

On 10 Sep 2002 20:58:35 GMT, Jake Brodsky <frussle@erols.com> wrote:

>What if it wasn't a Catholic Cathedral that couple chose, but a
>Synagogue or a Mosque?  Would you have had the same reaction?  I have
>to wonder.

I believe the reaction would have been the same. It just happens that the most visible church in New York is the Cathedral, primarily because of its size, location and political involvement in the operation of the city. Under other Cardinals it has brought attention to itself by attempting to influence lawmaking in the city.

>You argue that radio is not taken seriously, so this is all pointless.
>Clearly, someone took the radio seriously enough to get arrested
>having sex in a church.

I think our concept of "seriously" is very different. Three people participated in a contest that offended many but harmed no one. If radio had the power you feel it has the Cathedral would have looked like a nudist colony with a full blown orgy in progress.

>If instead, O&A had approved somebody dancing nude on the front steps
>of an orthodox synagogue, I think they'd have seen a legal hell come
>raining down on them.

If your point is that Catholics get a raw deal I think you're off base. There have actually been nude people in front of and inside the Cathedral. They were arrested and carted away. The exact same thing that would have happened in a synagogue or mosque. The Catholic church isn't being singled out, except for the recent rash of child molestors protected by those in charge. That's what's causing the attention and the response that the church is hypocritical in what it chooses to find offensive.

If it makes you feel any better there have been Rabbis over the years who have done similar things. In fact one has just been convicted of killing his wife. Another was hauled off a plane for fondling a woman during a flight. Nobody's perfect.

>I don't think this is about free speech, gentlemen.  This is about the
>freedom of practicing one's religion privately without harassment.
>Freedom of Religion is also part of the Bill of Rights.

If you want to practice your religion privately, don't do it in one of the city's biggest tourist traps. I would find it very difficult to worship privately in the Cathedral, except during a Mass. At other times I'd be distracted by all the tourists.

Freedom of Religion doesn't mean you're guaranteed a place to worship where there won't be naked people breaking your train of thought. Freedom of Religion means the government won't stop you from worshiping or sponsor your particular type of worship. There are , actually, nudist churches that would find it offensive if textile wearers invaded their space.

>We're not talking about moralizers who tell others how to live.  We're talking
>about groups who assemble for private religious services.  Encouraging
>the debasement of a religion practiced in that manner without a
>serious critical purpose embedded somehow (even humorously) would be
>fighting words.  That's not protected speech, and I'm surprised you
>think otherwise.

The nature of a church is that it's not private. It's public worship. Private worship is when you do it alone. A kid's prayers before bed are private.

In fact, we are talking about moralizers who tell others how to live. The Cathedral's management actively engaged in abortion issues on a governmental level and did the same in the case of gay rights issues. It has long been the target of protests of all kinds. Hardly private.

>In that light, it is OK for the likes of NAMBLA to make a speech on
>the radio to voice their manifesto.  It's not okay to approve of a
>specific indecent act for no other reason than to "tweak a church."  I
>cite this because although both may cause civil unrest, one could
>argue a much stronger case for airing the former than the latter.

What "civil unrest" has this event caused? Even NAMBLA hasn't caused "civil unrest." It's caused lots of fear and disgust but no "civil unrest." I know many people within the church who feel it needs a major tweaking on religious issues, let alone the current oproar over child molestation. In parochial school I had to study church history. There have been many times in the history of the church that required major tweaking. I was taught that kind of tweaking made the church stronger by getting rid of bad Popes, gobs of greed and the killing of people in religious wars.

>Rich, I've been civil to you.  I've argued with substance and care.
>The techniques I used are quite legitimate.  I've merely taken your
>arguments to their absurd extremes to challenge your thinking and to
>learn from your answers.

Until you accused me of supporting the activities of the KKK, that was true. You took my arguments far beyond the absurd well into deep insult.

> If that's what it takes to get on your kill
>file then you have much thinner skin than I would have thought for
>someone in your profession.  In response, you resorted to name
>calling, and immature behavior.  I hope you have better judgment on
>radio than you have shown here.

You're not in my kill file. You're also not in my respect file. I think calling you a horse's behind was entirely appropriate. You didn't like it, so it became immature. It's a hackneyed debating technique. Before your comment about the KKK I would have expected better from you.

I'll put my broadcast judgement up against anyone's and come out smelling like a rose. I doubt there's anyone who can argue that point and win.

There's a vast difference between what my personal opinions may be and what I'll allow on any radio station I'm responsible for. I don't program for me. I program for my listeners. I program with respect for my listeners. If Opie and Anthony worked for me I would have had security usher them out of the building within minutes. My issue is with the knee-jerk reactions to the event and the suggestion that it harmed people more than the actions of pedophile priests and their protectors. The kids were the ones really hurt, not the easily offended bluenoses looking for publicity.

Rich

>>
What exactly is the definition of a "Franklin" antenna?  There seems to be a wide variety of opinion as to what a "Franklin" antenna actually is.
>>

Base insulated,

Sectionalized,

Bottom section and Top section of equal height,

Fed at the sectionalizing insulator through an adjustable matching network,

Bottom of bottom section connected to the ground plane through an adjustable capacitor.

Of the sticks meeting these chaacteristics, the only ones I am aware of are:

1) KFBK's two sticks, used in DA-2 configuration,

2) KSTP's single stick, used in ND-D configuration, and

3) WOAI's old stick, used in ND-U configuration.

The Commission didn't consider WOAI's old stick to be a Franklin as the two sections were not both 180 degrees.

The Commission doesn't consider KSTP's day stick to be a Franklin as the two sections are not both 180 degrees, they are a fraction above 179 degrees, but below 180 degrees, however.  The performance is, however, consistent with that of a Franklin: 510 mV/m/kW at 1 km.

The Commission considers both of KFPK's sticks to be Franklins as the two sections are both 180 degrees. The performance is consistent with that of a Franklin: about 510 mV/m/kW at 1 km (at least for the DA-D operation).

Peter.

John,

You seem to know that sex in a public place,  and defiling a church is not a crime in the State of New York.   Some authorities, including the NYPD, felt otherwise.

I propose you offer your legal services to WNEW(FM) in the ongoing FCC inquiry.    Or the three that were arrested in the stunt.

They need good lawyers and good arguments.

I'm not Catholic but I found the crime offensive enough for the FCC to take action.

Yes, IMHO if it happened in a synagogue or mosque (wasn't there a similar DJ stunt in Denver where the DJs ran through a mosque with a drum and bugle, around two-three years ago???)  I would be offended no less.

You can argue that this Catholic church's behavior is hypocritical and I would even find grounds to agree with you. However, they don't deserve to have others encourage depraved behavior toward them. Nobody's house of worship deserves such pointless insults, particularly because it can be so inflammatory.

>Freedom of Religion doesn't mean you're guaranteed a place to worship where there won't be naked people breaking your train of thought. Freedom of Religion means the government won't stop you from worshiping or sponsor your particular type of worship. There are , actually, nudist churches that would find it offensive if textile wearers invaded their space.

Freedom of Religion means the freedom to conduct religious services on private property. The size of the church, the attractiveness of the church, or the scandals going on around that church are not the issue here. What is at stake is not just the depraved act of a couple of stupid people. We're talking about encouraging this act against the church for no other reason than to be offensive for the purpose of "entertainment".

And I want to put another point in this argument to rest: It's not about the nudity. Many churches have nude cherubs painted on their ceilings. It's called art. The issue here is the act of depravity toward a church and the rantings of someone with a very widely monitored forum encouraging such behavior.

>The nature of a church is that it's not private. It's public worship. Private worship is when you do it alone. A kid's prayers before bed are private.
>
>In fact, we are talking about moralizers who tell others how to live. The Cathedral's management actively engaged in abortion issues on a governmental level and did the same in the case of gay rights issues. It has long been the target of protests of all kinds. Hardly private.

...Yet no cause for wanton disrespect or the active encouragement of such for entertainment purposes.

>What "civil unrest" has this event caused? Even NAMBLA hasn't caused "civil unrest." It's caused lots of fear and disgust but no "civil unrest." I know many people within the church who feel it needs a major tweaking on religious issues, let alone the current oproar over child molestation. In parochial school I had to study church history. There have been many times in the history of the church that required major tweaking. I was taught that kind of tweaking made the church stronger by getting rid of bad Popes, gobs of greed and the killing of people in religious wars.

Rich, don't mistake people's tolerance for disrespectful behavior as meaning such things are OK.  If one offends another in the name of free speech, at least let there be a purpose.  If you wish to argue that it needs no purpose beyond entertainment, don't be surprised when some Shock Radio producer gets sued for damages, pain, and suffering --and loses.

However, I agree this is a matter of opinion.

>>Rich, I've been civil to you.  I've argued with substance and care.

Until you stopped reading what I wrote carefully enough to realize that's not the case, I had much more respect for you too.  Why do you hold others to higher standards than you practice?  Let's drop this secondary behavior issue and simply agree to converse in a more civil and careful manner.

>I'll put my broadcast judgement up against anyone's and come out
>smelling like a rose. I doubt there's anyone who can argue that point
>and win.

Even those who make deodorants and perfume can lay a fart.  On the whole I tend to respect your experience and judgment.  I wouldn't have made the effort to engage you in this discussion if I didn't.  That's doesn't mean I'm going to agree with you or that I won't question your conclusions.

After all, that's free speech.

Is/was not KELO 1320 in Sioux Falls a Franklin? They used to run ads in
Broadcasting to that end (1960 era).

>U.S. newspapers have folded up or combined with other newspapers over
>the past 15 years.  Newspapers, like radio, are a dyeing medium.

As a newspaper writer until a few weeks ago, I can attest to the death of newspapers. Small-town newspapers, such as the one I worked at, will be the first to go because they can not afford to keep up technologically. My paper still used Apples made in the late 80's-early 90's. No digital cameras. No "pagination" program (the ability to print out the entire page on one giant sheet of paper instead of printing each story individually and laying it out --- "cut and paste" --- which would have saved me a couple of hours each day).

These newspapers can't generate the dollars needed to upgrade. They will either have to take on debt to upgrade or they will continue to use obsolete equipment and sink to the depths. My lack of experience with current technology has been a hinderance in finding another journalism job. I guess owners think I'm too stupid to learn the new ways quickly (what is it they think I would *like* to do --- keep working with hammers and chisels on stone tablets?

Small papers also can't attract good writers because they can't afford to pay them. I've been monitoring my replacement's stories. It's not that he's not a good sports writer --- he's not a good writer, period. I've never seen so many incomplete sentences in a newspaper anywhere.

Me, I'd love to work in radio. It was my dream job in high school. But my first job was a nightmare because it was at a station in a chain run by an egomanic who's good friend was GM. Since then, I've found that the journalism jobs are in small markets that are community minded (Nevada, MO, has about a dozen newscasts a day). In bigger markets, news isn't as important unless it's at an AM talk station. And in that case, that station will probably use the bird to fill time with Dr. Laura and Rush.

So where do I go in today's market? I don't know. It appears I am obsolete. And I was so the moment I graduated from college in 1994. One of my best friends in college went to a small station and won a state award for news reporting. He's now a DJ on an FM station because the news department was axed and he wanted to stay in the market (family concerns).

So who needs a sports/news guy? Plenty of people, I guess, as long as there are small-town stations that broadcast the local high school's football games. But you're probably also going to need to work another job.

Funny, I went to college to learn a skill that would allow me to work in an industry I fell in love with when I was 12 and live somewhat comfortably. I didn't want fame and riches, I just wanted to do what I wanted to do. But now, I'm a part of a group of workers that are considered to be "a dime a dozen", sitting in front of my computer on a Wednesday morning wondering what the hell I'm going to do.

I couldn't even get a job at the local station here. The owner has a great arrangement: his DJs read the news and he has a math teacher and an anesthesiologist working the ball games for $25 bucks a night (the games have 65 sponsors). Why does he need me for $16K a year, no matter how good I am?

S.E.N.
Depressed.

I guess I've decided it's time to chime in on this whole little fiasco.

My thoughts:

** Freedom of speech exists. "Congress shall make no law," etc. But what people frequently forget is that Constitutional rights have limits. The classic example cited by lots of people is yelling "Fire!" in a crowded theater, which is not allowed.

** The issue: you are guaranteed the rights contained within the Constitution, AS LONG AS you aren't infringing on someone else's rights.

** The question: Who was harmed here? Whose rights were violated?

Interesting.  I tried to listen on the internet and the popup window says "Playing" but there's no audio.  Perhaps my problem is the Rush Blackout?  I have a friend that works at WHIO TV in Dayton -- he probably would have told me if there were problems. In fact, up until a few months ago the WHIO-am antenna farm was in his backyard!

I'll ask and see if there are any problems.

I never said any such thing. Now you tell me: what are the penalties
under the law? For "accomplices"? Now, compare your answer to the calls
for "stripping WNEW of its license" and "fining the station twenty
million dollars". See any discrepancy?

> They need good lawyers and good arguments.

I couldn't agree more.

They're back as of I guess Tuesday afternoon, but I'd be curious
what was the deal on Monday and Tuesday morning.

Actually they go off the air a good deal, and I regard it as
sort of a charm of rural life.

Is/was not KELO 1320 in Sioux Falls a Franklin? They used to run ads in Broadcasting to that end (1960 era).
>>

Perhaps at one time, but since 1998 they're been using four 106 degree towers, nights (one tower, days).

WKY has previously been stated to be employing a Franklin, but a check of the license data shows that the purported Franklin is an ordinary sectional, with a 145.30 degree bottom section with 15.66 degrees of top loading for a total bottom section electrical height of 160.96 degrees, and an overall electrical height (both sections) of 323.70 degrees.

Now, that certainly meets one of the several assumptions of a Franklin, namely two (nearly) identical sections.

However, WKY's efficiency of 476.37 mV/m/kW at 1 km would indicate that it is not a Franklin, nor does its Sect code, which is 2.

A Franklin's Sect code is 3, and a Franklin's efficiency is about 510 mV/m/kW at 1 km.

How can you have something "mV/m/kW" ?

Would not mV/m scale as the square root of kW?

Paul Van House <pvanhouse@houston.rr.com> wrote in message news:<all3hf$m54$1@xuxa.iecc.com>...

> As far as radio journalism goes...
> I don't know about Australia, but journalism on radio in the U.S. is nearly dead.

Right now, radio news is thriving on public radio (which for our Australian friend is in the U.S. a cross between the ABC and not-for-profit community stations, one notable difference being advertising--Oz community stations can air it if they wish, U.S. public radio technically can't, so it disguises it as "program underwriting"). The daily NPR morning and afternoon news programs are consistently the most popular on public radio stations. And in most major markets and on state public radio networks, there is more of a drive to make the local news departments comparable to NPR in coverage and style. You probably won't make a lot of money--and there's a general seeming disinterest in investigative and enterprise reporting in favor of analysis, documentarianism and quirky features--but if you want to practice real journalism in radio, it's the place to be.

Warning: If you're a hardcore leftist, you'll probably quit in disgust and go work for a community/Pacifica station where you'll get paid even less (or not at all), but get little or no interference and

a congenial atmosphere.  If you're a hardcore rightist--oh, hell, you
wouldn't even take the job to begin with if you were offered a
commercial radio talk show--one of the reasons openly conservative
reporters are few and far between is that most rightists coming out of
school would rather be George Will or Ann Coulter than work the police
beat on the overnight shift.

>am?

It's true there's little or no money in small-market radio.  A lot of small-market radio has always been staffed as you describe, and the financial pressures on these stations increased exponentially after the Docket 80-90 fiasco.  When I was working at that level, long before 80-90, the jocks commonly doubled as newspeople, even going out and hustling stories on the street.  When the big stories hit, the owner and the receptionist turned into reporters.  I was once a combination PD/News Director/morning jock.  My crosstown competitor was the Owner/News Director/Sports Director/morning jock!    You do what you have to do.  The big bucks just ain't there.  Those fully-sponsored ball games may be bringing in 75% of the station's total revenue.  I've certainly "been there and done that."

However, in my top 100 market, hiring help has become extremely difficult.  And I pay considerably more than $16k plus full benefits and a company vehicle.  My last opening, more than a year ago, took three months to fill because of a dearth of qualified applicants. That makes it difficult for me to sympathize with people who say they can't find work in the industry even though they claim to be fully qualified.

I don't mean to embarrass you, but, if all you are looking for is 16k a year...I think clear channel would love to hire you. :)

Seriously, if you can right well, then I can't imagine why a editor would care what equipment you can operate, except some sort of word processing equipment. I know guys that still use typewriters! You should try to get a job on a newspaper in towns of 100k to250k people. Most of these papers still have local sports writers. And are always looking for somebody cheap! Then again I work for an FM music station in a medium market that has 2 fulltime newspeople and one parttimer Plus one of the best sport announcers in the nation doing local college basketball. (He works for MRN and the Indy 500 net in his free time) Our competition has 4 fulltime newspeople. So I guess my market is a little different than others.

So where's your station? If it's anywhere near Kansas (let's say a two-state
radius), I'll probably consider it.

S.E.N.
Warning, though: I haven't actually been in radio since 1995.

They didn't =( And I even have a friend in Wichita working for them.

>Seriously, if you can right well, then I can't imagine why a editor would

Ahem, "write" well (Sorry, force of habit).

>care what equipment you can operate, except some sort of word processing
>equipment. I know guys that still use typewriters!

The stupid thing is, they do. I see the openings and they require knowledge of programs the Tribune would never have. I go to the interview and they seem shocked that I don't havemuch knowledge of them. Then again, at sports editors conventions, they were *stunned* that a paper with a circulation of 4,000 published *daily*.

There are four or five daily papers that size in southeast Kansas and maybe a dozen dailes that small (Our regional AP office man told us Kansas is unique in that regard --- so many tiny dailies). Two years ago, we almost openly laughed when a lecturer said, "If you work at a small paper, say something around 20,000." The *largest* paper in our group was 6,000.

>You should try to get a

>job on a newspaper in towns of 100k to250k people. Most of these papers
>still have local sports writers. And are always looking for somebody cheap!

I've tried Hutchinson, KS, which is about 60,000 (pop) but it didn't work
out. I have a hard time believing that I couldn't work for a larger paper
because I could *concentrate on writing* instead of having to write, edit,
layout, develop film and process photos. I typiucally worked 60-65-hour
weeks during the school year (and after 6 1/2 years of that, all by myself,
I burned out this summer).

>Then again I work for an FM music station in a medium market that has 2

Doug McDonald mcdonald@scs.uiuc.edu asked ...

>>
How can you have something "mV/m/kW" ?

Would not mV/m scale as the square root of kW?
>>

Millivolts/meter/kilowatt is the standard way of indicating the efficiency of a stick.  And, all ND stations are cited that way, regardless of Class.

Everything is "normalized" to 1 kilowatt input, for this purpose.

To get the theoretical field at 1 km, mutiply the theoretical efficiency by the square root of the power input in kilowatts.

(50 ^ 0.5) * 362.10 = 2560 mV/m at 1 km, for a minimally "conforming" Class A stick with an efficiency of 362.10 mV/m/kW at 1 km, and 50,000 watts input.

Make any sense?

What is wrong with the Franklin array?
Do you know how it is set up? 1/4 over 5/8 wl or what?

How is the phasing handled?
This sort of thing is very interesting and I hope someone posts pictures and explanitions on a web site for all to enjoy.  geek-geek!

>>
What is wrong with the Franklin array? Do you know how it is set up? 1/4 over 5/8 wl or what?
>>

WHO's stick is a one-of-a-kind, more particularly described as:

```
Sect = 7
A = 120.00
          B = 300.00
                            C = 1.00
                                                         D = 1.00
```

The Sect 7 indicates that it is a "WHO Type" stick to the Commission's vertical field calculation algorithm. A normal sectional is Sect 2.

A = 120 means the bottom section is 120 degrees high.

B = 300 means the overall height is 300 degrees.

C = D = 1.00 are apparently used so that the Commission's algorithm won't blow-up with a divide-by-zero exception.

So, WHO's stick is 1/2-wave (180 degrees) over 1/3-wave (120 degrees).

In a Franklin, the top and bottom sections are equal, and in order to qualify as a true Franklin (Sect 3), both are equal to 180 degrees.

In most sectionals, the sections are equal in height or the bottom section is taller than the top section.

Mic signals are really really low voltage, and a computer is an
electronically noisey place for little signals.  You'd be best to plug
your mic into either an external mic preamp, or a little notepad mixer,
then plug into the LINE input of your soundcard, skipping the MIC input of
the soundcard completely. Of course you then need audio software, but you
knew that already didn't you?

Where's the double standard? We do quality programming AND we bother to get a license.

> Fab. I commend you. We need more support for local radio (note: "local"
> radio is about extinct, and all the "Contributions" n the world will not
> save them as long as Telecom is around)

My station has been on the air for thirty-one years, and we're not "in trouble". We don't need "saving".

> Good!!!!!!! Sadly for evey one guy who supports local radio and quality,
> there are 100 Clear channel suits doing the opposite. Soon there will be NO
> local radio anywhere in the US. TeleCom must be repealed.

I don't get the connection. Noncomms are not threatened by ClearChannel. On the contrary: ClearChannel has donated material and other non-tangibles to my station and other community/educational stations in the area. Infinity has also been most generous. See, when you are a licensed broadcaster, you can get corporate help. From here, we don't see wealthy corporate broadcasters as The Devil.

> You hate "pirates" remember? (we had that "discussion" last year).

I don't hate them; I have little respect for them. There is a major gulf between those of us who went to the next level to provide a station that gets and maintains a license, has stability and longevity (when you have been on the air continuously for thirty-one years, send me a post card), and put major sweat into the technical quality and programming that we air, and those who treat radio as something to do on a whim when it is convenient and fun.

Pat is a rare bird in today's radio; a clean, friendly voice who is really funny. I listened to the show, ever here in NY, thanks to a great group of fans, the PatPack, of which I am one.

Pat Alder

KOMO-AM cashiers Cashman

Thursday, September 5, 2002

SEATTLE POST-INTELLIGENCER STAFF

He's talented, funny and soon to be off the air again. Pat Cashman, jettisoned from the former KIRO-FM in 1999 only to be hired by KOMO-AM with the help of great fan support, is leaving KOMO this week to make way for a station makeover.

Friday is his last day on the air with sidekicks Lisa Foster and Gary Hoffman. Foster also is leaving the station; newsman Hoffman is staying.

KOMO, which becomes the Seattle Mariners' flagship station next season, is going all news in anticipation of becoming a bigger player in local radio.

Your refering to "pop" culture. I'm refering to "Corp" culture. Back then you had no mass-media. So what the people wanted to see/hear they got. Today we have global media corps who can define and create that "pop" culture and the sheople will simply follow!!

Marketing was not a power in the 16th century (thank God). Today media defines and influences tastes.

Truth hurts don't it Rich. "Do what I do , not what I say". "Actions speak louder than words". Turn off the radio like I do.......and pray to your God that the rabid box stops ranting and raving by the next century.

"If your not part of the solution your part of the problem" Rich. Everytime you defend rabid-hate-rant- you defend obscenity. Everytime you cry "foul" in regard to my posting language you only show your own hypocracy.

I was wondering if there are any other AM stations that are renting the use of someone elses communications tower. I'm the CE of an AM that is using a tower, via shunt feed, that has a large number of other tenants such as a cell phone company, 2 way repeaters, a pager company, ect. I'd like to compare notes as to how some of the technical and legal issues are handled.

Or you can buy a Becker Mexico from C. Crane.  It's about the only digital radio that can tune AM in 1 KHz steps.  But it is expensive!

 First of all, Mac's don't have sound cards, the audio is built in.  The
standard Mac microphones include a built-in preamp, which is why they use a
longer plug to get power.

A standard mike can be used if you use a self powered preamp and a standard
plug, it won't be long enough to reach the power contact.

You'd be much better off researching this in a Mac newsgroup. It depends greatly on what Mac you have. Older Macs had line-level input. Many newer Macs have no built-in input, so you'd have to get something like Griffin Technology's iMic:

http://www.griffintechnology.com/products/imic/

If your Mac has USB, I'd recommend an iMic even if your machine has audio input. The quality of the sound is much better.

But really, poke around at USENET archives and you'll learn all you need to know... (Try the link below for a good start.)

http://groups.google.com/groups?q=Mac+USB+sound+input&ie=ISO-8859-1&hl=en

Actually, the only change we have had in the last 400 or 500 years is a change from the dominance of the church and state to one of the dominace of private enterprise, the church and state. It did not change how popular culture of any kind originated, just the speed with which trends, fads and changes were transmitted across a specific geography.

Even the icons of media-crated culture such as The Spice Girls and American Idol would not work if they did not provide, as Shakespeare did, what the public was seeking. "You can bring a horse to water but..."

>
> Marketing was not a power in the 16th century (thank God). Today media
> defines and influences tastes.

Do tell. The system may be different, but there was very definitly an organized system and hierarchy for the dissemination of ideas and the promotion of goods. What was lacking was mass manufacturing, not mass marketing.

Taste, in any society, is defined by what are usually called today "trend setters" and one can see this group being active back into biblical times, and highly accented in the Roman and Greek societies. "Are red togas 'in' this season?"

The media, be it a TV network or a town crier or a troubadour, gets most of its clues and creative input by tapping into the trend setters.

This is not an aphorism. It is a trick question, to which nearly any
spontaneous answer answer is incriminating.

I presented it to demonstrate that trying to show that you are less lawless
than other criminals leaves you very much hoist on your own petard.

I never said there was any language restricting what one can say on the air. What I said was that broadcasters are not owners but trustees of the airwaves, and the public -- the true owner -- may revoke the privileges it grants if it feels they are being misused.

You seem to feel broadcasters have (or should have) a proprietary right in their channels. I don't think that was Congress's intent when it passed the Communications Act of 1934 and set up the FCC. Nor do I think very many Americans today feel broadcasters should have such a right.

>Did you check anyone else? And how many of those were for technical
>violations (the ones that really count)?

They are all for violations of the indecency rule.  And what does Clear Channel or anyone else have to do with the price of eggs? Surely you don't mean to suggest that if everyone violates the law then it must be OK?

You know, I've come a long way on this issue since 1984, when I was working down in Salinas and Al Gore came out in favor of censoring anything whose lyrics Tipper didn't like. I thought broadcasters were far better judges of what their audiences wanted to hear than Al Gore or a bunch of right-wing prudes. I felt the indecency rule was an unconstitutional restriction of free speech and should be abolished.

What changed my mind? Well, frankly, I think things have gone too far, and I think some radio station owners have forgotten that they don't own the airwaves, that they are only granted licenses to use them "in the public interest, convenience, and necessity." The folks that are purely in it for the buck, who have no standards, whether of decency, fairness (and no, I'm not talking about the "fairness doctrine"), factual accuracy, or community service: they need to be shown the door.  It's time for them to go.

Let me tell you what happened in Boston the other day. I came back to work from lunch on Tuesday to find our receptionist in a panic; she was getting deluged with calls from panicked listeners who had heard EAS tone on the air and thought a terrorist attack or some other horror was in progress. Our jock was doing production at the time and hadn't heard it, but the originating station for the state EAS system had sent what should have been a Required Monthly Test -- it had the proper header and footer and the Attention Signal, but no announcement to the effect that it was only a test. And of course it went over our air 15 minutes later, while the jock was still in production.

This might have been an honest mistake on the part of the folks at the other station, but it wasn't the first time they've screwed up an EAS test. There was one a year or so ago where they sent the header and the test, but no footer, so not only did our listeners get their favorite music interrupted by a lot of noise; they also got two minutes of loud rock music following the test (at which point our EAS box timed out and put our music back on the air). Then there was the test they sent with 30 seconds of hum at zero V.U., and another that came over in the middle of a live symphony orchestra broadcast -- our PD went ballistic after that one; he wanted me to tear out the EAS box and throw it in the dumpster. All this adds up to irresponsibility on the part of the owners of that other station -- the same kind of irresponsibility, I think, that leads to "sex for Sam" contests. The underlying attitude is clearly "the public be damned."

Well, *this* member of the public doesn't want to take it anymore. Screw 'em. Screw 'em all.

umar

simply not true - both were lacking. There is no mass marketing without mass communication.

I seem to recall that there have been more recent pronouncements saying that
broadcasters have a "presumption of renewal" of their licenses.  Maybe it
was in the 1996 Com Act.

For anyone interested, here's a reminder of upcoming DX tests; if
anyone
has any additions or corrections, please contact me. (BE SURE TO NOTE
THE TIME OF THE TEST; THEY ARE IN THE LOCAL TIME OF THE STATION)

Monday, October 21, 2002 - WLCR-1470, Louisville, KY - 3:00-4:00am
EDT. (IRCA)
E-MAIL: heuser@iglou.com
WEB: http://www.wlcr.net

Saturday, October 26, 2002 - KNOM-780, Nome, AK - 12:00-1:00am Alaska
Local time (4-5am EDT).
E-MAIL: rfn@nook.net
WEB: http://www.knom.org

Saturday, November 2, 2002 - WDFB-1170, Danville, KY - 12:00 - ??am
EST. (IRCA)
E-MAIL: music@searnet.com
WEB: http://www.wdfb.com

Please remember, what's listed as being on, say, Monday *may* be what
you
think of as Sunday night!

If you try for (or hear) any of these tests, PLEASE post a message
letting
me know, and please, drop the station personnel a note, via e-mail or
snail
mail, thanking them for running the test! Also, for brevity's sake, I
didn't post the QSL addresses; if you need these, let me know!

Lynn.

Not on a whim. It takes more than "feeling".

No, but it is a good reason to examine it for legitimacy if it is widely
violated by otherwise law-abiding people.

> What changed my mind? Well, frankly, I think things have gone too far,

So, you feel that YOUR limits should be the determinant? Not everyone
agrees with you, you know.

> This might have been an honest mistake on the part of the folks at
> the other station, but it wasn't the first time they've screwed up
> an EAS test.

Do you know what the word "test" means?

> Well, *this* member of the public doesn't want to take it anymore.
> Screw 'em. Screw 'em all.

I kind of surmised it was an emotional thing with you. Running rules and
laws based on emotion is not a really good idea.

Word of mouth is the supreme method of mass communication; it has been
demonstrated that people's ability to remember in pre-electronic
communication eras was enormous. Stories that taught, instructed or informed
were used to transmit messages which could cover all of England, for
example, in a few days.

Mass communication does not require a transmitter and a tower. It requires
vocal chords. Those have existed for some time now.

Unless the licensee voluntarily returns the lisence, or there is a
successful competitive filing (both costly and very difficult with very
poor odds), the licensee would have no reason to assume non-renewal. I
believe that in addition to extending the term of the license, the renewal
procedure was greatly simplified.

Oh please.....Dave Dave Dave, this post is so sad it does'nt really merit a response.

Fact is 400 yrs ago most folks were too poor for the luxury of travel and thus catching the rumour mill. You simply don't have it in you to concede the point.

You credibility is on the line...........I suggest you simply abmit you're "word of mouth" theory be dropped before you embarrass yourself Dave.

A printing press (which has been around for centuries) is a very effective
tool for mass communication, as well.

Here's another slant on the live & local thread:

What about live radio theatre?   Nearly every town of any size has a Community Arts Council with some potentially good voice talent.  Simply buy a block of time on a station, preferably AM, gather your best actors around a mike and tell 'em "you're on."  The Big Broadcast of 2002.

Radio without a net, just like they did it in the old days.  Sound effects could be stored on a digital system and an organ player would be mandatory.  We're going to bring that up at our next community arts council meeting.

How much would an hour of time cost on a 500-watt daytimer?

I'm sure I'll from a bunch of folks saying it can't be done, but some fellow from Minnesota is doing the same thing and doing pretty good at it.  Our show would be a one-time thing but it would be live and local, and who knows, the idea might catch on.

GTT

Which is quite irrelevant. Your point of citing "greater minds than [yours]" was a cop out. You still haven't addressed the "anything for money" standard.

>>Rich must have a standard of decency lurking somewhere in his head.
>>However, I'm not interested in chasing it down to see just what sort

<snip>

>What I'm willing to do on my radio stations and networks is very
>different than what I'm willing to tolerate on other people's
>stations.

Allow me to clarify what turned in to a confusing discussion. Rich, I made no mention of what you program. I was referring to your reaction to a pointless, offensive speech by another broadcaster.

I got the impression that even as disgusting and inflammatory as it was, that you don't care enough to do anything. But I think that you should. True, O&A is not your program. But it does reflect on your industry. If you stand idle while your industry is tarred by such behavior it could easily be interpreted that you advocate such shock radio mediums.

>Most people in the Talk Radio side of the industry know what kind of
>programming I'll tolerate. No one of any significance in the industry
>has ever accused me of having a lack of ethics or integrity. That only
>happens in newsgroups by people who know nothing about my programming.

Again, I didn't intend any reference against what you personally put on the air.  I am referring to your apparent "anything for money goes" opinion of your fellow broadcasters.

The problem I have with the "anything for money can go on the air" philosophy, whether used in your daily activities as a program director or not, is that it lacks any form of ethical compass.  I noticed that you didn't deny this position.  Instead you diverted to other issues, you made a few crude jokes, and all sorts of cop out arguments.

However, you didn't deal with the core issue:  The question is whether broadcasters and their regulators should allow something that could easily stir up civil unrest for no good reason, not whether the market will steer the parent company back to a more civil behavior.

I also take issue with what you posted in another message that the notion that two people exposing themselves in a cathedral hurts no-one.  The Cathedral happens to be private property.  The behavior could have been interpreted by many as an implied threat.

I've seen and experienced such behavior.  Some years ago, at a private Jewish school, some teenagers from the neighborhood broke in and defecated in the school synagogue.  Other incidents such as burning a cross on the property owned by a black family are similar.  I doubt you would think that either act should be ignored even if committed by juveniles, simply because nobody got hurt.  And we're not talking about cleaning up a pile of human feces or a couple pieces of burned wood.  We're talking about an implied threat against a segment of our community.  Why would the sex act in the cathedral be any different?

O&A's program did not specifically ask for this depraved disrespect. That's the only thing in my mind that gets them off the hook.  I am disgusted that they thought it was funny enough to encourage.  I am appalled that Jim Koch laughed along.  I'm not even sure his apology means much to me.  It will be a very long time before I, a micro-brew drinker, purchase another one of the beers his business produces. This behavior tears across the lines of any social fabric in our society.

Catholic Priest sex scandal notwithstanding, it is irrelevant to the question of O&A's behavior.  The issue is the use of a widely known and unfortunately popular forum being used to advocate depraved behavior toward a community of religious people.

This is not about those who try to enforce their morality on others.

This is about the free expression of religion.  Lesser deeds than this have caused major civil unrest.

The point of the First Amendment is for a free and CIVIL exchange of ideas.  O&A are treading on awfully thin ice here.  IMHO, so are you. It doesn't matter what part of Judeo-Christian or even Islamic culture you're from: You are your brother's keeper.

Jake Brodsky

Michael Medved got canceled from KVI, and that's even more freakish because he's massively syndicated. What the fuck is up? There doesn't seem to be much outrage this time around as there was in '99 when Pat got dropped from The Buzz. All I've seen is this article. Even patpack.org is out of date.

patalder@my-deja.com (Pat Alder) wrote in message news:<al87jd$1j7$1@xuxa.iecc.com>...

the fact is that there were professional story tellers who went form town to twon relaying the news, told as anecdotes or parables. This goes back to biblical times. In fact, the bible is a product in a large part of this precise oral traditon. It is a lost art in times of books, instant gratification and half-hour sitcoms, but story telling and the relaying of messages and their broadcast via town criers is a fact.

Maybe if you studied some history you would know that during most of the history of mankind, very few books existed, yet there was widespread dissemination of ideas and events. Perhaps not in microseconds, but, by the standards of the time, very fast and very accurate.

> radio mediums.

He supports more "leeway"...........so even an obscene thing like O&A in truth Rich will support (1st amendment and all (as long as it serves there purpose of course!!))

> Again, I didn't intend any reference against what you personally put
> on the air.  I am referring to your apparent "anything for money goes"
> opinion of your fellow broadcasters.

Post Helicom96 money talks ethics walks. Hey it's free speech right!!! lol.

>
> The problem I have with the "anything for money can go on the air"

Yep........good perspective.

>
> However, you didn't deal with the core issue:

Rich usually doesn't.

> The question is whether
> broadcasters and their regulators should allow something that could
> easily stir up civil unrest for no good reason,

Good question............as usual Rich and Dave will not address the question - you waste your breath.

> not whether the market
> will steer the parent company back to a more civil behavior.

But Jake - surely you know Rich and Dave are "politicians" and will provide all answers to all questions - without answering them!!! lol.

Dave is better at it BTW. That smooth talker SOB. gotta give credit where due ;-(

> The point of the First Amendment is for a free and CIVIL exchange of
> ideas.

Not for Rich and Co.........anything goes........push the envelope as long as $$$$$ can be made.

> O&A are treading on awfully thin ice here.

Sadly no........"our" government is bought and sold by the special interests Rich and Co. champion. ;-(.............there is no longer any "thin ice" ;-(.........I wish there was. ;-(

> IMHO, so are you.

He is - but since we (the listener) no longer have a voice, the point is mute. We have no control over "our" "democracy".......all is now controlled by big business (CC in this instance).

> It doesn't matter what part of Judeo-Christian or even Islamic culture
> you're from: You are your brother's keeper.

WOW an open minded person who does'nt hate Islamic peoples orthe religion )amazing esp. in this climate)...........I commend you for an open mind.

> Jake Brodsky
> (No, I'm not hiding behind a pseudonym.  I only use one when I have a
> reason not to use my real name.)
>

As I do - being a "pirate" (or former - whatever)..................at least I provided a service instead of hate.

You are rapidly winning the "Golden Obtuse" award. It was most common for people to gather to be read to, or to have stories told to them, or to have the latest news recited. The literacy issue, before the printing press, had to do with the availability of manuscripts and was precisely why memory was a far better tuned tool than it is today.

For example, it has been documented by observers of unwritten languages that entire verbal histories can be passed son between generations with nary a change of significance. You give too much importance to radio and TV and even the press as part of culture and, in fact, history. History is created by people, not by your TV set.

David, you've encountered a brick wall. In the span of human existence, the written word is very recent. The printed word even more so. Our very own little pirate clearly doesn't know how important the oral tradition has been to human history and mythology.

I was an English Literature major for most of my college years. The most fascinating part of that discipline to me was the oral tradition and how news was "transmitted" from place to place.

There were even "pirate" town criers who would be today's equivalent of The National Enquirer.

Rich

On 7 Sep 2002 02:54:04 GMT, Jake Brodsky <frussle@erols.com> wrote:

>I got the impression that even as disgusting and inflammatory as it was, that you don't care enough to do anything.  But I think that you should.  True, O&A is not your program.  But it does reflect on your industry.  If you stand idle while your industry is tarred by such behavior it could easily be interpreted that you advocate such shock radio mediums.

First, I have no real objection to "shock radio" when it's done responsibly. That may not seem possible to you, but I've heard great examples of that genre that actually even entertained me.

If anything, the radio station did exactly what it should have done (by FCC standards). They fired virtually everyone involved. There's nothing left for me to raise a fuss over. I know several influential people at the station. I'll call them tomorrow and yell at them. Once the laughter dies down (mine included) I'll call Mel and give him a piece of my mind. It'll be a small piece because I expect he'll hang up early in the conversation.

>However, you didn't deal with the core issue:  The question is whether broadcasters and their regulators should allow something that could easily stir up civil unrest for no good reason, not whether the market will steer the parent company back to a more civil behavior.

The only "civil unrest" I can remember being caused by a radio station was the destruction of a library by listeners who were told there was money hidden in some of the books. Unlike many here I don't believe radio has the power to cause civil unrest. Most listeners simply don't care. When Rush Limbaugh can't motivate enough listeners to vote for George Bush Sr. I hardly think he can cause Republicans to become unruly. It's entertainment, folks!

>I also take issue with what you posted in another message that the notion that two people exposing themselves in a cathedral hurts no-one.  The Cathedral happens to be private property.  The behavior could have been interpreted by many as an implied threat.

An implied threat??? Of what. More sex? Whenever I come across people having sex I usually feel envy that I'm not involved. I never feel threatened. The weapon used doesn't shoot very far, so my safety isn't at risk. Yes. The Cathedral is private property. However, it's also one of New York's biggest tourist traps right across from Rockefeller Center. I doubt it's the first time their security people have come across this kind of behavior.

Who was physically harmed by what the couple did? I realize Republicans are very uncomfortable with the concept of sex. I also realize they've figured out a way to deal with it. Especially the politicians. It's a shame it didn't happen under Rudy Giuliani's reign. He would have held press conferences and threatened to do something serious like he did with the museum in Brooklyn that exhibited a picture of the Madonna (not the singer) with breasts made of elephant dung. There's never a dull day here in New York.

I'll happily go along with you in the claim that it was in bad taste. I see bad taste every day. Ever watch TV? New York is a physically small place with millions of people squashed into it. I'm sure a trip here will cause you to encounter things you'd never see in Idaho. At least not in public in Idaho.

I used to know a man who owned a porn store. He told me most of the really kinky stuff got shipped out to the Heartland. I used to live in Dallas. Half the city is dry. You'll never guess which half of the city bought most of the booze. If you live in the Heartland, peek into your neighbor's window. I'll bet you'll see implied threats happening there, too.

>This is not about those who try to enforce their morality on others.
>This is about the free expression of religion.  Lesser deeds than this
>have caused major civil unrest.

As I recall, this happened in a relatively out of the way section of the Cathedral. If anything, it probably caused those who saw it to pray harder, either for the souls of those involved or to ask that they find someone to do something similar with. The couple was actually doing a service to the more religious folks by adding temptation they would have to resist.

The most recent civil unrest was a party the other night in Times Square to kick off football season. Several million showed up. Even New York drivers inconvenienced by closed streets were very civil. Angry but civil. I was on Fifth Avenue the other day near the besmirched Cathedral. There were a few people sitting on the steps drinking bottled water. They seemed perfectly at rest and very civil. Perhaps waiting for the next showing.

>The point of the First Amendment is for a free and CIVIL exchange of
>ideas.

What was uncivil about what happened? Incivility and bad taste are very different. This was bad taste. While I consider the event to have been in extremely bad taste I find the reaction of the blue noses to be hysterically funny. Especially in a place that represents an organization guilty of protecting those guilty of causing very real harm to children they were supposed to be counseling and protecting. The Cardinal in that very Cathedral is very high on the list of those accused of sweeping child molestation under the rug. Very hard to respect.

>O&A are treading on awfully thin ice here.  IMHO, so are you.
>It doesn't matter what part of Judeo-Christian or even Islamic culture
>you're from: You are your brother's keeper.

Actually, they're treading water. They've fallen through the ice as a result of what happened. They're gone. Fear no more. Go in peace to await the next horrible radio event.

It's a shame Carrie Nation is dead. You two would have made a wonderful couple.

>patpack.org is out of date.

Excuse me!! "Massively syndicated???? Medved is syndicated by a religious network (Salem) and probably has fewer than 100 stations, though his web site claims 140. Not exactly "massive" by syndication standards even if you believe the hype. I really loved the claim that the show is in "high demand." Many of his stations are owned by Salem, so you really can't count them in your "massive" list. When company-owned stations are forced to carry a show you can't claim high demand. You claim "the company forced me to take it."

Why would you expect outrage? He was replaced by O'Reilly, as I understand, and has never been a dominant personality in syndication to start with. When stations begin to drop O'Reilly I won't expect outrage, either. Most listeners have real lives and just don't care who is on the radio. At least not enough to offer any protest.

I think most of the posters have missed the point of why the stunt was offensive to believing Catholics.  Catholics believe in the real presence of Jesus in the sacrament which is kept in a tabernacle in every church.   Thus, committing an offense in the presence of the sacrament is called sacrilegious, or a purposeful, public statement that the perpetrators are publicly trying to insult God. This is nonsense to those who have no belief in the sacred and deeply hurtful to those who do. No one is hurt in a physical sense, but believers are hurt in a moral sense. To me, this seems to infringe on the freedom of religion, for believers to have the right to the sacredness of their own private space, which others are free to believe is nonsense but not to physically infringe on. To compare the harm done to that of the Cardinal covering up scandal is an illogical assumption that one wrong makes another wrong ok. It's like saying one shouldn't be prosecuted for cheating on their taxes because some high government official is accused of doing something illegal. If a strange couple has sex in your living room, it is doing no real harm to anyone, but I think that most of the posters if they came home to this situation would call the police .

So why would this be a problem for the faithful? The sin would be
between the perpetrators and God. God can take care of himself, wouldn't
you think?

> This is nonsense to those

Other than having their moral self-righteousness tweaked, how are they
hurt? Again, they didn't participate did they?

> To compare the harm done to that of the Cardinal covering

That isn't why we compare the wrongs. Having one's sense of propriety
tweaked is a far cry from children having their lives seriously damaged
by sexual abuse.

> If a strange couple has sex in your living room, it is doing no

To report a trespass, not to report having sex in the living room. Would
someone call the police if an invited guest had sex in the living room?
Aren't all invited into the house of worship?

Hell, start out with a 5-minute short, and get it sponsored by a coffee shop.

Getting a SFX guy may be the biggest challenge...

Its being deeply offensive doesn't propagate out of the religion however; its
recourse is calling the police and indecency statutes.

Being deeply offensive is often the point, and that's a political point:  ``Your
religiousness is crap.''  A secular point in a political world.

Calling down the FCC is a fine example of bluenoses calculating their chances,
and shamefully timid managers at WNEW, and perhaps at the FCC.

Imus's take on the O&A scandal (audio clips) by the way is at

1.  Aug 16, the day afterwards
2.  Sept 3, returning from vacation, 6am
3.  Sept 3, 8am
4.  Sept 3, 8:30 with Ron Insana

http://rhhardin4.home.mindspring.com/ona.ram

There is some Imus technique in it.

I don't recall anyone suggesting the act was sacriligious. Even the Caltholic League. I would bet. Christ, himself wouldn't have been offended and probably would have used his "he who is without sin cast the first stone" approach to this whole affair. Perhaps his concern would be that the couple was unmarried.

As I recall Christ treated Mary Magdalen with greater respect than the moneychangers in the temple. The Cathedral is a tourist trap. They make a great deal of money from the people who visit.

>To me, this seems to infringe on the freedom of religion, for

I believe freedom of religion is like freedom of speech where it's confined to the government's power to curtail speech or to prevent the exercise of a particular religion. I don't think it has anything to do with what individuals might do in a "sacred" space.

>If a strange couple has sex in your living room, it is doing no
>real harm to anyone, but I think that most of the posters if they came home
>to this situation would call the police .

The Cathedral is a public place. My living room is not. If I came home to find people having sex in my living room I'd be more concerned with breaking and entering than them having sex. After all, if they're having sex they're not stealing my property. It's a ridiculous analogy but it's fun to go with you on this one.

I think most people would probably stop to pick up their video cameras on the way to calling the police. They might even ask the police to take their time.

Rich

The remarks made by John Higdon, Ron Hardin, and Rich Wood clearly demonstrate that they only see the sex act, not its implication.  What a pile of apologist nonsense!

Using this logic, if a cross were burning on the front lawn of a black family, they'd say, "Aww shucks, it's just a couple flaming pieces of wood.  Bring out some marshmallows and make some smores!"  Clearly, none of these guys are willing to admit there is a subtext.  None of them are willing to concede that a broadcaster has responsibilities. And I doubt they understand the role of radio and television in places such as Rwanda, Yugoslavia, or the Arab states.

Rich doesn't think radio has that power.  Rich, I could not disagree more.  Maybe you think your programming and that of your peers is ineffectual because you and most of your listeners don't take it seriously.  And Rich, in your case, you might be right.  I suspect one of your goals is not to offend too many people because that's bad for business.

But before you say that about the entire medium, ask yourself if the genocide in Rwanda would have taken place without a radio station exhorting the populace to do it.  Ask yourself why it is that the Arab states are filled with people who seriously think the destruction of the World Trade Centers is a plot by the Jews --not the work of Al Qaida.  And ask yourself why so many in the former Yugoslavia think that Milosovic is a martyr for the cause of his country.

You folks are juggling some very sharp knives here.  I wouldn't be so casual about it if I were you.

I think you may have missed an important point, too. The couple wasn't
"in the tabernacle" or anywhere near the "sacrament", they were in the
foyer. How were they in the "presence of the sacrament"?

Somehow I don't think causing moral indignation is a crime.

Still, I'm glad to see O&A gone from the airwaves; I can now enjoy the good rock music Infinity programs around here for several more hours of the day. Now, if they'd just get rid of Stern, I could listen all day!

In article <alg7qi$7a4$1@xuxa.iecc.com>, no-spam@amadeus.kome.com says...

> So why would this be a problem for the faithful? The sin would be between the perpetrators and God. God can take care of himself, wouldn't you think?
>
> Other than having their moral self-righteousness tweaked, how are they hurt? Again, they didn't participate did they?

Perhaps a more crude example:

Your mother or wife or daughter is raped but not physically harmed. YOU are not physically hurt, YOU did not participate, THEY are not physically hurt. This should most certainly cause you some mental anguish and HURT feelings. Having your "moral self righteousness" tweaked is a way to be emotionally HURT.

I'm a Methodist, not Catholic so I don't share the same feeling of "high holiness" for the church building or its contents. Even so, I treat the buildings with respect. I also respect the feelings and beliefs of others (even non-believers) and have no problem understanding why members of a faithful community would be outraged that such an action took place.

As far as broadcasting, I believe in something that might be described as old school. I dislike the nearly pornographic and foul language content of many radio shows. It's quite possible to be funny, informative and entertaining without resorting to foul language and sexual innuendos.

I was taught that there is much freedom in radio, and that with freedom comes responsibility. When I was on the air I realized the diversity of the audience. While I did not bend over backwards to be politically correct, I did try to treat the audience with respect. Maybe that's why I never made it much higher than ADI 100 as a jock and was unable to crack the top 10 markets until I turned to radio and TV news as a career.

In spite of my religious and moral beliefs, I also believe in freedom of speech and freedom of the airwaves. While I hate for impressionable children and young teens to be exposed to many of the things currently available on radio, TV, and in the movies, I also believe that in our country the presenters of this material have a right to do what they're doing. As a consumer I can easily change the dial, turn off the switch, or simply choose to not attend movies. Children, however, will listen to this junk out of curiosity. The reality is, until the market for this type of entertainment goes away, people will have to deal with it. But remember, those who oppose presentation of this content ALSO have a right to protest and express their feelings if they so desire.

I need to buy a dummyload for HF that is capable of 3KW or more. I am perfectly willing to pay a fair price. What do you have? Commercial quality is preferred but homebrew is okay if it is well thought out and of quality construction.

>Why would you expect outrage? He was replaced by O'Reilly, as I understand, and has never been a dominant personality in syndication to start with. When stations begin to drop O'Reilly I won't expect outrage, either. Most listeners have real lives and just don't care who is on the radio. At least not enough to offer any protest.

I believe Mr. Medved was replaced on KVI/Seattle by Sean Hannity (who runs live 12-3 PM PT).

Mike

Jake Brodsky wrote:

> The remarks made by John Higdon, Ron Hardin, and Rich Wood clearly demonstrate that they only see the sex act, not its implication.  What a pile of apologist nonsense!

Nobody's paying any attention to the sex act.  The point is the moral righteousness you can bring out.  Offense is fun and, often enough, important, when the self-righteous want to enforce too.

``May the righteous indignation of God crush out the proud and the unholy!'' - Erik Satie, who regarded the line as amusing.

John & Ken used to be offensive in a way more to my liking, getting angry grandmothers to call in, on KABC and the old KFI; but you take what you can get.  They didn't need sex at all, just some line about flag burning or the pledge of allegiance.

John's views on flag burning aren't particularly interesting, but thinking of all the offended people was very fascinating.  It holds an audience of people like me, not that that's a huge demographic. It's an anti-TV-news-position-on-public-issues audience.

It's possible that O&A's audience is young enough to be interested in the sex too, but I'd think they'd be jaded in this age.  Probably sticking it in the face of the horrible nuns that taught them has an appeal, a rebellion.

No. I'm saying I've met people who believe that topless dancing is a public service. I can't remember the last topless bar I was in (I drink only socially in restaurants and hate cigarette smoke) and have never had a lap dance, so I can't say from personal experience exactly how I'd describe the "service." Pubic service, perhaps.

I just find it funny that there's such an outcry over a natural act being performed in the same place as child molestation. The two acts aren't comparable and the punishment for them should be appropriate to those acts.

Why are my opinions extreme? They seem rather rational to me.

>Well then, using that as an excuse, what's wrong with selling
>narcotics to minors?  There is a big market for this stuff, you know.
>Do you have to believe that this is a public service just because the
>market exists?

Actually, greater minds than mine have seriously suggested making drugs legal. Not being involved with drugs I can't say what the result would be, though it would seem to eliminate the extremely dangerous way that market operates. Personally, I don't even want to be around

those who use drugs, so I'm not an objective judge of that
marketplace.

>I tend to agree with your previous postings that nothing much will

Absolutely.   My daughter is in the Army in Germany and insisted on taking her Saturn to Europe.  I called Saturn (customer support) and asked if there was a way to do that - convert the radio to a 9 khz split,  and also the FM radio to work on 100 khz splits ... they didn't know how,  but she gets enough stations anyway....

It annoys a group of people who want to rule by force.

It can have a moral point: ``morality is not so simple-minded as you guys

think.  It requires work, effort and sacrifice.  The rest is moralism
and isn't worth anything.''  That's why you want to annoy moralizers, even
bring them out.

A similar point is made by flag-burning, but about patriotism and its
bogus forms.

Even speech which you find "uncivil" and in "poor taste" is protected from legislation. So yes, it is about "free speech".

> I'm sick of rude, obnoixous,
> mean-spirited radio gabage.

Then TURN OFF the radio and stop presuming to dictate to others what they may or may not hear.

> ENOUGH!................add some brains and
> civility to fucking radio!!.............There must be more than NPR out
> there surely!.............Step up the plate and produce quality programing
> dammit!

I have stepped up to the plate. I support my local community stations in effort and funds. I am on the board of one of them, and have contributed my time, expertise, and my personal influence with commercial broadcasters who have donated everything from equipment to STL channel space at my behest. I support quality radio, and I put my money, time, and influence where my mouth is.

What are YOU doing to put quality programming ON the air, other than griping in a newsgroup about how you want everything you don't like taken OFF the air?

...and so am I.  Why should that be an issue?  This is not so much about party politics as it is an ethical issue.

The bottom line is that the radio broadcast industry clearly doesn't have a standard such as yelling "Fire" in a crowded theater.  There are no clear guidelines.  Although I'm not trying to put words in his mouth, I suspect that many such as Rich Wood believe that without these standards or other social contract, anything goes.

Thus, at least to Rich, the market justifies the activity.  He even suggested that all drugs should be legalized.  I notice he didn't go so far as to say that they should be legalized for minors.  Clearly, Rich must have a standard of decency lurking somewhere in his head. However, I'm not interested in chasing it down to see just what sort of depraved behavior would be allowed under that standard.  I suspect his tolerance of such things is far greater than mine.

Here is the problem with this "market justifies the activity" position:  A lack of standards doesn't imply that you or anyone else should program with a lack of ethics.  Money may drive your day to day decisions, but it's ethics that keeps people in business over the long term.

People listen to Opie and Anthony for the same reason they rubberneck when there is an accident on the other side of the road.  For many it's fascinating to listen to these dopes self destruct.  And then, when it actually happens, these same people can pretend to be shocked, surprised, and offended when they actually hear something so obnoxious the radio hosts get fired.  Meanwhile, the radio station ratings go through the roof.

Frankly, if I was in Marketing, I'd really question whether sponsoring that sort of program is a good idea.  But then marketing is often the least respected part of business.  Nothing I see from that side of business surprises me any more. For my own sanity, programs like that are the last place in the world where I would want to spend my advertising dollars.  But that's just me; I'm an engineer, not a salesman.

Finally, the difference between a car wrecked on the other side of the road and this nonsense is that the car wreck is almost never intentional.  The O&A team know exactly what they're doing, as do the stations that carry them, and the people who listen to this awful dreck.  I think that those who say otherwise are deluding themselves just so that they can look in the mirror every morning and not flinch in disgust.

Peace.

Perhaps you actually involved yourself with broadcasting rather than just
took potshots at it, you might understand things a little better.

I don't have to wait for Mr. Powell. I have my own copy of the rules.
Since it was you (and not he) that made such an issue of "breaking the
law", it seemed logical that you had some particular insight into the
matter. I'm sorry to see that it was just a matter of tires spinning.

The OEM Delco unit in my '92 Eldorado is a terrific DX'er.  Also has
AM stereo.

>Thus, at least to Rich, the market justifies the activity.  He even suggested that all drugs should be legalized.  I notice he didn't go so far as to say that they should be legalized for minors.

Hmm. I think you need to reread my post. I recall saying "greater minds than mine have suggested ..."

I neither advocated legalization for minors or adults. I simply said it might remove the very dangerous activities associated with drugs being illegal.

>Rich must have a standard of decency lurking somewhere in his head. However, I'm not interested in chasing it down to see just what sort of depraved behavior would be allowed under that standard.  I suspect his tolerance of such things is far greater than mine.

I challenge you to show me any standard of depraved behavior I've ever allowed on any station or network I've ever run. I don't recall WOR ever being accused of either depraved programming or the promotion of such things.

The ABC Talkradio Network never advocated such things while I was there, nor did Tom Bodett's "End of the Road" show (which I produced).

Your level of intolerance appears to be very high, so you may be right that my level of tolerance of a lot of things that don't harm people is significantly higher than yours.

What I'm willing to do on my radio stations and networks is very different than what I'm willing to tolerate on other people's stations.

Most people in the Talk Radio side of the industry know what kind of programming I'll tolerate. No one of any significance in the industry has ever accused me of having a lack of ethics or integrity. That only happens in newsgroups by people who know nothing about my programming.

Rich

Yeah,  but Mr. Powell is the one who ENFORCES the rules.   His interpretation of
the
rules are probably going to be somewhat different from YOUR interpretation,  and
the
Commission's interpretation.

Fortunately - their interpretation is the one that's going to count,  and if yours
differs from theirs, it won't count.

Powell and Copps are spinning their wheels at www.fcc.gov.   Read all about it.
Download the *.pdfs.   They're there.

And,  I'm not hoaxing you as a joke.   Certainly WNEW(FM) isn't taking it as a
joke.

Growing up, I had a car radio from a 60s Ford Falcon.  I mounted a standard
car radio on the peak of my grandmother's house and ran coax down to the
radio which I ran off a battery charger.

>From the southernmost tip of Texas I could pick up 50,000 watters from
Dallas/Ft Worth and New Orleans IN THE DAYTIME.  That radio hung on the
nighttime clear channel signals until ten in the morning and they would
start fading back in around two in the afternoon.

They hold no proprietary rights in their licenses; look at any broadcast station license and you'll find language stating exactly that. If the public, through its designated representatives, sees fit to withdraw that privilege it has the right to do so.

As I said to someone else in here, the airwaves are public. Some in here don't want anyone to know that.

> But as to specific rules, the indecency rule comes to mind. How many times has Infinity been fined for violations of that rule? Willful and repeated violation of FCC rules is sufficient grounds for revoking a license.

Many times -- but as I said some time ago, umar, they perhaps viewed those fines as a routine cost of doing business. It is not unlike a guy who owns a high-powered Porsche and has a little problem drinking too much fine wine. He gets caught speeding too often, and often with a little alcohol aroma on his breath, but merely views the fines, insurance points, and attorney's fees as a routine cost of owning such a car and enjoying the sauce.

>
> I'd like to see Infinity stripped of all its licenses. Make an example of 'em, and the others will start behaving like responsible adults.

I'm glad someone else shares a similar ethical train of thought, umar.

The defenses I hear against license revocation are what one lawyer used to call "Tiny Tears" -- it plays out like this. A lawyer has a client who may have been convicted of drunk driving, or even leaving the scene, etc. After conviction and pre-sentencing, he gets up and gives an emotional speech - "putting my client in jail will serve no purpose. My client has suffered ENOUGH! He has lost his car, has had to stand trial, blah blah blah" -- then the slug's mother, children, wife are all crying in the courtroom.

The plea doesn't usually work. Why not?

Because punishing the guy will serve as a lesson to him, and, most of all, a deterrent to others who might think of engaging in the same behaviors.

This crap is going to continue until someone gets their license hit.

I have several station licenses in my hand. Could you point out on which page it says that? I see things like "hours of operation" (unlimited), transmitter and antenna parameters, but nothing that talks about "rights". Do I need to heat the paper up to bring out that language?

> If the public, through its designated representatives, sees fit to withdraw that privilege it has the right to do so.

For cause, based upon law and regulation.

> I'd like to see Infinity stripped of all its licenses. Make an example

I don't know how to tell you this, but Infinity is one of the more
responsible broadcasters overall. The message you would send is that
license revocation is nothing more than a capricious activity based upon
individual whims.

Is that how you REALLY want broadcasting to be run?

>bring them out.

Moralizing is extremely dangerous. Moralizers usually get caught.
Jimmy Swaggart was a moralizer. He got caught with hookers in a motel.
Henry Hyde was a moralizer. During the Clinton fiasco he had to admit
to nearly the same kind of infidelity he was supposed to be
investigating, as did several other legislators who were forced to
admit their failing before the press made them public.

Whenever I see a moralizer I wonder what kind of immorality he's
guilty of. Priests are moralizers. Children are molested. Churches are
moralizers. They protect the priests.

It would seem that running one's own life should be hard enough
without taking on the responsibility of running others'.

>Well if the radio says the Boston Mayor was killed/hurt and his family
>rushed to the hospital and got killed in a carwreck in trying to get the the
>hospital, then what?.............Radio still blameless I'm sure..right Rich?

That's quite a stretch, but I'll go with it. Just like in this case, the "talent" was fired. It's awfully hard to anticipate what talk show hosts are going to say. You assume they'll be responsible and, every once in a while, you get burned. You act on what they actually do, not on what they might do.

I agree that the Boston stunt was cruel and I would have fired them on the spot, regardless of the ratings they brought to the station.

In the case of the Copulation in the Cathedral (sounds like a Jackie Collins title) it hurt no one. Unless, of course, listeners rushed to the Cathedral to watch it happen, pre-orgasm, and died in car wrecks. I can picture traffic on Fifth Avenue if every listener were a voyeur. Car wrecks all over the city.

We just can't get around it: the real pro in this kind of radio is still Howard Stern. He goes right up to the line but never goes beyond it.

>> The shame of this stupidity is that other companies will rethink radio

>GOOD.....maybe radio will FINALLY start offerning compelling programming
>after all these years fo miserable dreck hate-rant-shit.

What would you consider compelling programming? Instead of obscene ranting why don't you offer us some ideas? What do you want to hear? Personally, I like Charlie Rose a lot but I can't imagine his show attracting enough listerners to attract advertisers.

Give us a list of great ideas that are commercially viable and I'm sure someone in radio will give them a try. But please, leave out the obscene words that the FCC won't let us broadcast.

You talk about dreck, then shower us with it.

Rich

Rich did not say that. I intepreted his statement to be more along the lines of a questioning of the vague standards and the futility of having anything but the community and competitive situations regulate what is entertaining, proper and acceptable and what is not. Any attempt to regulate content is far more pernicious than letting those who pass the line discover that advertisers defect and listeners in the vast majority do, too.

Rich used the drug issue to show that nothing is black and white. He pointed out that there are some who would decriminalize drugs, and that their justification is a reduction of the associated and concomitant criminal behaviour. And there is a point / counterpoint situation there that is worthy of discussion; you, it appears, would prefer to quash such discussions.

I actually tood a class in school called "ethics" which went back to tribal behaviour and the ancient Greeks. The conclusion is that even in highly cohesive societies, ethics is defined by age, sex, occupation, faith, etc. In other words, ethics is not a static, tangible quality even in the "best" of cases.

Actually, to the target audience, on most occasions, O&A were truly entertaining. They were not to me, however. But I am not in the target.

Except for a couple of stupid incidents, most of the O&A content was, frankly, juvenile and not particularly "out there."

The fact that ratings go thorough the roof may also indicate what many sociologists and students of the mass media have long said: the media reflects taste more than it creates or changes it.

Keep in mind that I find, resident pedophiles or not, incitement to commit sex in a church particularly tasteless and pretty offensive. But I am not "everyone."

Companies like P&G don't buy talk. I think tha tis over reaction, but within their rights. there are plenty of clients to go around, and Stern has proven that for ever 20 clients, there are 15 who will not buy him but the 5 that do are well matched with his demo and content.

>

I would be that O&A were not trying to get away with anything. To this day, they probably think their contest and stunt were pretty entertaining. And probably 99% of their numerous listeners did not find it offensive. I did, but I don't listen.

I remember when folks tried to cause problems for radio stations that played rock and roll.

The more things change, the more they stay the same.

I had a fantastic 1975 Buick Century with a Delco radio. It used an antenna wire in the windshield. It was directional, but extremely sensitive.

I will not condone what Opey and Anthony did, and yes Infinity should be fined heavily....like maybe 10 to 20 million...that would hurt pretty hard and make them think twice next time! But I must make a point here about how the FCC treats Radio and TV differently. How come network TV can show nudity and voice many of the 7 dirty words, in prime time...over the air, not cable, yet nobody is up in arms about that! So why is everybody so upset about one stunt on radio when we can SEE the same thing nearly every night on TV. They just dress it up and call it drama.... Maybe radio should go back to the old days of radio dramas, then we could do whatever we want!

Oh for the good ole days....that never really were all that good.

As I recall, RKO General was, effectively, stripped of all its licenses. What effect did that have on the behavior of other broadcasters?

No, you were right. Mr. Gaffo has a great deal of experience with law
breaking. You see, he is a pirate broadcaster.

No pot-kettle-black syndrome here, of course.

There is a major point here. My standards are my standards. Your standards are your standards. Rich Wood's standards are Rich Wood's standards. Even Gaffo's standards are Gaffo's standards. Each person's standards dictate his own, personal conduct and participation in life. No one else has to actually know what they are.

So let's look at standards. I think shock radio is, for the most part, a boring waste of time. It is dreck. O & A, while I've never heard them, probably fall into this category. So I don't listen, which I why I have never heard them. (What a concept!) But there seems to be a contingent that obsesses over bad programming rather than simply ignore it (or proactively support good programming). The only apparent motivation is the desire to dictate to others what they may or may not hear. Otherwise, what is the point of all the brouhaha? If people want to listen, they will. If they are offended, they can blame themselves for choosing to listen. Those who don't like it can avoid it. Seems pretty clear to me.

If there is any law violation involved, let the authorities handle such events as they would any other situation where law-breaking occurs.

> Here is the problem with this "market justifies the activity"
> position:  A lack of standards doesn't imply that you or anyone else
> should program with a lack of ethics.  Money may drive your day to day
> decisions, but it's ethics that keeps people in business over the long
> term.

If that is true, then ultimately the tasteless shows will fall from natural causes, like lack of listenership or other advertising-effectiveness issues.

> People listen to Opie and Anthony for the same reason they rubberneck
> when there is an accident on the other side of the road.  For many
> it's fascinating to listen to these dopes self destruct.  And then,

> through the roof.

Probably true. But who do you elect to select the high road for these listeners?

> Frankly, if I was in Marketing, I'd really question whether sponsoring
> that sort of program is a good idea.  But then marketing is often the
> least respected part of business.  Nothing I see from that side of
> business surprises me any more. For my own sanity, programs like that
> are the last place in the world where I would want to spend my
> advertising dollars.  But that's just me; I'm an engineer, not a
> salesman.

None of this would ever appear on a station which I owned or had any control over. But that's just me; I'm an engineer, not a salesman. What others do, however, is what others do. I'm not their nanny, nor do I expect my government to be their nanny.

> Finally, the difference between a car wrecked on the other side of the
> road and this nonsense is that the car wreck is almost never

> just so that they can look in the mirror every morning and not flinch
> in disgust.

Again, however people want to justify their own actions is between them
and their consciences. The last thing we need is to have government act as
Mom.

There does seem to be an inordinate amount of angst over what amounts to not much in the global scheme of things.

Rich Wood <richwood@nyc.rr.com> writes:

>Whenever I see a moralizer I wonder what kind of immorality he's
>guilty of. Priests are moralizers. Children are molested. Churches are
>moralizers. They protect the priests.

I quite agree with you about moralizers, as improbable as that may seem in light of some of my other posts.

On the other hand, I don't think it's fair to tar all priests with the same brush. The news media are forever digging up scandal and sensation; if there are 99 faithful priests for every one that breaks his vows, the media will still make the whole Church seem rotten to the core. But things are never as bad as they seem; there is not a terrorist on every street corner, nor a gun-toting mass killer in every schoolyard, nor a predator in every parish. These sorts of things are the rare exception not the rule.

> It would seem that running one's own life should be hard enough
> without taking on the responsibility of running others'.

I quite agree.

Good!!!!!!! Sadly for evey one guy who supports local radio and quality,
there are 100 Clear channel suits doing the opposite. Soon there will be NO
local radio anywhere in the US. TeleCom must be repealed.

>

How many times has Infinity been fined for violations of the indecency
rule? Let's see:

(from http://www.fcc.gov/eb/broadcast/obscind.html)

06-07-2002 Notice of Apparent Liability -

Infinity Broadcasting Operations, Inc., WNEW(FM), New York, NY ($21,000);

05-24-2002 Memorandum Opinion and Order -
Infinity Broadcasting Corporation of Los Angeles, KROQ-FM, Pasadena,
CA (M.O.&O.);

03-22-2001 Memorandum Opionion and Order -
Infinity Broadcasting Corporation of Los Angeles, KROQ-FM, Pasadena, CA
(M.O.&O.);

03-02-2001 Forfeiture Order -
Infinity Radio License, Inc., WLLD(FM), Holmes Beach, FL ($7,000)

12-05-2000 Notice of Apparent Liability -
CBS Radio License, Inc., WLLD(FM), Holmes Beach, FL ($7,000);

06-13-2000 Forfeiture Order -
Infinity Broadcasting Corporation of Los Angeles, KROQ- FM, Pasadena, CA
($2,000)

... and that's just in the past two years. Responsible, you say? I say "willful and repeated".

>Is that how you REALLY want broadcasting to be run?

Is this how *you* want broadcasting to be run?

I stand corrected. Rich is not a Republican. Your posts sure gave me that
impression. My mistake. Perhaps Rich is a Democrat, or a member of the
Natural Law Party, or the Libertain Party or maybe a registered Independant
(me).

Your tolerance of hate-rant bigotted mean spirited speech is harmful to
people. The very shows you defend create a mean selfish and insensitive
society. Try creating beauty and helping our sick society, don't contribute
to its cancer.

The vitriol on AM is sick and petty and evil - yes evil.

A station did that up here in the early 1970s but I think they called it "Electric Circus". There also was a concert venue on Long Island by that name, IIRC.

"G.T. TYSON" wrote:

> Around 1976 a station here aired "Fantasy Park" a daylong pseudo-concert with every imaginable band that was popular at the time... it was merely their regular studio recordings with audience sounds dubbed in, but many listeners thought it was for real and called the station asking where tickets could be purchased. Anybody remember that one?

> Personally, I like Charlie Rose a lot but I can't imagine his show
> attracting enough listerners to attract advertisers.

And that is the problem! We all know that. $$$$$$$$ talks and that means low-brow. BUT low-brow need not be hateful. Radio's hate-filled shock-jocks are alot moreso than 30-yrs ago, while TV has generally not gotten worse.

Such shows contribute to our ills, and should stop. Offer more "handyman shows" (Glen Higgy type stuff), more financial stuff (Motley Fools trype stuff), some gardening shows, some pet-care shows, lake wodigone-type stuff/etc.................shows that HELP folks, not mean-spirited stuff!

There are so many things which could improve radio, but I'm sure not seeing it. The above shows are very hard to find on my radio dial. Glen Higgy is just gone! (he was great BTW).

>
> Give us a list of great ideas that are commercially viable and I'm
> sure someone in radio will give them a try.

Nope anyhting new is too risky........so just more hate-rant is to be expected. At this point folks would be happier without radio. It's just a rabid box today (esp. on AM)

Why thank you. A compliment from you certainly means a lot to me.
Considering the quality of your posts I don't expect much from you,
nor do I expect any positive contribution to the quality of
broadcasting, piracy or any other media delivery system you may be
interested or involved in.

I simply asked you what you wanted from radio and suggested that your
language said a great deal about you. You complain about dreck, yet
fill your posts with obscenities I consider dreck.

Why not answer my question instead of redirecting my redirection? I
suspect it's because you don't have an answer and it's easier to tear
down than create. Every newsgroup needs a troll. If you didn't exist
we'd have to create you.

What folks? Where do you get your information? Radio is doing quite well, especially Talk Radio, so you speaking for the entire nation of radio listeners doesn't hold water. Please understand that you speak for one person - yourself. Most of the American public is literate and can speak for themselves.

Your claim that the country craves good taste doesn't square with what I see as highly rated in radio and TV. When Eminem wins best anything I have to believe the country wants dreck. How come TV shows where people eat worms light up the ratings?

Gaffo uses obscenities to tell us he wants a higher class of programming. If we were to see a higher class of Gaffo we might actually believe it.

>"Savage" is from your network I think?? He's hate-rant.

Wrong. He's on the Talk Radio Network out of Central Point, Oregon.
The original ABC Talkradio ceased to exist many years ago.

I left the IDT/Talk America Radio Network about a week ago. Nothing on that network qualified as "hate-rant." Barry Farber is a gentleman's gentleman. Chuck Harder isn't hate. The weekends (which no longer exist) were a collection of niche shows from motorcycles to antiques, all live. We even had a Rabbi doing relationships.

>>my level of tolerance of a lot of things that don't harm people
>> is significantly higher than yours.

>Your tolerance of hate-rant bigotted mean spirited speech is harmful to

>society. Try creating beauty and helping our sick society, don't contribute
>to its cancer.

First, you give radio much too much credit for influencing society. Even the most listened to network talk show has about a .4 rating (percentage of the pouplation). Hardly enough to qualify as anything more dangerous than quirky entertainment.

The only show I've been involved with that could be considered "hate-rant" was Bob Grant. We finally removed him from the WOR network. Otherwise a partial list of my shows follows. Pick the hate-rant ones for me:

Tom Snyder, Sally Jesse Raphael (radio version), Dr. Joy Browne, The Dolans (consumers), Warren Eckstein (pets), Tom Bodett, Joan Rivers, Joey Reynolds, Arthur Frommer (travel), The Money Pit (home improvement), Ralph Snodsmith (gardening), Phil Lempert (shopping), Fodors (travel), Online Tonight (computers/internet), Into Tomorrow (technology), Doug Stephan, Looking at the Law with Neil Chayet - and a few dozen more over the years.

Please go over the list and pick out the hate in these shows.

>The vitriol on AM is sick and petty and evil - yes evil.

Pick up a copy of Talkers magazine and look at the ads for talk shows. With the exception of Savage and Schlessinger, I see ads for all kinds of shows that don't have a hint of hate in them. How about Cigar Dave? Dr. Gabe Mirkin? Rhona at Night, Jim Bohannon? Duke and the Doctor?

Where's the hate?

I think you need to change the station.

Actually, when I went back to college some years ago, I studied psychology and sociology, the two subjects most related to radio programming. There is considerable evidence in scholarly studies that popular culture is self-generating and of and by the people; the media, whether it be contemporary electronic forms, or the theater (the first true form of mass media)* reflects the taste and interest of the people.

Did Shakespeare foist vulgar, popular stories on the people, or did the people flock to see what they had wanted all along? Was Beowulf intended as a historical document or popular entertainment? Heck, we can even put much of the Biblical storytelling and teaching by analogy and anecdote into this context: people pay attention to what they like and are interested in.

But you would have to sit through hundreds of hours of classes and lectures and dedicated a year or two to reading to understand this. It is far easier to shoot from the hip (and about as accurate).

* Some will argue that the repetitive story telling of the troubadours was a form of mass media.

I agree about the majority of priests. However, a religious organization that protects the rotten ones and reassigns them to work with even more children has a serious moral and ethical shortcoming.

Would you suggest that the media ignore such things? If the media hadn't brought all this to light not a thing would have changed. Media attention is a very powerful tool to right wrongs even though it's usually used to scare the hell out of us with hype.

Rich

I agree about the majority of priests. However, a religious
organization that protects the rotten ones and reassigns them to work
with even more children has a serious moral and ethical shortcoming.

Would you suggest that the media ignore such things? If the media
hadn't brought all this to light not a thing would have changed. Media
attention is a very powerful tool to right wrongs even though it's
usually used to scare the hell out of us with hype.

Ah, you bit. There is nothing there about programming. It basically says that the license isn't good past the expiration date and that the station is subject to the rules enacted by government. That's it. NOTHING about what they can "say" on the air, or about "rights".

> How many times has Infinity been fined for violations of the indecency
> rule? Let's see:

Did you check anyone else? And how many of those were for technical violations (the ones that really count)?

> ... and that's just in the past two years. Responsible, you say? I
> say "willful and repeated".

Now, go check ClearChannel.

> Is this how *you* want broadcasting to be run?

Doesn't bother me in the slightest. Apparently it is a good revenue stream for the government. God knows it needs it.

The New York Post??? That's the print media's version of low class
radio. Remember that the London version of the company's papers prints
photos of real bare naked ladies. Hardly the high road for an apology.
When they do it in the New York Times I'll believe them.

>2) The TV commercial, which, according to some, depicts underage drinkers hiding
>beer from the police at a party, has been pulled.

So, the beer company was a perfect match for the show. An
irresponsible company advertising on an irresponsible show. Friends
tell me the beer is of the same quality as their advertising.

>I don't know broadcast law very well, but it's my understanding that the FCC
gets
>very upset if you run a contest of any type which isn't really a contest.

Very true, but they don't revoke licenses for it. They fine the

stations and have stringent regulations about broadcasting the rules.
Clear Channel got caught not informing listeners their contests were
not local. They were fined and changed the information contained in
the rules. It's legal.

>4)  There is little news as to whether the boycott will stick,  but many Boston
>establishments have told Sam Adams brewery to take a hike for the present.

I wonder how many other establishments picked up the product,
considering it to be irreverent and cutting edge.

It'll be old news in no time.

Any station that is willing to pay a fine for obscene language would be more
than willing to run your program.

You're confusing obscenity with indecency.  The former is NOT protected by the
First Amendment; the latter is.  Broadcasting obscene language gets a station

fined.

Terrific. Buckley isn't exactly America's sex symbol. The thought of Buckley having sex is beyond comprehension unless it was accompanied by a conservative panel analyzing his technique and the contribution such an act would give the Conservative cause. Kinda unsexy.

> By it's title, it's meant to be played at midnight during the FCC's designated 'safe harbor', and it is pre-recorded. Ostensibly, if they're willing to play rap or punk music, Zappa, George Carlin, etc. with such 'parental advisory' lyrics they will perhaps be open to this material. These mostly half hour but some hour long episodes meant to be played weekly or bi-weekly, mostly spoken words, voicemail messages, contains tasteless, explicit and politically incorrect material throughout. 50 episodes in all. Not TOTALLY disgusting wall to wall, there is artistic merit to it. The prospects that I've found that might be willing to play this show are the following leads:
>

> WRFL 88.1 FM in Lexington, KY
> WORT 89.9 FM in Madison, Wisconsin
> BFM in New Zealand

in article aktaar$468$1@xuxa.iecc.com, Greg and Joan  wrote:

> So, no, I would not like broadcasting to stop. I only want IRRESPONSIBLE broadcasting to stop.

Irresponsible according to whom? When you start to filter, then someone has to ultimately set the standards. Who would that be? You? Me? That mid-western farmer? The pawn shop owner in Manhattan? A committee? Selected by whom?

> You're missing the point. This was not a content issue. It's a CRIMINAL issue.

That is still content. The station wasn't operating over-power. It wasn't off-frequency. You are complaining about what was presented on the station's modulation. That is called "content".

> Broadcasting can be done responsibly -- without having to super-sanitize everything.

How?

> As I said, bad tastes sells. But -- criminal acts shouldn't.

Criminal acts should be prosecuted under the law.

> I am a champion of the first amendment. But the first amendment does not include the right to yell fire in a crowded theatre, engaging in other acts that can endanger public safety - such as broadcast hoaxes, and as far as I know, defiling a house of worship.

And let the punishment fit the crime in accordance with the law. I don't recall that the public safety was endangered in this incident. And I think the Catholic church has quite adequately defiled itself in recent months.

> How about taxpayers who wouldn't be caught dead listening to dreck like that, but have to pick up the tab for it, or suffer the consequences of it?

Do you want to live in a rubber room or get an itemized bill for each and every action you take during the day?

> So what you're saying - anything goes! And there should be no test of responsibility. Encouraging people to have sex in a church and broadcasting it on air, that's OK!

No, that is your rhetoric to attempt to discredit what I DID say. I say, in case you missed it, that anything goes. Those responsible for any and all REAL consequences should be held accountable. There is no Constitutional right to never be offended.

> Now - "offensive material" --- even if you weren't listening - the "offensive

> material" took place in a house of worship,  entailed illegal acts,  and
> affected a
> hell of a lot more people than those listening to the demented programming
> that day.

But who was actually harmed in a real way? Again, with feeling: there is NO
Constitutional right to an offense-free existence.

> A broadcast hoax,  or dangerous,  or illegal stunt,  has the potential to
> affect
> many more people than the idiots who enjoyed the sick programming on stations
> carrying O&A.

Some hoaxes are cruel and mean. When broadcasters commit them, they are
reducing their own credibility. That is something they will have to deal
with at some point. But people can recover from hoaxes and those who cannot
had some pre-existing problems...and perhaps SHOULD be living in a rubber
room.

You don't confiscate tens of millions of dollars worth of property because
someone's feelings were hurt. Try to get a sense of scale.

>I've always assumed safe harbour wasn't something officially set up... am I wrong?<

Yes, you're wrong.  The so-called "safe harbor" for indecent programming (NOT for obscene programming) is 10 PM to 6 AM, local time.  See 47 CFR �73.3999.

However, that will not protect anyone who programs scatalogical language, which is considered obscene, at any hour, since the Supreme Court has ruled that obscenity is not protected by the First Amendment.

You want to tell that to KWK in St. Louis, which got its licence revoked in 1965 after a case of contest fraud.  See Mark Roberts's history of KWK:

http://www.cosmos-monitor.com/hist/mid/kwk.html

But the fictional reporter would not be working for the station that ENCOURAGED the act in the first place.  WNEW didn't just stumble across news, they created it!  Big difference there.

And yes, Infinity knew who they were hiring.  The dynamically dumb duo moved to NY soon after the fiasco in Boston.  I blasted them at the time and they deserved it. I hoped maybe they learned their lesson, but apparently not. Personally, if there won't be a fine against Infinity, I'd love to see a fine against the dopes themselves.

The point is the reaction.  The tut-tut'ers are brought out to tut-tut.

Who would have guessed there were people who still thought of themselves
that way?

That makes it political speech, almost; to politically annoy the
moralizers-by-force-of-law.

I would be willing to bet that if a TV network televised an execution on an unauthorized basis, or put a camera in a bedroom and broadcast live sex, unedited, there would be more viewers than ever before in the history of television. There would also be a public outcry the size of Texas.

This country's schizophrenia knows no bounds. It can't resist a good auto crash or train wreck, but then decries violence and sensationalism. Prudish noses are perpetually up in the air, but sex scandals consume the attention of the public at large.

Radio stations do this because it gets attention. There is no such thing as bad publicity. The greater the righteous indignation, the better as far as the marketing people are concerned.

I have long since enjoyed watching the public squirm over "offensive" material!

Indecency is protected, but limited to "safe harbor" hours. Obscenity is not protected. Profanity falls in the "indecency" category in most cases.

I don't think you're going to see much come of this. It wasn't a contest like the ones that ripped up libraries because there was money in some of the books. It was a sex act in a tourist trap. The Cathedral has been the target of demonstrations and other incidents that happen at such places.

Understand that the Diocese of New York has often involved itself in political life of the city. It's more than a church and, as such, makes itself a target for all sorts of things.

I don't know who you are because you use a phony name. As a result I can't make a determination about how powerful or influential you would be in "blasting" anyone for anything. Are you so influential that Infinity would change anything based on your blasting of them? After all, Infinity has been blasted by the best of them and it rarely changes its direction as a result.

I believe the "talent" are protected by the corporation. They were hired to do what they did. It's the licensee who bears the responsibility for anything it airs. The "talent" were nowhere near the event. They lost very high paying jobs. It seems to me they've already been fined an amount far greater than the law would require.

The bottom line is that sex was performed in a religious institution, a place where, I'll bet, the employees and officials of that institution performed it often, usually with young altar boys. It seems awfully hypocritical for the Catholic church to condemn such activity. Finally, heterosexual activity in the church! This church has been rabidly anti-gay. They should be happy the copulating couple was straight.

It was in extremely bad taste, for sure. The reaction to it has been blown all out of proportion.

They pulled licenses in the case of Crowell-Collier (KDBW/KEWB/KFWB)
over faked contests.

I sincerely hope not. There is a lesson to be re-learned here.
Broadcasting is a Public Service, not a topless, lap-dancing bar.

>You want to tell that to KWK in St. Louis, which got its licence revoked in
>1965 after a case of contest fraud.  See Mark Roberts's history of KWK:

It says: Prizes in these contests, said the FCC, were not hidden until
late in the contest period and "consequently it was impossible for any
person to find the prize during a substantial portion of each period."

I don't see a correlation between the two. KWK was clearly fraudulent.
Copulation in the Cathedral was less a contest than a stunt.

Yeah, but 1965 was 37 years ago, and, as I recall, the FCC did not at that time have the authority to issue fines.  The only penalty was the death penalty (which often took years and years to "execute" 'cause the station has plenty of opportunities to try to refute the FCC charges and show that it was fit to continue to be a licensee.  I can think of only four or five license revocations ever--there were probably a few more.  KWK is one.  At least two others involved stations owned by a guy named Don Burden, KOIL in Omaha and, I think, a station in Indianapolis and one in the northwest.  So, in the pre-fine days, there were essentially two ways to lose a license. The FCC could revoke it (very, very rare), or a would-be licensee could cross-file against you at renewal time, claiming that he or she would be a better licensee that you.  Cross filings were and are extremely rare and almost never succesful.

The purpose of the fine authority is to provide the FCC with an enforcement weapon less severe than the death penalty and more fitting to the myraid "crimes" that a station might commit.  You see, a $20,000,000 fine (revocation of a major market license) for, say, obscenity or a dicey contest is, justifiably, seen by many as a tad severe.  Keep in mind, if the FCC slaps a straight revocation order on you, you are done, your investment is totally lost, you have nothing but your phsical plant to sell,  And it's worth zip compared to the license (and may, in fact, be worthless).

Best,

Don

I don't see how profanity falls under indecency.

Obscenity: the "7 dirty words" and derivatives of them.  Though no one seems to
care
about saying "piss" anymore.  I'm even hearing titty (which would deride from
"tits"
of the 7).

Profanity: calling the wrath of ANY given deity onto an individual.  ex: "god damn
you".  "Damn you" is still cool though.

Indecency: Tough to define, but easy to trigger.  Essentially anything considered
to
be explicit, or vulgar.  It changes with the times, but sex and violence seem to
be
the flagship.  The exceptions, of course, are when they are talked about for
educational reason.  If you've ever heard "Loveline" or a similar program on the
rare occasions where the doctor isn't present, it gets pretty tame.

>
> >
> Yeah, but 1965 was 37 years ago, and, as I recall, the FCC did not at that time have the authority to issue fines.  The only penalty was the death penalty (which often took years and years to "execute" 'cause the station has plenty of opportunities to try to refute the FCC charges and show that it was fit to continue to be a licensee.  I can think of only four or five license revocations ever--there were probably a few more.  KWK is one.  At least two others involved stations owned by a guy named Don Burden, KOIL in Omaha and, I think, a station in Indianapolis and one in the northwest.

Burden bribed a Congressman to get things expedited at the FCC. He lost KOIL in Omaha, WIFE in Indy, KISN in Vancouver/Portland and KBTR in Denver.

In the 60's as well, WGCB in Red Lion, PA, lost its licenses due to the licencee, Rev. Dr. Norris' refusal to obey the Fairness Doctrine. A daytime AM in South Carolina, on 1310 as I recall, ins a town called, maybe, Kingswood, lost its license due to fradulent billing. KRLA in LA lost its license due to owenrship rule violations. WOOK in Washington lost its license due to, among other things, allowing numbers rackets to use chapter and verse citations in religious programs to conduct illegal gambling operations. WFAB in Miami lost its license due to fraudulent billing and lack of candor.

Recently, the licensee of several IN and MO stations lost them due to a sex perversion conviction that rendered him unfit int he FCC's eyes to be a licensee.

There were others; I just can't remember them.

Most had to do with fraudulent billing, lack of candor and unfit character qualifications.

> So, in the pre-fine days, there were essentially two ways to lose a license. The FCC could revoke it (very, very rare), or a would-be licensee could cross-file against you at renewal time, claiming that he or she would be a better licensee that you.  Cross filings were and are extremely rare and almost never succesful.

Actually, there were a number of successful cross filings. WRSJ-FM in Bayamon, PR, was filed against in the late 70's for technical violations en masse and lost its license. The rulemaking following the filings on top of the Bonita Springs FM in the early 80's produced the relaxation of rules that allowed move-ins and upgrades of class without opening a filing window. There were maybe 20 filed agianst and lost licenses, most due to gross shortcomings of the licencee.

A lost but hard fought battle was over WOJO-Evanston, IL. A cross-filer claimed the spanish programming served Chicago, but not the city of license and was, anyway, not needed as much as his intended hard rock format. It took years to settle, and cost perhaps a half-million in lawyers' fees. I was an expert witness in that one, and jut one of the hearings went on for 10 days in Chicago with an FCC Administrative Law Judge present.

> over faked contests.

Crowell Collier divested, just as RKO radio did. The CC licenses were never pulled; they were sold. There were never any filings for the frequencies by new applicants... for example, Westinghouse bought KFWB form Crowell Collier and made it into a news staiton.

The CC problems, which were nmanagement related (billing, particularly) at KFWB, occured in 1959. They were cited in the FCC decision in 1960 to deny the sale of 1010 AM in NY to CC. At that point, the ocmpany started losing interest in radio, having sold the stations they had by around 1967.

I presume it is a typo, but the Mpls./St Paul station on 630 was KDWB.

The laws of the United States.  The regulations in place and already defined by the
FCC.   The laws of the states where the broadcasts occur.

Breaking those laws or violating the regulations already set in place should bring action.

Do you want me to spell it out any clearer?   I sense a serious comprehension problem here.

BREAK THE LAW AND  FACE THE PENALTIES.

The laws were (allegedly) broken.

> No, that is your rhetoric to attempt to discredit what I DID say. I say, in

There is no need for me to discredit anything you say.

Uh...yes I have.  Please quote the portion of the U.S. Constitution which
has the seperation of church and state of which you speak.  The First
Amendment states that the Congress shall make no law respecting the
"establishment" of religion.  That is not a total seperation of church and
state.  So please, tell us where you get that from.

John Higdon wrote:

> Indecency is protected, but limited to "safe harbor" hours. Obscenity is not protected. Profanity falls in the "indecency" category in most cases.

Profanity is neither obscene nor indecent. It has a very precise purpose and is finely calculated, in ordinary life.

Were there no taboo words, we would have to invent them again, so useful are they. Translations of taboo words are not taboo in other languages: each comes up with its own. The referents don't matter (unlike obscenity and indecency).

The most common purpose of profanity is to assert a certain relationship between speaker and hearer, that dispenses with formalities and may speak freely at any level at any time. It's _rude_ to take that liberty where politeness ought to prevail, and formalities should be respected.

That in turn makes it possible to be rude! And that's the use of profanity.

In the course of my career I've met several owners of topless,
lap-dancing bars. Believe me, they honestly believe they perform a
public service, too. Since their establishments were always full of
patrons, I have to believe they did..

I don't see the connection. Is any "profane" word on the "obscenity" list?
No? Then how is "profanity" "obscene"? As far as I know, profanity can
freely flow during safe-harbor time.

You'll have to come up with a better argument than that.

Much of what many like to call art and expression is really nothing more than an effort to offend.  They then justify it by saying exactly what you say: "The Point Is The Reaction."

The problem with this way of thinking is that it lacks boundaries and purpose.  If I get offended from their "Reactionary" art and I destroy the art that elicited my reaction, does my reaction become part of their art?  Do they deserve compensation for the very behavior they elicited from me?

To me, Free Speech should have a focus.  For example, NAMBLA, as repulsive and disgusting as I think they are, argues for a specific cause.  As such, I think they have a right to point out their opinion, no matter how much it offends me.

But when you say "The Point Is The Reaction."  You're basically admitting that there really is no other intended purpose for this expression besides offending someone.  This is what rides dangerously close to what is known in legal circles as "no redeeming value."  I think I could even make a case that declaring "The Point Is The Reaction" is the very definition of "no redeeming value."

>That makes it political speech, almost; to politically annoy the
>moralizers-by-force-of-law.

It's ALMOST political speech; but it's not.  Political speech has a point to make.  What point is made with an effort whose sole purpose is to annoy a group of people?  Where is the redeeming value?

Opie and Anthony's stunt rides awfully close to this standard.  I happen to think that the real perpetrators were the stupid listeners who exposed themselves in a church.  Yes, O&A encouraged obnoxious behavior, but they weren't specifically asking for anyone to expose themselves in a church.  That's the only reason they should be allowed to continue on the air.  Encouraging stupid behavior in what was intended to be funny and creative shouldn't be a crime.  Clearly they need to think about their delivery technique, but that's a matter of art...

I wonder about 700 Walkersville, MD, which is moving COL to Poolesville, MD, increasing to 25 kW DA-D aimed straight at Washington, DC, already changed its call to WGOP, and is building studios __IN__ Washington, DC.  There is clearly no intention to serve Poolesville, a smallish outer suburb a bit off to the side of their new pattern.  Their new transmitter location will be about 20 miles north of DC.

They have switched from Arabic to conservative talk plus Greaseman.  I doubt if there were more than 10 Arabic-speakers anywhere near their previous COL.

The same owner is working on moving WDVM 540 about 100 miles from the lower eastern shore on Maryland to be licensed to a crossroads between DC & Baltimore.  The transmitter location is to be the same as WGOP.  The reported intention is to move the talk from 700 to 540, since it would be full-time, though lower power.

But we all know that peripheral stations are generally aimed at the larger market, even though they use the fiction of "first local service" in obtaining their license. Certainly not news.

Probably in the early 90s, Imus somehow got a random topless bar
dancer being interviewed in the course of some man-in-the-street
excursion; she was a Columbia University political science major
and they talked Middle-East politics for the entire segment, perhaps
the nicest send-up of himself and Stern ever done.

Rich, that's a bit extreme, even for you.  You're saying in effect
that the market justifies the behavior.

Well then, using that as an excuse, what's wrong with selling
narcotics to minors?  There is a big market for this stuff, you know.
Do you have to believe that this is a public service just because the
market exists?

I tend to agree with your previous postings that nothing much will
come of O&A's show except perhaps a slight loss of advertising
revenue.  However, your position of "freedom of speech" is a long way
from "anything for money."  This is where your opinions and mine
diverge.

fiasco.

Leaving no nit unpicked, I believe that the Miami station was no longer WMYQ when the license was lifted for fraudulent contesting; Bartell had evolved into Charter and the station was then WMJX. The contest irregularities on WMYQ ("The Magnum contest") were dismissed with a warning in 1973, but about 3 years later, the station did a hoax about the whereabouts of jock Greg Austin who was "lost in the Bermuda Triangle."  This time the license went, with the Tucson KIKX missing jock contest being cited as precedent for revocation.

Well your argument is sound, but I'm sure Rich will wiggle out of it
somehow.

I didn't say profanity was obscene.
You said this in the message that I was reponding to:

Quote: "Profanity falls in the "indecency" category in most cases."

My point was no, it is not in the indecency category.  It is nether indecent
or obscene, it is profane.  Hence the regular use of the term "O.P.I".  You
have the 3 choices of obscene, profane, or indecent.

Bailey

>broadcast license".

It doesn't work that way. These people have been granted a special privilege allowing them to use the public airwaves. They hold no proprietary rights in their licenses; look at any broadcast station license and you'll find language stating exactly that. If the public, through its designated representatives, sees fit to withdraw that privilege it has the right to do so.

But as to specific rules, the indecency rule comes to mind. How many times has Infinity been fined for violations of that rule? Willful and repeated violation of FCC rules is sufficient grounds for revoking a license.

I'd like to see Infinity stripped of all its licenses. Make an example of 'em, and the others will start behaving like responsible adults.

umar

Maybe some station should broadcast that your entire family was killed by a
terrorist.............oh it just a hoax, don't worry. Your upset, gee maybe
you need a rubber room.

Oh ya.....so no rules on content........well lets throw the power rules out too while we're at it...........hell lets just nullify ALL RULES and do any damn thing we want!!! Ya thats the ticket.

Old-timers may disagree, but I'd have to say that if you want a good car radio for AM DX, you're about 20 years too late.

The first car radio I DX'ed with was a Delco mudmeister in the dash of my father's '68 Impala. It was pretty good in terms of sensitivity, selectivity, s/n, etc. The next one was also pretty good, an OEM Philco in my 1973 Galaxie 500. After that, it's been a waste of electronic-grade silicon. The new receivers suffer from poor image rejection, phase noise, capture ratios fat enough to fly an A380 thru, amongst other ills.

I'd like to invite comment on this from overseas, as well. Back in 1994, I had a Fiat Punto with a Becker LW/MW/FM radio ant one of those ultra-small antennas in the upper rim of the windshield, sort of like on the Ford Focus. I only got to DX with it one night from Normandie, and my best DX was Radio Monte Carlo!

Vince Cavaseno wrote:

> I was at the top of Cadillac Mt. in Acadia National Park with my trusty Sony 2010 spinning the dials in midday. I noticed a lot of noise from this rather old model, and remarkably unsatisfactory performance.
>
> However, when I went back to the car ('97 Ford Taurus with high end OEM AM Stereo/FM Stereo Cassette w/CD Changer), I was shocked and amazed at what came in. WFAN, WCBS, and (I believe) WOR with excellent readability and s/n ratio. FM results were also good. This lead me to the question: Has anyone seen any reports on what the best car radio for AM DXing is?
>
> The way the Taurus radio is physically formatted in that oval shape would seem to make it difficult to use outside of the car...then again, I haven't taken it out to see what it looks like.

To separate Government from Religion automatically necessitates the separation of said religion from the State. Not rocket science here.

What is missing is "context." The f-word can and is used outside the safe harbor in theproper context, such as a discussion of contemporary values and language. The same word can be indecent in a different context. The FCC has no list of "dirty words" but does fall back on "community standards" and context almost every time an indecency/obscenity issue is raised. There are definitions, albeit vague, on the FCC website under the Public's Guide to Broadcasting or somesuch.

In part, here is what it says:

Obscene speech is not protected by the First Amendment and cannot be broadcast at any time. To be obscene, material must have all three of the following characteristics:

a.. an average person, applying contemporary community standards, must find that the material, as a whole, appeals to the prurient interest;

b.. the material must depict or describe, in a patently offensive way, sexual conduct specifically defined by applicable law; and

c.. the material, taken as a whole, must lack serious literary, artistic, political, or scientific value.
Indecent speech is protected by the First Amendment and cannot be outlawed. However, the courts have upheld Congress's prohibition of the broadcast of indecent speech during times of the day when there is a reasonable risk that children may be in the audience. Broadcasts that fall within the definition of indecency and that are aired between 6:00 a.m. and 10:00 p.m. are subject to indecency enforcement action by the FCC. Indecent speech is defined as "language or material that, in context, depicts or describes, in terms patently offensive as measured by contemporary community standards for the broadcast medium, sexual or excretory organs or activities."

Profanity that does not fall under one of the above two categories is fully protected by the First Amendment and cannot be regulated.

Sometimes people need to be "offended" to get them off their posteriors. Age
has nothing to do with it.

Perhaps you can define "common decency". What was "decent" about the
molestation of hundreds of children? What was done to the organization whose
officials committed those acts? Why should broadcasters (who don't even try
to claim high moral ground) be treated more harshly?

WOCE 93.1 dropped the stereo some months ago and now its mono, along
with WGOW 102.3fm, but this is a talk station. WOCE doesnt sound that
loud, but it sounds with a lot of bass.
Are there any reasons for this?

Thanks

Amateur Radio Newsline™ Report 1306 August 23rd, 2002

Amateur Radio Newsline report number 1306 with a release date of
Friday, August 23rd 2002 to follow in 5-4-3-2-1.

The following is a Q-S-T.  Europe prepares for another ham in space and a
technology called AMBER Alert finds another kidnapped youngster.  These stories
and more are next on Amateur Radio Newsline report number 1306 coming your way

right now.

(Billboard Cart Here)

**
HAM RADIO IN SPACE:  BELGIUM TO LAUNCH HAM ASTRONAUT

Europe is about to launch another ham radio operator into space.  He is from Belgium and the QSL cards are already being prepared as we hear from Jeramy Boot, G4NJH:

--
Belgium's second astronaut to go into space is a radio amateur.  Frank De Winne, ON1DWN, will join the International Space Station at the end of October this year.  The exact timing of the flight is not yet available.

Gaston Bertels, ON4WF, who is Chairman of ARISS-Europe, has organized an amateur radio contact with the Belgian air force Royal Technical School. Bertels says that there may be other opportunities for operators to make contact with the mission as well. A full color QSL will be available.  QSL cards and listener reports should be sent either direct or via the bureau to ON7AQ.

Jeramy Boot, G4NJH.

--

More information will be made available as soon as a launch date is set. (GB2RS)

**

HAM RADIO IN SPACE:  BASS TO FLY

Another flight being watched is a Russian re-supply mission this October.  One that may carry a United States pop music star as the third space tourist to the ISS.

After weeks of squabbling, Russian authorities announced late last week that teen heart-throb Lance Bass of the boy-band 'N Sync will probably travel to the international space station after all.  Bass still has not paid any of the estimated $20 million for his flight but a spokesman for Russia’s  RKK Energia has also confirmed that plans for Bass' seat is being held for him and launch preparations are moving forward.

If Bass makes the trip to the International Space Station, he will become the youngest person ever in space.  This title has been held since 1961 by former Soviet Union cosmonaut German Titov who  was only 25 when he made his first flight.  Bass was born in 1979 and is currently 23.

At airtime, Bass’s sponsors have indicated that his every waking moment on orbit will be pre-planned.  This could mean no ham radio using the ARISS Amateur Radio station on board the ISS.  (ARNewsline™ from published reports)

**

EMERGING TECHNOLOGY:  UPS NOW NEUTRAL ON RFID TAGS

United Parcel Service now says it's neutral on a SAVI Technology's proposal to permit higher duty cycles than current Part 15 rules permit for Radio Frequency or RF ID tags.   These are tags used for tracking shipments and packages, among other applications. The ARRL has said that adopting SAVI's proposals would result in severe and harmful interference to Amateur Radio and has opposed the plan.

And the ARRL Letter now reports that UPS recently clarified its position in an ex parte filing to the FCC.  In its statement, the shipper said that it takes no position on the rule changes proposed in the SAVI Petition because they will have virtually no impact on U-P-S's shipping operations.  Also, that the requests are inconsistent with efforts to promote international standards for RF ID tags.  The change in position is highly significant because United Parcel Service has an equity interest in SAVI through its UPS Strategic Enterprise Fund.  (ARRL Letter)

**

EMERGING TECHNOLOGY:  AMBER ALERT SAVES ANOTHER KIDNAPPED CHILD

Some hams in California are looking at ways to tie their repeaters in after the states new AMBER Alert system has helped to safely locate yet another kidnapped youngster.  Nichole Timmons vanished from her bedroom in Riverside California on Monday night August 19th.  She was found the following afternoon in rural Nevada based on tips called in by motorists who recognized the description of the girl, her suspected abductor and the truck they were in.

A description was flashed on electronic road signs across several South-Western states as part of a multi-state alert.  At about 2:40 p.m. on August 20th, Nevada police spotted the girl's former baby-sitter, Glen Park, and Nichole driving through the Walker River Indian Reservation north of Reno.  A tribal police officer stopped the pair and Park was taken into custody.  Riverside Police Chief Russ Leach told reporters that the arrest came about because Nevada state police used their AMBER Alert system and received a tip from a passing motorist.

As previously reported, the AMBER Alert system is based on a program developed by Dallas-area broadcasters and named in memory of nine year-old Amber Hagerman who was kidnapped and murdered in 1996.  It uses a combination of two-way radio, telephones, fax and data communications to quickly spread word of a child abduction.  In theory it could also be interfaced to ham radio repeaters and packet networking systems.  More important, with Nichole Timmons return, the AMBER Alert system is now credited with safely recovering at least eighteen children since 1997.  (ARNewsline from news reports)

EMERGENCY COMMS:  REPORT SAYS NYC EMERGENCY RADIO SYSTEM FLAWED ON 911

Poor radio systems with no inter-operability contributed to the casualty count in New York City last September 11th.  This as a report on the aftermath of the terrorist attack targets the city's emergency radio system as not being adequate for the task that day.  Amateur Radio Newsline's Bruce Tennant, K6PZW, tells us what that report had to say:

--

The report was prepared by high ranking New York City department officials aided by the management consultant McKinsey & Co..  It found that the rescue effort while highly, successful was hurt by a failure of city departments to work together, poor organization and a faulty radio communications system.

The radio system caught a lot of criticism.  It was singled out as being the biggest problem after firefighters had entered the twin towers.

The report found that once inside, radio communications problems left many commanders and firefighters unable to communicate with each other.  To make matters worse, the fire department's radios were incompatible with the police radio system and vice-versa.  In other words, no inter-operability between police and fire and no direct radio communications between the two agencies.

New York City Mayor Michael Bloomberg has assured the city that the fire department's radios work properly in the future.  This, regardless of the cost of improving it.  Police are also considering opening the department's citywide system of repeaters to the fire department in order to help solve the communication problem for future joint efforts.

Even with the radio problems an estimated 25,000 people were evacuated from the twin towers that day.  Mayor Bloomberg calls it the most successful urban emergency evacuation in modern history.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW.

--

As widely reported, ham radio operators were among the first on the scene in lower Manhattan.  They operated using an array of their own equipment and networks providing communications to all who need it.  Hams and their gear performed almost flawlessly in the hours, days and weeks following the September 11th terrorist attacks.  (ARNewsline™ from published news reports)

**

## ENFORCEMENT: TAKE THAT LINK OFF THE AIR

The FCC has ordered a Los Angeles area ham to get coordinated or remove a repeater link from the air. Daryl Duckworth of the agency's Consumer and Governmental Affairs Bureau explains the action taken:

--

Duckworth: "We issued a letter to Leobardo Coronado, KC6PXL, of Sun Valley California, ordering that on receipt of this letter to KC6PXL, that an uncoordinated repeater link must be shut down until either coordination is obtained or a detailed plan is submitted that will prevent interference to a coordinated repeater operating on the link frequency."

--

Coronado was warned that his failure to shut down the uncoordinated link will result in enforcement action that could include license revocation and a monetary forfeiture of up to $7,500. (FCC, RAIN)

**

## WITH THE FCC: FCC UNIVERSITY" LAUNCHED - CONTINUING LEARNING FOR THE FCC STAFF

The Federal Communications Commission has launched what it calls FCC University. This is a new program to ensure that FCC staff members have the cutting edge knowledge and skills to respond to the challenges of the communications field in the 21st century.

According to the CGC Communicator, FCC employees can choose from a vast array of courses on generally applicable subjects. There are also sections of FCC University that are specifically geared to meet the educational needs of engineers, economists and
lawyers working for the agency. Complete information on FCC University is on the web at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-225430A1.doc (CGC Communicator, FCC)

**

## CONVENTIONS & HAMFESTS: BIG BUSINESS IN HUNTSVILLE

In news from the ham radio business world, last weekends Huntsville Hamfest in Alabama may have signaled a turn-around for those who make their living selling ham radio gear. And that's good news for more than just Amateur Radio.
David Black, KB4KCH, reports:

--

While a great deal of the world's Amateur Radio equipment is manufactured in Pacific Rim countries, most of it is sold right here in the United States. The majority of sales are by family-run businesses. And as the U-S economy sagged so did ham gear sales. Slow sales meant the end for some businesses. Others struggled to survive. Now, there appears to be a turnaround with word of a fantastic sales weekend at the Huntsville Hamfest in Alabama. How good was it? Chip Margelli, K7JA sells equipment for Vertex-Standard:

--
Margelli: “Well, it has been a great show this weekend. The crowd was very active, especially Saturday morning and early afternoon. Sunday has been busier than normal and we have had great weather and a good turnout. A lot of boxes have been going out there door and there has been a lot of interest in the new products.”
--

Good sales aren’t the only encouraging news at Huntsville. Event organizers are thrilled at other figures—the number of people attending. While the exact gate figure was not yet available, Hamfest General Chairman Scotty Neustadter, W4WW says it could be a near record year.

--
Neustadter: “I was a little bit hesitant to think that myself. I try to error on the side of caution. But I was very, very pleased and I am thinking that we are definitely up from last year and the year before. The attendance would be a record for a Huntsville Hamfest with the exception of the year that we were the ARRL National.”
--

Neustadter’s enthusiasm is echoed by Todd Mowery. He’s with ATOC, the company distributing Alinco ham gear. Mowery says Saturday was especially good.

--
Mowery: “Oh, I thought it was a very good weekend. Saturday was very crowded. Very impressive.”

“I enjoyed it a lot. The booth was busy. We have quite a few new products over the last year that we put out -- mostly in the HT realm. And they have done really well for us. And the crowd that showed up yesterday enjoyed seeing those new radios.”
--

The most succinct evaluation of Huntsville probably comes from Gary Green, N4CJX, of Ten-Tech, who needs few words to describe how he feels about this Hamfest:

--
Green: “We love Huntsville.”
--

Green says Ten-Tec will be back next year. Just about everyone else is saying they will, too.

>From the Amateur Radio Newsline Southeast Bureau in Birmingam, I’m David Black, KB4KCH.

--

One more word about this years Huntsville Hamfest. It concerns the D-X Banquet. Bill Hall, W4GBF, was one of the banquet planners. He tells Amateur Radio Newsline that for the first time in its history the banquet had more people want to attend than there were seats available. Hall could not talk with us very long. He was out scouting up extra seating. More on Huntsville a bit later in this weeks newscast. (ARNewsline™)

**

CONVENTIONS & HAMFESTS: ARRL IN SOCAL

Successful ham radio conventions are not limited to Alabama. Information out of California indicate that the Southwestern Division Convention was also a success. Reports from San Diego say that there were plenty of vendors doing a brisk business and all of the forums were jammed packed. We spoke with Gordon West who was on the roof doing antenna work. He was one of the presenters at the convention and Gordo says it was two thumbs up show:

--
West: “I’m up on the roof doing ATV antenna work and ATV as well as emergency preparedness was one of the many topics that we talked about at the Southwestern Division Concention. And boy-oh-boy was it busy. The aisles were packed on Saturday morning all of the way through Saturday evening and the outside exhibits of the emergency communications vehicles were well attended”
--

Highlights included the FCC’s Riley Hollingswoth, K4ZDH, hosting a two-hour enforcement session and Bob Heil, K9EID, presenting his famed audio conference. One source tells Amateur Radio Newsline that there were about 1500 people who made the trek to San Diego for this show. (ARNewsline™)

**

YOUTH IN HAM RADIO: 2002 YHOTY AWARD PRESENTED TO KB3GWY

Saturday August 17th was a special day for a Reading Pennsylvania teen. That’s when seventeen year old Josh Abramowicz, KB3GWY, became the 2002 Young Ham of the Year. Amateur Radio Newsline’s Don Wilbanks, KC5MFA, was at the Huntsville Hamfest where the presentation was made:

--

Abramowicz: “I share the enthusiasm of my colleagues at home when I say that ham radio extends many, many opportunities to the youth of America. There are

many young people in our country that take an interest in our great hobby. Unfortunately, there are those who have not heard or seen our hobby and I believe that it is a great thing to spread our hobby as far, as wide and as much as we can.”
--

That’s 17 year old Josh Abramowicz, KB3GWY, as he accepted the 2002 Amateur Radio Newsline Young Ham of the Year Award. Abramowicz was honored for his work in promoting Amateur Radio in and through the Boy Scouts of America. He says that its important to let other kids know about ham radio.

--
Abramowicz: “The youth of America are interested, but in to many cases they never see any of the action that our hobby provides. Therefore, I think it is our job -- young and old -- to do our best to pass our hobby on to the next generation and this can be done in a lot of ways.”
--

Abramowicz went on to detail how this can happen:

--
Abramowicz: “I've done it through Venture Crews. There are also many other ways. There is youth groups, families promoting Amateur Radio to the youth in your neighborhood. They are the future of Amateur Radio. Much like a lot of our radios and a lot of our equipment, all it needs is one spark.”
--

And after receiving his gifts from Amateur Radio Newsline, Vertex-Standard and CQ Magazine, KB3GWY turned the tables with a special gift of his own:

--
Abramowicz: “I have here a couple of patches from the K2BSA station from the National Jamboree. These are limited edition patches with “Radio Scouting” written on it. There is K2BSA and it has the world symbol for Scouting. First of all I would like to present one to Mr. Bill Pasternak for his kind generosity. I’d like to give one to Chip from Yaesu for his kind generosity also the gentleman from CQ.”
--

Josh then donated his major gift from Vertex Standard -- a Yaesu FT-817 to the Boy Scout Venture Crew he is involved with:

--
Abramowicz: “I just want to say that the equipment will be going to the Venture Crew and the future efforts of our Venture Crew working with youth and getting them on the air. So thank you. (applause)
--

And Amateur Radio thanks Josh Abramowicz, KB3GWY, for being another excellent example of ham radio youth at its very best.

For the Amateur Radio Newsline, I’m Don Wilbanks, KC5MFA.

--

Want to hear more? Well you can. We have the entire 13 minute ceremony posted as this weeks Newsline Extra. Just go to www.arnewsline.org and click on this weeks newscast number at the top of the main page. (ARNewsline™)

**

INTERNATIONAL-UK: BIG UK 5MHZ EXPERIMENT FOLLOW-UP

The British 5 MHz propagation study using Amateur Radio is picking up speed. This as an increasing number of U-K hams apply for a Notice of Variation or N-O-V to let them take part. Once again, from Nottingham in the U-K here is Jeramy Boot, G4NJH:

--

During the first few days of the 'Fivemegs Experiment' a large number of NoV holders have made contacts with each other across the UK. Radio amateurs in other countries are showing great interest in this experiment, but we must make it absolutely clear that this has been authorized in order that we may carry out propagation investigations, antenna experiments and some emergency radio training within the UK. At the present time a very small number of US radio amateurs are authorized to conduct similar experiments under the group call sign WA2XSY. We know of no other amateur stations outside the UK who have any authority to call in. Jeramy Boot, G4NJH.

--

More on the British 5 MHz experiment in future Amateur Radio Newsline reports. (GB2RS)

**

INTERNATIONAL - CANADA: NEW VE5 SM

>From our friends up North comes word that Bruce Donovan, V-E-5-N-D was recently re-elected Radio Amateurs of Canada Section Manager in the Saskatchewan Section. This, for a two-year term that will begin on November 1st. Donovan ran unopposed eliminating the need for a balloted election. (RAC)

**

INTERNATIONAL - JAPAN: HAM-FAIR TOKYO

The 24th and 25th of August, saw one of the world's largest ham radio shows takes place in Japan. It’s the Amateur Radio Festival better known as the Ham Fair and was slated for the giant Tokyo Exhibition Center. Last year Ham Fair attracted over 35,000 visitors. (JARL)

**

DX

In DX, K3TKJ is active on 40 to 6 meters as C6ALW from Andros Island in the

Bahamas. He is there until the 18th of September and activity is mainly on SSB, but with some CW on 6 meters. (GB2RS)

HF98JP is a special event call sign activated by SP9HWN through the 31st of August to celebrate the visit of Pope John Paul the Second to Poland. The station is active on 80 to 6 metros CW, SSB, RTTY and PSK31. QSL as directed on the air. (Modern DX)

**

THAT FINAL ITEM: LICENSE DRIVE

And finally the story of a license drive. Not a campaign to get people their ham license. Rather the tale of one determined applicant who could not wait. It took place down-under as we hear from Q-News Graham Kemp, VK4BB:

--

Here's an amazing story of amateur enthusiasm that must be one for the record books. After many years of trying, Roscoe VK3TPJ was overjoyed on receiving news of his pass in CW. After all Roscoe has had a well-equipped HF station for years but hasn't been able to use it without supervision.

So enthusiastic was our Roscoe that waiting for the call sign in the mail was not for him. So he immediately jumped in his Falcon and drove 1000K up to Sydney to visit the ACA in person. He arrived at around 5am and waited a few hours for the office to open.

When it did, he was told he needed a passport photo to stick onto his new certificate. Undaunted, he went downstairs to an instant photo machine at Wynyard Station. Five minutes later he was back, photo in hand. Another five minutes elapsed and Roscoe was VK3KRH - authorized to operate on all amateur bands. The task achieved, he got in his car and drove straight home again - after just four hours in Sydney and a round trip of approximately 2000 kilometers!

--

Congratulations to the new VK3KRH. You can catch up with him on 160 meter AM during the morning hours. (Q-News)

That if you hold a radio license and act irresponsibly, and/or break the
law,  the license for that radio station can be revoked?

And your investment (or your investor's investments) hit the crapper?

To which I can only add, sarcastically,  as many morning people would ---

"duhhhhh"......

This stuff happened in the 60's and 70's, too. Finding a spur, a mixing product, harmonic or such is one of the harder things. It does not show up on required monitoring equipment, and most stations don't have a spectrum analyzer (have you priced an FM one lately?).

Usually, this stuff is reported by listeners. Or other stations. Usually, it gets corrected fast. Always been that way, too.

Probably not too many people remember that stations had to have their frequency monitor calibrated against an external monitoring service. Many rural and small market AMs had no local service available to them, so they went on the air after midnight with test tones to be checked by a service that was often a thousand miles away! Puerto Rico stations were checked in Florida, for example. It required that the CE get up one morning a month to do a half-hour frequency check,a nd a repeat if DX conditions were bad.

Perhaps. But the issue was that the parent corporation broke a veritable
panoply of US laws in its dealings abroad.

Perhaps, they should have been more controlling over their on-air content in the past, however, they have taken matters into their own hands by releasing O&A and suspending two of their managers.  There is certainly no need for the government to intervene.

I think imposition of a penalty of some type on Infinity is necessary.   Send a message to all broadcasters - this excrement has to stop.

A year or so ago,  I argued that the station they were fired from in Boston (actually, suburban station) should be penalized,  and some took to defending their behavior.   But what they did in Boston - an out and out broadcast hoax -- the FCC probably did nothing.

Asinine defenses of their behavior were put in this newsgroup.   Someone argued that it wasn't a hoax (oh?  declaring that the mayor of a big city had just been killed in a car crash isn't a hoax? .... OK.....), someone said I didn't understand the law.

As a citizen,  I have always felt that holding a broadcast license is a privilege, revocable if abused or if used for or to promote illegal activity.

I'm not going to engage in arguments over this,  but I knew that after the Boston mayor hoax,  and the fact that they found other employment immediately, and the station incurred no penalties, that this would happen again.

All I can say is,  I TOLD YOU SO.

This isn't a war zone. There's no enemy army, navy, or air force. Congress has made no declaration of war.

What we have instead is government run amok, people the American people never elected, trampling on our rights and liberties. There has been one act of terror carried out by a few desperados, much like Oklahoma City a few years ago. That does not make a war.

There's no justification for imposing government ID cards, and the invasion of privacy that accompanies them, on people in radio and television. The most logical conclusion is that the government wants to have a say as to who is, and is not, allowed to work in radio or television, and that it will eventually use this power to influence what is said and heard.

WNIR(FM) 100.1 Kent/Akron, OH (within listening range of our moderator, by the way) is a talk station that's had the stereo off even *before* it became a full-blown talker. I'm pretty sure I heard the strains of Grover Washington Jr.'s "Just the Two of Us" getting swallowed by the station's awful processor in glorious mono.

There's a rumor that the processor has been replaced, and WNIR did sound a little better last time I was in the Akron area...but the pauses between Joe Finan's (PMD talk host) words brought up all the background noise...so they must still have to tweak it.

But yes...mono, and has been for something on the order of 25-plus years.

Mike

There are two (maybe 3) rim shot FM stations in the DFW area that broadcast in mono.

KESN 103.3 (ESPN Radio)
KWRD 100.7 (Christian Talk)
and maybe KTDK 104.1 (Simulcast of KTCK 1310 - The Ticket - sports)

The lack of stereo definitely helps in the reception of these stations in the Dallas area.

Arnold

How many of those "frequency monitoring services" really measured the frequency ?

I remember a PPOE which subscribed to such a service ....every month we would get a "measurement report" --- it was pretty amazing....they read the frequency of our FM & TV xmtrs more than once while they were off-the-air for one reason or another.

Fortunately, digital frequency counters and rubidium standards became rather commonly available....obviating the need for patronizing that scam any longer.
